Bansilal Ramnath Agarwal Charitable Trust's Vishwakarma Institute of Information Technology, Pune-48 (An Autonomous Institute affiliated to Savitribai Phule Pune University)

Curriculum for Final Year B. Tech (Mechanical Engineering) 2020 Pattern

## Department of Mechanical Engineering

## VISION

Excellence in Mechanical Engineering for Global Acceptance

## MISSION

- Make spirited mechanical engineers with morals, values and principles for sustainable development of society.
- Strive continuously to impart knowledge and skills of the highest standards.
- Our engineers will respond to the current and future needs of the industry, higher studies as well as research.

## **Program Educational Objectives:**

- 1. Graduates of the program will become competent engineers suitable for the mechanical engineering based industry and higher education.
- 2. Graduates of the program will acquire the necessary foundation in fundamental mechanical engineering subjects for development of mathematical and analytical abilities.
- 3. Graduates of the program will acquire the knowledge and skills in mechanical engineering to provide technological solutions.
- 4. Graduates of the program will learn managerial, financial and ethical practices such as, project and financial management skills, multidisciplinary approach and soft skills.
- 5. Graduates of the program will respond to growing demands of society through lifelong learning.

## **Program Outcomes:**

At the end of the program, a student will be able to

- **1. Engineering knowledge-** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- 2. **Problem analysis-** Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences
- **3. Design/development of solutions-** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations
- 4. Conduct investigations of complex problems- Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- **5.** Modern tool usage- Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

#### BansilalRamnathAgarwal Charitable Trust's

Vishwakarma Institute of Information Technology, Pune-48

(An Autonomous Institute Affiliated to Savitribai Phule Pune University)

## **Department of Mechanical Engineering**

- 6. The engineer and society- Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- **7. Environment and sustainability-** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
- **8.** Ethics- Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- **9. Individual and team work-** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- **10. Communication-** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
- **11. Project management and finance-** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- **12.Life-long learning-** Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change

## **Program Specific Outcomes-**

At the end of the mechanical engineering program, a student will be able to-

- 1. Identify, automate and apply manufacturing processes for production of mechanical components considering effective use of man, machines, and material resources.
- 2. Design, formulate, develop and analyze mechanical components and systems using design engineering principles and modern CAD/CAE tools
- 3. Specify, analyze, evaluate, audit, design and build thermal and fluid systems using modern engineering tools

## **Department of Mechanical Engineering**

## Professional Elective-IV Finite Element Analysis (MEUA40201A)

Teaching Scheme		Examination Scheme								
Credits : 2	CIE	ISE	SCE	ESE	PR/OR	TW	Total			
Lecture (L) : 2 hrs./week										
Tutorial (T): hr.	20	30	20	30	25	-	125			
Practical (P): hrs./week										

#### **Prerequisite:**

Engineering Mechanics, Strength of Materials, Design of Machine elements, Engineering Mathematics, Heat Transfer, Dynamics of Machinery, Fundamentals of Programming Language

#### **Course objectives:**

- To understand the general procedure and philosophy of Finite Element Method as applied to solid mechanics and thermal analysis problems.
- To familiarize students with the displacement-based finite element method for displacement and stress analysis and to introduce related analytical and computer tools. It provides a bridge between hand calculations based on mechanics of materials and machine design and numerical solutions for more complex geometries and loading states.
- To study approximate nature of the finite element method and convergence of results are examined

## **Course Outcomes:**

Upon completion of this course, the student will be able to:

- 1. Understand the concept of finite element method and formulate element stiffness matrix for 1D bar element.
- 2. Analyze truss and beam element to solve for displacements and stresses.
- 3. Obtain finite element formulation for two-dimensional plane stress and plane strain problems using constant strain triangle (CST) elements.
- 4. Use concepts of isoparametric quadrilateral and higher order elements in finite element formulation for 2D problems and solve numerical integration using Gaussian quadrature.
- 5. Solve finite element equations for 1D steady state heat conduction and convection problems in heat transfer using Galerkin weighted residual method
- 6. Formulate and solve dynamics problem using finite element method

## **UNIT 1: Fundamentals Concepts of FEA**

Introduction to FEA, 1D Bar Element: Finite element formulation of 1D linear bar element using Direct Stiffness Approach - shape functions, element stiffness matrix, force terms, assembly of global stiffness matrix and load vector, treatment of boundary conditions- elimination approach, calculation of nodal displacement, strain and element stresses, properties of stiffness matrix, Numerical Examples.

## **UNIT 2: Plane Truss and Beam Elements**

Analysis of Truss Element: Element Stiffness Matrix, Direction cosine, assembly of global stiffness matrix, element strains and stresses, Numerical Examples.

Analysis of Beam Element: Hermite Shape function, element stiffness matrix, element load vector, Numerical Examples.

#### **UNIT 3: 2D Elements**

Two-Dimensional Stress Analysis: Plane Stress/Strain problems in 2D elasticity, constitutive relations Constant Strain Triangle (CST), Displacement function, Pascal's triangle, compatibility and completeness requirement, geometric isotropy, solving for primary variables (displacement), stress calculations

B. Tech (Pattern 2020)

#### BansilalRamnathAgarwal Charitable Trust's

Vishwakarma Institute of Information Technology, Pune-48

(An Autonomous Institute Affiliated to Savitribai Phule Pune University)

## **Department of Mechanical Engineering**

#### **UNIT 4: Isoparametric Elements & Numerical Integration**

Concept of isoparametric elements, Terms Isoparametric, super parametric and subparametric, Coordinate mapping - Natural coordinates, higher order triangular and quadrilateral elements (Lagrangean and serendipity elements), Uniqueness of mapping - Jacobian matrix.

Numerical integration –Gauss Quadrature in 1 & 2 dimension, Order of Gauss integration

#### **UNIT 5: 1D Steady State Heat Transfer Problems**

Introduction to Galerkin weighted residual method, One dimensional steady-state heat transfer problem-Governing differential equation, Finite Element formulation using Galerkin's approach for composite wall and thin Fin , Essential and natural boundary conditions and solving for temperature distribution

## **UNIT 6: Dynamic Analysis**

Types of dynamic analysis, General dynamic equation of motion, lumped and consistent mass, Mass matrices formulation of bar, truss and beam element.

Undamped-free vibration- Eigenvalue problem, Evaluation of eigenvalues and eigenvectors (characteristic polynomial technique),

#### **Text Books:**

- 1. Chandrupatla T. R. and Belegunda A. D., Introduction to Finite Elements in Engineering, Prentice Hall India, 2002
- 2. Finite Element Analysis, G Lakshmi Narasaiah, B S Publications, 2008.
- 3. Text book of Finite Element Analysis, P., Seshu, PHI Learning Private Ltd., New Delhi

#### **Reference Books :**

- 1. Finite Element Procedures, Bathe K. J., Prentice-Hall of India (P) Ltd., New Delhi.
- 2. Concepts and Applications of Finite Element Analysis, R. D. Cook, et al. Wiley, India
- 3. Finite Element Method using MATLAB, Kwon Y. W., Bang H., CRC Press, 1997
- 4. MATLAB Guides to Finite Elements- An Interactive Approach, Peter Kattan, Springer, 2008.
- 5. Finite element analysis, theory and application with Ansys, S. Moaveni, Prentice Hall
- 6. The Finite Element Method and Applications in Engineering Using Ansys, Erdogan Madenci and Ibrahim Guven, Springer, 2006.
- 7. Fundamental of Finite Element Analysis, David V. Hutton, Tata McGraw-Hill
- 8. Practical Finite Element Analysis<sup>I</sup>, Gokhale N. S., et al., Finite to Infinite, Pune, 2008. Finite Element Method with Applications in Engineering, Y. M. Desai, T. I. Eldho and H. Shah, Pearson Education, 2011
- 9. A First Course in the Finite Element Method, Daryl L. Logan, 2007.on, Tata McGraw-Hill,

#### Self-Assignments :

- 1. Computer program for stress analysis of 1D bar using linear elements.
- 2. Computer program for stress analysis of 2-D truss subjected to plane forces
- 3. Computer programs for modal for 1-D beam (simply supported or cantilever beams)
- 4. Computer program for 1-D temperature analysis
- 5. Static stress concentration factor calculation for a plate with center hole subjected to axial loading in tension using FEA software.
- 6. Modal analysis of any machine component using FEA software.
- 7. Stress and deflection analysis of any machine component consisting of 3-D elements using FEA software.

Guidelines for Laboratory Conduction

- Minimum 08 numbers of Experiments/Assignments shall be completed.
- Open-source software, simulation tools may be used wherever required.

## List of experiments:

The student shall complete the following activity as a Term Work:

- 1. Tool path generation and simulation for Turning, and drilling using suitable software
- 2. Tool path generation and simulation for Grooving and Threading with help of software
- 3. Tool path generation and simulation for Milling Facing, Pocketing. with help of software.

4. Tool path generation and simulation for Milling Contouring and drilling, etc.

with help of suitable software

- 5. Generate Bill of Material (BOM) from Assembly and other data using CAD Software.
- 6. Prepare Computer Aided Process Plan for selected part using variant type of CAPP Software.
- 7. Use MRP (Material Resource Planning) Software for CIM and Assembly.
- 8. Generate Part Family Code for a machine component using OPITZ Method

9. Study FMS system from Video clip and identify various elements of FMS and its controlling by computer.

10. Modeling and Simulation of Computer Integrated Manufacturing System. (VLab IIT, Kharagpur OR comparable sources)

11. Machine vision based quality control. (VLab IIT, Kharagpur OR comparable sources)

12.Remote Monitoring and Operation of a Computer Integrated Manufacturing System. (VLab IIT, Kharagpur OR comparable sources

13. Industrial visit based on Industry 4.0/Digital Manufacturing/CIM.

Prepared by: Prof.A. A. Somatkar

**BOS Chairman:** 

B. Tech (Pattern 2020)

## Professional Elective-IV

**Design of Heat Exchangers (MEUA40201C)** 

Teaching Scheme	Exami	Examination Scheme								
Credits:4 Lecture (L): 3hrs./week	CIE	ISE	SCE	ESE	PR/OR	TW	Total			
Tutorial (T): hr. Practical (P): 2 hrs./week	20	30	20	30	25	-	125			

**Prerequisite:** Readers/students are expected to know all topics of basic engineering science courses in thermodynamics, fluid mechanics and heat transfer.

## **Course Objectives:**

- To understand different kinds of heat exchangers, their working and applications
- To familiarize with different standards of heat exchangers design
- Students will able to understand different methods of heat exchanger design

## **Course Outcomes:**

After successful completion of the course Student will be able,

- 1. To classify different types of heat exchangers and select as per the applications
- 2. To analyze sizing and rating of heat exchangers with different methods
- 3. Understand the different shell and tube heat exchanger design standards and apply the knowledge for the design of shell and tube heat exchanger
- 4. To analysis different heat transfer enhancement techniques and calculate the heat transfer arte and pressure drop
- 5. To formulate the sizing and rating of exiting Plate Fin Heat Exchanger
- 6. To understand physics of multiphase heat transfer and apply it for different applications

## **Unit I: Basics Heat Exchangers**

Heat exchange mechanism, Classification of Heat Exchangers, Construction and working of tubular, Plate and Compact heat exchangers. Selection of heat exchangers, Applications of heat exchangers in different areas. Introduction to cryogenics heat exchanger.

## Unit II: Design of Heat Exchangers

Introduction to thermal and hydraulic aspects, Pressure drop and heat transfer considerations, Sizing and rating of heat exchangers. F-LMTD and NTU method.

## Unit III: Shell and Tube Heat Exchangers

Basic components, Types of shell and tube heat exchangers, TEMA standards, Basic design methodology, Heat transfer and pressure drop calculations, Shell side calculations-KERN,s and Bell Delaware method.

## **Unit IV: Compact Heat Exchangers**

Heat transfer enhancement, extended surfaces, Plate fin and tube fin heat exchangers- Applications and construction. Heat transfer and pressure drop calculations.

## **Unit V: Plate Fin Heat Exchangers**

Plate fine heat exchangers- Types and applications, Construction and fabrication, Flow arrangement and design of PFHE.

## Unit VI: Phase Change Heat Exchangers

B. Tech (Pattern 2020)

BansilalRamnathAgarwal Charitable Trust's

Vishwakarma Institute of Information Technology, Pune-48

(An Autonomous Institute Affiliated to Savitribai Phule Pune University)

## **Department of Mechanical Engineering**

Introduction to evaporators and condensers, construction, working, design and operational considerations and thermal analysis.

## List of Practical:

- 1. Basic design methods and tube heat exchangers
- 2. TEMA standards and applications to STHEX
- 3. Analysis of shell & tube heat exchanger using different methods
- 4. Thermal Analysis of compact heat exchangers
- 5. Analysis of plate fin type heat exchangers
- 6. Fouling analysis of heat exchangers
- 7. Trial on heat pipe to determine performance parameters
- 8. Industrial visit to heat exchanger manufacturing company

#### **Text Books:**

- 1. Heat Transfer by F. Incropera and D. DeWitt or other basic undergraduate heat transfer textbook.
- 2. Kakac, Sadik, Hongtan Liu, and Anchasa Pramuanjaroenkij. *Heat exchangers: selection, rating, and thermal design.* CRC press, 2012.R K Shah, Fundamental of Heat Exchanger Design
- 3. Kay Kays and London, Compact heat exchanger, Krieger Pub Co,., 1998

#### **Reference Books :**

- 1. Fundamentals of Heat Exchanger Design -Ramesh K. Shah, Dusan P. Sekulic, Wiley-India
- 2. Heat exchanger, Design, rating and Selection, Sadik Kakac, CRC Press
- 3. Process Heat Transfer/D. Q. Kern/ TMH
- 4. Heat Exchanger Design/ A. P. Fraas and M. N. Ozisick/ John Wiely& sons, New York.
- 5. Heat Exchangers Thermal Hydraulic Fundamentals and Design by S. Kakac, A., Bergles, F. Mayinger, McGraw-Hill Book Company.

## Professional Elective-V Noise Measurement and Control (MEUA40202A)

Teaching Scheme	Exami	nation Sc	heme				
Credits:3	CIE	ISE	SCE	ESE	PR/OR	TW	Total
Lecture (L): 3hrs./week		IDE	Bel	LDL	I IV OIX	1.11	Total
Tutorial (T): hr.	20	30	20	30	_	25	125
Practical (P): hrs./week	20	50	20		25	125	
Prerequisite: Applied Mathema	tics, Theo	ry of Mac	hines ,Dy	namics o	f Machiner	y, Mecha	inical
Vibrations.							
Course Objectives:							
1. To know the fundamentals	of acousti	cs and Inc	lian standa	ards of N	oise		
2. To know the sound absorbing	ng materia	als and its	practical	applicatio	ons.		
3. To know the measurement a	and contro	ol techniqu	ues of vib	ration and	l noise.		
4. To understand the effect of	noise on l	numan coi	mfort and	environn	nent.		
Course Outcomes:							
Upon completion of the course, st	udents wi	ll be able	to				
1. Illustrate the fundamentals	of sound	propagati	ion and ef	fect of no	oise.		
2. Classification of various set	ound mea	surement	instrumen	ts.			
3. Analyze the important tech	nniques us	sed for no	ise measu	rement.			
4. Categorize the different so	-						
5. Analyze the performance of	of muffler	and acou	stic mater	ial.			
		1					

6. Interpret the importance of noise regulations.

## Unit I: Fundamental of sound

Introduction to Sound, Sound propagation, Quantification of sound- frequency and wave length ,Sound levels and decibels, sound power level sound pressure level, Sound intensity level, Octave & 1/3 octave bands, A weighting, Sound field, Sound reflection ,absorption and transmission - concept & governing equation with correlation of each other, Loudness. Introduction to noise, Noise induced hearing losses.

## Unit II: Noise measurement and instrumentation

Noise measuring instruments- microphones, types of microphones Sound pressure measurement, Sound power measurement, Sound intensity measurement, Measurement of sound transmission loss ,sound level meter, sound frequency analyser, noise dosimeter, recorder, calibrators. Sound intensity probes, Acoustic exciters, Data acquisition system, Digital signal processing, sampling, aliasing and resolution.

## Unit III: Noise Source Identification and Analysis

Introduction to anechoic chamber and reverberation chamber, , Frequency and order domain analysis, Sound intensity and sound power mapping ,Introduction to array techniques - Acoustic holography & beam forming.

## Unit IV: Major source of noise- Automotive and non-Automotive

Major Sources of noise, noise due to construction equipment and domestic applications, Interior Noise of Automobiles - Interior noise sources, Structure borne noise, airborne noise. Industrial noise, industrial noise control- strategies, noise control at the source, noise control at the path, Acoustic barriers, noise control at the receiver. Active noise control techniques.

## Unit V: Passive Noise Treatments

B. Tech (Pattern 2020)

#### BansilalRamnathAgarwal Charitable Trust's

Vishwakarma Institute of Information Technology, Pune-48

(An Autonomous Institute Affiliated to Savitribai Phule Pune University)

## **Department of Mechanical Engineering**

Ducts & Mufflers – Types of mufflers, performance parameters – acoustics and backpressure, Reactive and absorptive silencers and Overall design considerations.

Acoustic Material Characterization – Sound transmission, absorption and damping, Behaviour of acoustic material with respect to sound absorption and transmission, Standard methods for evaluating sound absorption coefficient and transmission loss, Types of sound absorbers, Prediction of transmission loss and flanking transmission, Damping materials and their applications.

#### Unit VI: Noise Regulations

Non auditory and auditory effect noise on human beings, Noise standards and limits in India, Ambient emission noise standards in India, Hazardous noise exposure – legal aspects, Day night sound level ,Noise specifications for automotive vehicles – pass-by & stationary and Noise specifications for generator sets, fire crackers and household articles, warning devices.

## List of Practical:

- 1. Measurement of noise parameters like frequency, sound pressure level (dB) of any system by using microphone.
- 2. Noise Measurement & analysis using appropriate instrument. Analysis of SPLsignature using any analysis software package
- 3. Determination of Airflow resistivity of foam material using Airflow resistivity instrument
- 4. Determination of sound absorption coefficient of acoustic material by using impedance tube

5. Determination of transmission loss of reactive silencer by using impedance tube.

#### Assignments:

1) Determination of gear noise- numerical

2) Determination of fan noise- numerical

## Department of Mechanical Engineering

## Professional Elective-IV Reliability Engineering (MEUA40202B)

Teaching Scheme		Examination Scheme										
Credits : 4	CIE	ISE	SCE	ESE	PR/OR	TW	Total					
Lecture (L) : 2 hrs./week												
Tutorial (T):	20	30	20	30	25	-	125					
Practical (P):												

Prerequisite: Engineering Mathematics, Manufacturing Processes and Design Engineering

## **Course Objectives:**

Understanding of basic principles of Reliability for ensuring sustainable product design. Application to system requirements, design, manufacturing and testing, with real-world examples. Understand in detail Asset Management, Maintenance, Quality and Productiveness.

## **Course Outcomes:**

Upon completion of the course, students will be able to

- Calculate MTTF, MTBF, failure rate and hazard rate for life characteristic phases of system
- Analyze series, parallel, mixed configuration systems using probability concepts.
- Apply different reliability apportionment techniques to improve reliability of system.
- Calculate inherent, achieved, and operational availability of system.
- Perform FEMA, FMECA and Design of Experiments
- Apply different methods to test reliability.

## Unit I: Fundamentals Concepts of Reliability

Reliability terminologies, Interrelationship of safety, quality and reliability, life characteristic phases, Introduction to maintainability, availability. Concepts of Failure, failure density, failure Rate, hazard rate, pdf, cdf. Modes of failure, Mean Time To Failure (MTTF), Mean Time Between Failure (MTBF), Numericals based on calculation of failure rate, hazard rate. Warranty Management and Life cycle cost.

## Unit II: Probability Concepts and System Reliability

Basic probability concepts, Discrete and continuous probability distributions, Analysis of series, parallel, mixed configuration systems, Concept of k-out of n structure, Conditional probability method, delta-star method for conditional probability analysis, Tie-set, and Cut-Set method (Concepts and Numericals).

## Unit III: System Reliability Analysis

Reliability Improvement- Redundancy, element redundancy, unit redundancy, standby redundancy (Numericals), Introduction to Reliability allocation or apportionment, reliability apportionment techniques: Equal apportionment, AGREE, ARINC, Minimum effort method (Numericals).

## **Unit IV: Reliability Management**

Objectives and types of maintenance, Maintainability, system down time, availability - inherent, achieved, and operational availability (Numerical treatment). Introduction to Reliability Centered Maintenance. Design for maintainability and its considerations, Reliability and costs, Costs of Unreliability, Technology aspects in Reliability Management, BIT (Built in testing).

## Unit V: Reliability in Design and Development

Reliability techniques- Failure mode, effects analysis (FMEA), Failure mode, effects, and criticality analysis (FMECA)- Case Studies, Basic symbols, Fault Tree construction and analysis, Introduction to Design of Experiments (DOE).

B. Tech (Pattern 2020)

## **Department of Mechanical Engineering**

## **Unit VI: Reliability Testing**

Introduction to reliability testing, Stress strength interaction, Testing for Reliability and Durability-Accelerated Life Testing and Highly Accelerated Life Testing (HALT), highly accelerated stress Screening (HASS). Reliability in manufacturing- Production FRACAS.

## Professional Elective-V Automobile Engineering (MEUA40202C)

Teaching Scheme	Examination Scheme									
Credits:2 Lecture (L): 2 hrs./week	CIE	ISE	SCE	ESE	PR/OR	TW	Total			
Tutorial (T): hr. Practical (P): hr	20	30	20	30	25	-	125			

Prerequisite: Strength of Materials, Theory of Machines, Machine Design, Workshop Practice I.

## **Course Objectives:**

- To make the student conversant with fundamentals of automobile systems.
- To develop competencies in performance analysis of vehicles.
- To make the student conversant with automobile safety, and vehicle Standard.

## **Course Outcomes:**

- Discuss the function of each automobile component.
- Compare different types of suspension and baking system.
- Estimation of steering kinematics of four-wheel vehicle.
- Analyze the tire ride properties for better vehicle performance.
- Identify the equation of motion used in vehicle to know the forces acting on it.
- Illustrate the safety parameters and emission standard of a vehicle.

## **Unit 1- Introduction automobile Engineering**

Automobile history and development, Classification, vehicle layout- engine location and drive arrangement, specifications of vehicles, Type of vehicle bodies, Chassis types, constructional details, Frames, sub frames, frameless vehicles, vehicle dimensions), details of chassis material.

## Unit II - Suspension System and Brakes

Sprung and unsprung mass, Types of suspension linkages, Type of springs- leaf, coil, air springs, hydro gas suspension, rubber suspension, interconnected suspension, self-leveling suspension (active suspension), damping and shock absorbers Types of brake systems - drum, disc, Operation-mechanical, hydraulic, air brakes, servo and power braking, ABS.

## **Unit III - Steering Kinematics**

Terminology, definitions – reference frame, toe-in, toe-out, wheel camber, caster and kingpin angle, steering offset, Steering geometry and types of gear box, power steering, equivalent mechanisms (front view / side view), anti-dive and squat geometry, steering geometry, steering force and moments.

## **Unit IV- Tire Characteristics**

Tire – types, axis system, mechanics of pneumatic tires - tire forces and moments, rolling resistance of tires, tractive (braking) effort and longitudinal slip (skid), cornering properties of tires, ride properties of tires.

## **Unit V- Vehicle Performance**

Equation of motion and maximum tractive effort, aerodynamic forces and moments, vehicle body moments, roll over, road performance curves, acceleration time and distance, gradability, Parameters, vehicle resistances.

## Unit VI- Advancement in Automobile

B. Tech (Pattern 2020)

#### BansilalRamnathAgarwal Charitable Trust's Vishwakarma Institute of Information Technology, Pune-48

(An Autonomous Institute Affiliated to Savitribai Phule Pune University)

## **Department of Mechanical Engineering**

Types of active and passive safety, vehicle interior and ergonomics, Types of vehicle maintenance, Electronic Stability Control (ESC), autonomous vehicle, autotronics, vehicle to vehicle communication, pre-collision technology.

## List of Practical:

- 1. Vehicle layout of four-wheeler to study the different components.
- 2. Design of chassis of FSAE using any design software.
- 3. Demonstration of suspension system of a vehicle.
- 4. Assembly and disassembly of gear box.
- 5. Design and study of steering system of any four-wheeler.
- 6. Calculation of tire forces and moments.
- 7. Testing of vehicle parameter using any virtual software.
- 8. Study of front and rear axle of a vehicle.
- 9. Study of vehicle emission standards.
- 10. Industrial Visit.

## **Text Books:**

## **Department of Mechanical Engineering**

Different Components in Wind Turbine Power Plant, Types of Wind Power Plants (WPPs): Small and large wind turbines; Horizontal and Vertical axis; Upwind and Downwind, One, Two and Three blades, Market **Survey and Specifications, Performance Analysis and Numerical,** Case study on designing miniature wind mill for domestic purpose referring existing system.

## Unit VI: Wind Turbine Generators and Power Transmission

Types of Wind Turbine Generators, DC Generator, AC Synchronous Generator, AC Asynchronous Generators, Switched Reluctance Wind Turbine Generator, Issues occur while integrating wind energy with power grids, reactive power compensation, HVDC and HVAC Transmission, onshore and offshore wind power and benefits of Wind Energy

List of Practical:

- 1: Design of solar food drier for domestic purpose referring existing systems.
- 2: Measurement of Solar Insolation at Residence. (Instruments)
- 3: Design of Solar Pump for Farm Irrigation.
- 4: Design of solar photovoltaic system for domestic/ commercial building purpose.
- 5. Design of Solar Operated home appliance.
- 6. Case study on designing miniature wind mill for domestic purpose referring existing system.
- 7. Visit to Solar PV System/wind power system used in commercial building.
- 8. Mini Project on Solar/Wind Energy.

## **Text Books:**

## Intellectual Property Rights (MEUA40205)

Teaching Scheme	Examination Scheme									
Credits: 2 Lecture (L): 2 hrs./week	CIE	ISE	SCE	ESE	PR/OR	TW	Total			
Tutorial (T): hr. Practical (P): - hrs./week	-	-	50	-	-	-	50			

## **Course objectives:**

- The course is designed to introduce fundamental aspects of Intellectual property Rights.
- The course introduces all aspects of the IPR Acts.
- It also includes case studies to demonstrate the application

## **Course outcomes:**

Upon completion of course, students will be able to

- 1. Demonstrate and develop awareness and impact of patent law on their academics and professional life.
- 2. Understand the procedure of patent filing.
- 3. Understand and aware importance of trade mark in industry.
- 4. Apply knowledge to read the patent document.

## **Unit 1: Overview of Intellectual Property**

Introduction and the need for intellectual property right (IPR) IPR in India – Genesis and Development IPR in abroad Some important examples of IPR

## **Unit II : Patents**

Macro economic impact of the patent system, Patentability, Types of IP tools, Copyright, trademarks, Patent databases, Patent document and its search, Rights of a patent,

## **Unit III : Patent Search**

Searching a patent, Patent database, Patent free database. Patent structure, Patent grants Procedure in India, Different layers of the international patent system (National, Regional and international options).

Copyright- Definition of copyright, Content of copyright, What are related rights, Rights covered by copy right.

## Unit IV : Trademark

Definition of trademark, Rights of trademark, Kind of signs can be used as trademarks, Types of trademark function, Protection of trademark, Trademark registration.

## **Text Books :**

- 1. Resisting Intellectual Property by Halbert ,Taylor & Francis Ltd ,2007
- 2. Industrial Design by Mayall, McGraw Hill
- 3. Intellectual Property Rights Under WTO by T. Ramappa, S. Chand

B. Tech (Pattern 2020)

4. Encyclopedia of Ethical, Legal and policy issue in Biotechnology by T. M. Murray and M. J. Mehlman, John Wiley and Sons 2000.

## **Reference Books :**

- 1. Nanotechnology Intellectual Property Rights: Research, Design, and Commercialization by Dr. S. K. Jabade, CRC Press
- 2. Product Design by Niebel, McGraw Hill
- 3. Introduction to Design by Asimov, Prentice Hall

## Project Work or Project III (MEUA40206)

Teaching Scheme	Examination Scheme									
Credits: 5	CIE	ISE	SCE	ESE	PR/OR	TW	Total			
Lecture (L): - hrs./week Tutorial (T): - hr. Practical (P): 10 hrs./week	100	-	-	-	50	-	150			

Prerequisite: All Mechanical Engineering Subjects till semester VI

## **Course objectives:**

To train the students to apply their engineering knowledge to real life problem solving. And to plan. implement and execute project work to satisfy the stated objectives of the project

## **Course Outcomes:**

By the end of the course, students will be able to

- 1. Identify and formulate the problem related to mechanical engineering based on literature survey.
- 2. Apply concepts and modern engineering tools to design the solution for identified problem.
- 3. Develop a system, component, or process to meet desired needs considering the standards and codes.
- 4. Prepare a plan of activities according to the time frame and budget.
- 5. Prepare and present technical report.
- 6. Work in a group as a part of multidisciplinary team with professional responsibility.

Individual project may have different POs based on the nature of project

The students in a group of not more than FOUR will work under the guidance of the faculty member on the project work undertaken by them. The completion of work, the submission of the report and assessment should be done at the end of semester VII/VIII.

The project work could be of the following nature:

- Design/development and Fabrication of models. Machines and prototypes based on new ideas, robotic and automation systems, Experimental set ups. Test rigs equipment.
- Thermal Systems, Energy audit, conservation studies
- Extensive computational analysis of problems relevant to mechanical engineering.
- CAD/CAM/CAE
- Modeling/simulation of product(s). mechanism(s) or system(s) and its validation or comparison with available bench mark results

A report containing minimum of 30 pages shall be submitted based on the project. Report point are;

- Background, need and scope of the project,
- Project specifications,
- Activities involved in the project and activity plan.
- Study of literature and basic theory.
- Design calculation, standards & codes used, analysis, simulation, experimentation, testing, manufacturing,
- Results, discussion, conclusion, and future work.

# MODULE-II SEMESTER- VII/VIII

## Semester Internship (MEUA40201)

Teaching Scheme		Examination Scheme								
Credits : 12	CIE	ISE	SCE	ESE	PR/OR	TW	Total			
Lecture (L) : hrs./week										
Tutorial (T): hr.	100	-	-	-	50	-	150			
Practical (P): 12 hrs./week										

Course Objectives:

 $\Box$  To Provide possible opportunities to learn, understand and sharpen the real time technical/managerial skills required at the job.

 $\Box$  To Familiarize with various materials, processes, products, and their applications along with relevant aspects of quality control

□ To Understand the social, economic, and administrative considerations that influence the working environment of industrial organizations.

 $\hfill\square$  To Understand the psychology of the workers and their habits, attitudes, ethics, and approach to problem-solving

Course Outcomes:

At the end of this course, a student will be able to -

1. Understand the industrial requirement in terms of ethics, skillsets for future employees/entrepreneurs

2. Apply knowledge gained in academics to the industrial applications

3. Function effectively as an individual and as a member of the multidisciplinary team

4. Get a good opportunity as a potential employer

# **MODULE-III**

## **Elective-IV: Computational Fluid Dynamics (MEUA42201A)**

#### BansilalRamnathAgarwal Charitable Trust's

Vishwakarma Institute of Information Technology, Pune-48

(An Autonomous Institute Affiliated to Savitribai Phule Pune University)

## **Department of Mechanical Engineering**

Solution of two dimensional steady and unsteady heat convection-diffusion equation for slug flow, using finite volume method (Implicit and Explicit), Stability Criteria, 1-D transient convection- diffusion system, Peclet Number

#### Unit VI: Introduction to Turbulence Modeling

Introduction to turbulence models, Reynolds Averaged Navier-Stokes equations (RANS), One equation model (Derivation) and two equation model.

#### **List of Practical:**

- 1. One-dimensional steady state conduction meshing using finite volumemethod
- 2. Two-dimensional steady state conduction using finite volumemethod
- 3. Two-dimensional unsteady state conduction using finite volumemethod
- 4. Two-dimensional advection using finite volumemethod
- 5. One-dimensional conduction convection problem using finite volumemethod
- 6. Solution of Navier Stokes equation using SIMPLE algorithm for LidDriven Cavity flowproblem

Mini-project based on above practical's.

- 4. Mazumdar S. K., "Composaite Manufacturing Materials, Product and Processing Engineering", CRC Press, Boca Raton, 02.

## Assignments:

- 1. Demonstration on manufacturing of synthetic fiber reinforced composite laminate using compression molding machine.
- 2. Demonstration on manufacturing of synthetic fiber reinforced composite laminate using vacuum bagging technique
- 3. Tensile testing of composite coupon specimen
- 4. Micromechanical Analysis of lamina using MATLAB;
- 5. Macromechanical Analysis of lamina using MATLAB;
- 6. Macromechanical Analysis of laminate using MATLAB

## Course Coordinator: Dr. A.R.Mache

#### **BoS Member:**

7

B. Tech (Pattern 2020)

## **BoS Chairman:**

## **Elective-IV: Mechanical System Design (MEUA42201C)**

Teaching Scheme	Examination Scheme									
Credits: 4 Lecture (L): 3 hrs./week	CIE	ISE	SCE	ESE	PR/OR	TW	Total			
Tutorial (T): hr. Practical (P): 2 hrs./week	20	30	20	30	25	-	125			

**Prerequisite:** Engineering Mechanics, Manufacturing Process, Engineering Mathematics, SOM, TOM, DME, IC Engines.

## Course objectives:

- 1. To develop competency for system visualization and design.
- 2. To enable student to design machine toolgearbox.
- 3. To enable student to design material handlingsystems.
- 4. Ability to apply the statistical considerations in design and analyze the defects and failure modesin components
- 5. To enable student to design cylinders, pressure vessels and internal engine components and to use IScode.
- 6. To enable student to study and understand automobile suspensionsystem

## **Course Outcomes:**

By the end of the course, students will be able

- 1. To design machine tool gearbox for varioussystem.
- 2. To design belt conveyer system for material handlingsystem.
- 3. To study different statistical methods/ techniques/ principles and apply it tomechanical components.
- 4. To Design various types of cylinders and pressurevessels.
- 5. To Understand the design concept and procedure for IC enginecomponents.
- 6. To Understand the concept for automobile suspensionsystem.

## Unit I - Design of Machine Tool Gearbox

Introduction to machine tool gearboxes, design and its applications, basic considerations in design of drives, determination of variable speed range, graphical representation of speed and structure diagram, ray diagram, selection of optimum ray diagram

## Unit II - Design of Belt conveyer system for material handling

System concept, basic principles, objectives of material handling system, unit load and containerization. Belt conveyors, Flat belt and troughed belt conveyors, capacity of conveyor, rubber covered and fabric ply belts, belt tensions, conveyor pulleys, belt idlers, tension take-up systems, power requirement of horizontal belt conveyors for frictional resistance of idler and pulleys.

## Unit III – Design of Cylinder

B. Tech (Pattern 2020)

## **Department of Mechanical Engineering**

## Design of Cylinders:

Thin and thick cylinders, Lame's equation, Clavarino,,s and Bernie's equations, design of hydraulic and pneumaticcylinders,auto-frettageandcompoundcylinders,(NoDerivation)gasketedjointsincylindrical vessels

## Unit IV- Design of Pressure Vessel

Design of pressure Vessel:

Modes of failures in pressure vessels, unfired pressure vessels, classification of pressure vessels as per I. S.2825-categoriesandtypesofweldedjoints,weldjointefficiency,stressesinducedinpressurevessels, materialsforpressurevessel,thicknessofcylindricalshellsanddesignofendclosuresaspercode,nozzles andopeningsinpressurevessels,reinforcementofopeningsinshellandendclosures-areacompensation method

## Unit V- Design of I. C. Engine components

Introduction to selection of material for I. C. engine components, Design of cylinder and cylinder head, construction of cylinder liners, design of piston and piston-pins, piston rings, design of connecting rod. Design of crank-shaft and crank-pin, (Theoretical treatment only).

#### Unit VI– Automobile Suspension System

Suspensions: Types of suspension linkages, types of suspension springs- leaf, coil, air springs, hydrogas, rubber suspension, interconnected suspension, self levelling suspension (active suspension), shock absorbers (hydraulic andair)

B. Tech (Pattern 2020)

## **Open Elective-I: Introduction to Gaming (IOEUA42202A )**

Teaching Scheme	Examination Scheme						
Credits: 3 Lecture (L): 2 hrs./week	CIE	ISE	SCE	ESE	PR/OR	TW	Total
Tutorial (T): hr. Practical (P): 2 hrs./week	20	30	20	30	-	25	125

**Prerequisite:** Readers/students are expected to know the following concepts:

1. Basics of Probability

#### **Course Objectives:**

- To learn about the video game art principles, Video Game production, Design Process and the Industry
- To understand and distinguish Video game elements, genres, types ad hardware
- To Study various video game production practices, terminology, Industry roles and responsibilities
- To know the application and use of a game engine across various verticals and develop and learn how to work with the game engine as a tool for production
- To examine and game engine interface, coding, game objects, asset Store, services, etc

#### **Course Outcomes:**

- 1. Use terminology related to Games and Interactive Media Industry
- 2. identify industry demands and structure project as per required specifications
- 3. Define Specifications for the execution of the project
- 4. Demonstrate game engine tools usage across art, animation, asset management, Interface, Audio, Lighting, Materials, Physics and Programming systems.
- 5. Select gaming services related to project structure
- 6. Develop basic interactive games

#### Unit- I : Introduction to Games Industry

Video game production techniques, hardware, production roles and responsibilities, Video game design elements, game genres, game types, examples of gaming platforms, gaming services, video game controls, video game industry terms, model asset optimization, asset store, video game art principles, video game industry practices, video game industry terminology

#### **Unit-II : Game Engine Fundamentals**

Gaming engine user interface, hierarchy, editor, game Window, navigation, inspector, scene, project, game object, prefab, models, tags, sounds, assets, project management, materials, textures, effects, lights, modelling practices and optimization practices, Import system, managing materials, managing textures

#### **Unit III: World Building and Animation**

Environment, Static Meshes, Rigid Body, Colliders, Preparing for lighting, Light tools, light types, User Interface, Art principles, Sprite editor, Lighting process, Baking process, Animated objects, Importing animation, Setting up animation states, Animation controllers, Transition, Animation refinement.

Unit IV: Scripting a Game Development

Script types, Variables, Methods, C# fundamentals, Game mechanics, Ray casting, Program Debugging, Various Error states, Navigation, Nav Mesh, Building NPC, Simple AI, Enemy System, Particle system, Adding Game audio, Audio types, Audio formats, Audio clips and properties, Camera System, Building camera system, Player Behaviors, User Interface system, User Interface Implementation, Properties of UI, Build tools, Cloud Services, Console, Build Settings, Platforms, Publishing tools, Mobile Publishing

#### **Text Books :**

- 1. Tom Meigs, Ultimate Game Design: Building Game Worlds 1st Edition, McGraw-Hill Education, 2003
- 2. Sam R. Kennedy, How to Become a Video Game Artist: The Insider's Guide to Landing a Job in the Gaming World, Watson-Guptill, 2013

#### **Reference Books :**

- 1. Penny de Byl, Holistic Game Development with Unity: An All-in-One Guide to Implementing Game Mechanics, Art, Design and Programming, 2nd Edition, A K Peters/CRC Press, 2017
- 2. Mike Geig, Unity 2018 Game Development in 24 Hours, Sams Teach Yourself, 3rd Edition, Sams Publishing, 2018

List of Assignments

Develop a game "Roller Madness" in Unity environment as following assignments

- 1. Implement the Setting Up the Scene, Camera Setup
- 2. Implement the Physics system
- 3. Configure the Player Control and Appearance
- 4. Health and Damage, Pickups,
- 5. UI Basics and Game Manager,
- 6. Create the Enemies
- 7. Implement the Particle System
- 8. Implement Animations to the game avatar
- 9. Spawners to create multiple objects of same type

B. Tech (Pattern 2020)

**Mechanical Engineering** 

Note : Do any 6 assignments based on syllabus

**Course Coordinator:** 

**BoS Member:** 

**BoS Chairman:** 

## **Open Elective-I:** Inferential Statistics for Data Science (IOEUA42202B)

Teaching Scheme	Examination Scheme						
Credits: 3 Lecture (L): 2 hrs./week	CIE	ISE	SCE	ESE	PR/OR	TW	Total
Tutorial (T): hr. Practical (P): 2 hrs./week	20	30	20	30	-	25	125

**Prerequisite:** Readers/students are expected to know the following concepts:

2. Basics of Probability

#### **Course Objectives:**

- To equip students with the basic understanding of the fundamental concept of data and the nature of data sets
- To understand the fundamentals of probability distributions and their application for data analysis
- To derive the conclusions from the data sets with Bayesian and Inferential statistics

### **Course Outcomes:**

- 1. Explain the nature and central tendency of given data sets using appropriate probability distribution for the given data set.
- 2. Estimate probability of unknown parameters of statistical model using the fundamentals of Bayesian statistics.
- 3. Analyze and conclude the hypothesis using inferential statistical tests
- 4. Evaluate the prominent characteristics of data sets with exploratory data analysis methods

### Unit- I : Understanding Data and probability distributions

Understanding Data, Frequency Tables, Distributional Shapes, Central Tendency Describing Spread: Range, Interquartile Ranges and Standard Deviation, Measuring Data ,Measurements of Central Tendency, Measurements of Dispersion, Bi-variate Data and

Covariance ,Pearson Correlation Coefficient, Uniform Distribution, Binomial Distribution, Poisson Distribution, Normal Distribution, Normal Distribution - Formulas and Z Scores

#### **Unit-II : Bayesian Statistics**

Likelihood function and maximum likelihood, The minimaxity, Computing the MLE, Computing the MLE: examples ,Continuous version of Bayes' theorem, <u>Priors and prior predictive</u> <u>distributions</u>

Prior predictive: binomial example, Posterior predictive distribution, Bernoulli/binomial likelihood with uniform prior, Conjugate priors

#### **Unit III: Inferential analysis**

Central limit theorem and Hypothesis Testing, t-tests, Sensitivity Analysis, chi square test, Correlation-values and confidence intervals, Use Analysis of Variance (ANOVA) or Analysis of Covariance (ANCOVA), Regression analysis

#### **Unit IV: Exploratory Data Analysis**

Univar ate data: measures of center and spread, transformations, visualization. – Bivariate data: Simple regression, curve fitting, – Trivariate/Hypervariate data: Multiple regression, model selection, principal components. – Binary responses: Logistic regression, residuals. – Categorical data: Contingency tables, correspondence analysis. – Distance data: Multi-dimensional scaling, non-linear dimensionality reduction. – Graph data: Descriptive statistics, spectral methods, visualization.

#### **Text Books :**

- 1. Sahu, Pradip Kumar, Pal, Santi Ranjan, Das, Ajit Kumar, "Estimation and Inferential Statistics", Springer
- 2. S.C. Gupta and V. K. Kapoor : Fundamentals of Mathematical Statistics, Sultan Chand and Sons, 88, Daryaganj, New Delhi, 2.
- 3. Manoj Kumar Srivastava, Abdul Hamid Khan, Namrata Srivastava, "Statistical Inference, Theory of estimation", PHI

#### **Reference Books :**

- 1. George Casella, Roger Berger," Statistical Inference ",CENGAGE Learning, Second Edition
- 2. Malcom O, Asadoorian, Demetri Kantarelis, "Essentials of Inferential Statistics", University Press of America

#### Practicals: Practicals can be done using Python/R

Study of Hypothesis testing(One sample t test, z test)

- 1. Analysis of variance (ANOVA)
- 2. To study Linear regression to predict the outcome of a variable
- 3. 4. Study of outlier in Predictive analysis
- 4. Finding the most important predictor variable in a dataset for feature Selection
- 5. 6.Model selection and analysis for a real world dataset

B. Tech (Pattern 2020)

#### **Mechanical Engineering**

## Department of Mechanical Engineering

- 6. 7. Study of Logistic Regression
- 7. 8.To build an application: Time series forecasting

### **Course Coordinator:**

**BoS Member:** 

**BoS Chairman:** 

## **Elective-IV: Energy Engineering (MEUA42201C)**

Vishwakarma Institute of Information Technology, Pune-48

(An Autonomous Institute Affiliated to Savitribai Phule Pune University)

### **Department of Mechanical Engineering**

#### **Course Outcomes:**

By the end of the course, students will

- 1. Describe the power generation scenario, the layout components of thermal power plant and analyze the improved Rankin cycle, Cogeneration cycle
- 2. Analyze the steam condensers, recognize the environmental impacts of thermal power plant and method to control the same
- 3. Describe the layout, component details of hydroelectric power plant and nuclear power plant
- 4. Explain the details of diesel power plant, gas power plant and analyze gas turbine power cycle
- 5. Describe the fundaments of non-conventional power plants.
- 6. Describe the different power plant electrical instruments.

#### **Unit 1 - Thermal Power Plant**

Introduction: General layout of modern power plant with different circuits, working of thermal power plant, coal classification and its CV, high pressure boilers (Latest three), Rankine cycle with reheat and regeneration (Separate Numerical with Mollier Diagram), Cogeneration power plant (with numerical)

#### Unit 2 Steam Surface Condenser and Cooling Tower

Steam Condenser: Necessity of steam condenser, Classification, Cooling water requirements, Condenser efficiency, Vacuum efficiency, (Numerical) Cooling towers (Performance Parameters), air Leakage, Effects of Air Leakage on condenser performance, (Numerical Treatment)

#### **Unit 3 – Hydroelectric Power Plant**

Introduction, Site Selection, Advantages and Disadvantages of HEPP, Hydrograph, Flow duration curve, (Numerical) Mass Curve, Classification of HEPP with layout.

**Nuclear Power Plants:** Elements of NPP, Nuclear reactor & its types, fuels moderators, coolants, control rod, classification of NPP, N-waste disposal (No Numerical)

#### **Unit 4 - Gas Turbine Power Plant**

Layout of Gas Turbine Power Plant with Important Systems, Brayton Cycle analysis, Thermal Efficiency, Work ratio, maximum & optimum pressure ratio, Isentropic Efficiency of Compressor and Turbines, Inter-cooling, reheating, & regeneration cycle, (Separate Numerical) Combined power cycle plant.

#### **Unit 5 - Non-Conventional Power Plants**

**Wind Power Plant**: Introduction, wind availability measurement, types of wind machines, site selection, and wind power generation.

**Solar Power Plant :** Low & High Temperature Solar Power Plant, Photovoltaic Power System (Case Study), Heliostat, Challenges in commercialization of Non-Conventional Power Plants.

#### **Unit 6 Power Plant Instrumentation**

Generator, Transformers, Exciters, Switch Gear, Circuit breakers, Protective Devices and Control Systems, Boiler Instrumentation and Control

**Term-Work** 

Vishwakarma Institute of Information Technology, Pune-48

(An Autonomous Institute Affiliated to Savitribai Phule Pune University)

### **Department of Mechanical Engineering**

The Term-Work shall consist of any eight experiments

- 1) Study of High Pressure boilers.
- 2) Visit to thermal Power plant /Co-generation Power plant to understand layout and specifications of main components.
- 3) Visit to any Non-Conventional Power Plants.
- 4) Trial on steam power plant.
- 5) Simulated performance of Steam Power plant with suitable software.
- 6) Simulated performance of Gas Turbine Power plant.
- 7) Trial on Diesel Power Plant to understand performance parameters by Graphs.
- 8) Power plant Instrumentation.
- 9) Case study on Solar/Wind with numerical or suitable software.

#### **Text Books**

- 1) P.K.Nag, —Power Plant Engineering, McGraw Hill Publications New Delhi.
- 2) Mahesh M Rathore, Thermal Engineering, Tata McGraw Hill, New Delhi
- 3) S.P.Sukhatme, —Solar Energy Tata McGraw-Hill Publications, New Delhi (Latest Edition)

## **Open Elective-I:** Social Media Analytics (IOEUA42202E)

Teaching Scheme	Examination Scheme							
Credits: 3 Lecture (L): 2 hrs./week	CIE	ISE	SCE	ESE	PR/OR	TW	Total	
Tutorial (T):hr. Practical (P): 2 hrs./week	20	30	20	30	-	25	125	

#### **Prerequisites:**

1.Basic knowledge of Graphs.

2. Data mining.

3. Data Analysis.

## Department of Mechanical Engineering

### **Course Objectives:**

Upon successful completion of the course, students will be able to

- 1. Understand foundations of Social Media Analytics.
- 2. Visualize and understand the data mining aspects in social networks.
- 3. Solve mining problems by different algorithms.
- 4. Understand network measures for social data.
- 5. Understand behavioral part of web applications for Analysis.
- 6. Analyze the data available on any social media applications.

### **Course Outcomes:**

By the end of the course, students should be able to

- 1. Explain the basics of Social Media Analytics.
- 2. State the visualization of social networks and the significance of Data mining in Social media.
- 3. Demonstrate the algorithms used for text mining.
- 4. Compare network measures for social media data.
- 5. Explain Behavior Analytics techniques used for social media data.
- 6. Apply social media analytics for Facebook, LinkedIn and Twitter kind of applications.

Unit I – Introduction To Social Media Analytics (Sma) And Types Of Analytics Tools

Social media landscape, Need for SMA; SMA in Small organizations; SMA in large organizations; Application of SMA in different areas,

The foundation for analytics, Social media data sources, Defining social media data, data sources in social media channels, Estimated Data sources and Factual Data Sources, Public and Private data, data gathering in social media analytics

### UNIT II - The Social Networks Perspective And Its Visualization

The social networks perspective - nodes, ties and influencers, Social network and web data and methods. Graphs and Matrices- Basic measures for individuals and networks.

A Taxonomy of Visualization, The convergence of Visualization, Interaction and Analytics. Data mining in Social Media: Introduction, Motivations for Data mining in Social Media, Data mining methods for Social Media

### Unit III – Text Mining In Social Networks

Introduction, Keyword search, Classification Algorithms, Clustering Algorithms-Greedy Clustering, Hierarchical clustering, k-means clustering, Transfer Learning in heterogeneous Networks, Sampling of online social networks, Comparison of different algorithms used for mining, tools for text mining.

### Unit IV - Network Measures

Centrality: Degree Centrality, Eigenvector Centrality, Katz Centrality, PageRank, Betweenness Centrality, Closeness Centrality, Group Centrality, Transitivity and Reciprocity, Balance and Status, Similarity: Structural Equivalence, Regular Equivalence

### **Unit V – Behavior Analytics**

Individual Behavior: Individual Behavior Analysis, Individual Behavior Modeling, Individual Behavior Prediction Collective Behavior: Collective Behavior Analysis, Collective Behavior Modeling, Collective Behavior Prediction

## **Department of Mechanical Engineering**

### Unit VI - Case Study

Mining Twitter: Overview, Exploring Twitter's API, Analyzing 140 Characters Mining Facebook: Overview, Exploring Facebook's Social Graph API's, Analyzing Social Graph Connections.

Mining Linked In: Overview, Exploring Linked In API

## **Open Elective-II: Financial Technology**

**Prerequisite:** Readers/students are expected to know the following concepts: Basics of Probability

Vishwakarma Institute of Information Technology, Pune-48

(An Autonomous Institute Affiliated to Savitribai Phule Pune University)

### **Department of Mechanical Engineering**

#### **Course Objectives:**

- To Introduce FinTech and it's sub sectors
- To Explain the classification of various models of FinTech.
- To Describe the innovation in FinTech
- To Introduce an innovative Fin Tech strategy
- To Study the development of FinTech Application and about future trends in Fin Tech

#### **Course Outcomes:**

After completion of the course, student will be able to

- 1. Describe what FinTech is and the sub sectors that comprise it.
- 2. Classify various models of the Fintech
- 3. Illustrate various innovations done using latest technology trends in FinTech
- 4. State the Critical Success Factors in Fin Tech
- 5. Practice an innovative Fin Tech strategy within their own organization to lead a digital transformation project.
- 6. Develop the application using the concepts of FinTech as a case stud

#### **Unit- I : Unit I: Introduction to Fintech**

Introduction, Financial Services and Fintech: Introduction, Changing Environment, Customer Centricity, Digital Transformation, Definition of Fintech, History of Fintech, Fintech stages, An Overview of Fintech Initiatives Around the World, Ecosystems, Ranking National Ecosystems, Downsides of Disruptive Fintech Initiatives.

#### **Unit-II : Model and Classifications**

Introduction, Classification, Five Ws and one H : 1. Why a fintech initiative was born? 2. For whom was it born? 3. Which are the services it aims to provide? 4. Where does it aim to perform its business? 5. When does it aim to operate, within the framework of the financial cycle? 6. How is fintech working? The organization and its elements, The V4 business model framework, A Business Model, A Business Model for Fintech, Revenue—Focus on Customer Lifetime Value, Components of an effective marketing plan.

#### **Unit III: Fintech Innovation**

Introduction, Innovation and Fintech, Digital Transformation and Fintech, A model for an integrated innovation strategy, Types of Innovation : Product (or services), Process, Organization, Business models, Examples of Innovation, Fintech business model canvas, Process Innovation : Big Data Analytics, Value Creation from Big Data Analytics, Kreditech's self-learning algorithm, Internet of Things, Blockchain Technology, Organizational Innovation: Social Networks, Business Model Innovation, Robots, The V4 business model framework for Kreditech, Virtual Currencies, Technology Acceptance Model.

#### **Unit IV: Critical Success Factors**

The Model, Low-Profit Margin, Agility, Scalability, Security Management, Innovation, Ease of Compliance, Metrics, Fintech and Financial Services, Structure of fintech initiatives, The Challenges, Aspects to Consider, A Cooperation Model, Open Innovation

### **Unit-V: Regulations**

The Role of the Regulators, Equal Treatment and Competition, The Risks to Consider, Regtech, A Business Model for Insurtech Initiatives, Drivers of Disruption, The Impact of Technology, Insurance and Technology: Insurtech, Application of the Model to the Insurance Industry, The Empowerment of Customers, Mobility in Support of Insurance Companies, Digital Wholesale Insurance,

### Unit VI: A Case Study

Introduction, Robotica, Business Model Canvas, The Value Proposition, Customer Experience, Channels, Processes and Activities, Resources and Systems, Partnership and Collaborations, Revenues, Costs and Investments,

The Future: Financial Services as Platforms

### Department of Mechanical Engineering

Teaching Scheme		Examination Scheme								
Credits: 3 Lecture (L): 3 hrs./week	CIE	ISE	SCE	ESE	PR/OR	TW	Total			
Tutorial (T): - hr. Practical (P): - hrs./week	20	30	20	30	-	-	100			
Prerequisites:										
• Nil										
Course Objectives:										
• To understand the ba	sic fundamenta	als of Blo	ckchain							
• To introduce Bitcoin	Blockchain									
• To explain blockchai	n creation proc	ess								
• To know the importa	-									
• To gain knowledge a	• •	-								
• To discuss the emerg		-	n and Use	cases						
Course Outcomes:										
After completion of the cour	se. student wil	be able t	0							
1. Demonstrate fund				n						
2. Explain Bitcoin I										
3. Describe blockch		ocess								
4. Explain Hyperledger										
5. Describe Emergin		lockchain								
	6									
Unit I : Overview of Blo	ckchain									
Basics of Blockchain, Histor	y of Blockchai	n, Netwo	rk and pro	otocols, S	mart Cont	ract and C	Consensus			

Algorithms, Blockchain users and adoption, Blockchain challenges

Unit II : Bitcoin Blockchain

Blockchain TOC Bitcoin/ Blockchain data structures, Keys as identity, Digital Signatures, Hashes, Hashes as Addresses, Hash Pointers and Data Structures, Blockchain transactions, Blockchain block structure

#### Unit III : Creating the Blockchain: Mining

Mining explained, The bitcoin network, The bitcoin Minning Process, Minning Developments

#### Unit IV : Hyperledger

Overview of Hyperledger, Hyperledger Projects, Hyperledger Architecture, Consensus model for permissioned Blockchains, Consensus and its interaction with architectural layers, Architecture of Enterprise level Blockchain applications.

#### Unit V : Blockchain on Multichain

Introduction to Multichain, Privacy and Permissions in Multichain, Features of Assets in Multichain, Multichain Streams, Mining in Multichain, Interactive mode commands, Round Robin Mining

### Unit VI: Emerging Trends in Blockchain and Use cases

Transaction limitations, Additional blockchains, Hyperledger, Ethereum, Ripple, R3, Blockchain and cloud computing, Cloud -Based Blockchains,

Blockchain Use cases, Blockchain and Artificial Intelligence.

#### **Text Books :**

1	Mastering Bitcoin: Unlocking Digital Cryptocurrencies, by Andreas Antonopoulos
2	Blockchain by Melanie Swa, O'Reilly
