(An Autonomous Institute affiliated to Savitribai Phule Pune University)

# Syllabus for T.Y.B. Tech. Civil Engineering (Pattern 2020)

# Department of Civil Engineering

Bansilal Ramnath Agarwal Charitable Trust's Vishwakarma Institute of Information Technology, Pune-48 (An Autonomous Institute Affiliated to Savitribai Phule Pune University)

# **Department of Civil Engineering**

# Vision:

Excellence in Civil Engineering Education

# Mission:

M1: Make competent Civil Engineers with high level of professional, moral and ethical values

M2: Impart highest standards in theoretical as well as practical knowledge and skill set

M3: Establish Center of Excellence in major areas of Civil Engineering to respond to the current and future needs of the industry, higher studies as well as research

# **PROGRAM EDUCATIONAL OBJECTIVES**

PEO 1: Graduates will have successful career in the field of Civil

Engineering

PEO 2: Graduates will respond to growing demands of society through

professional and ethical practices

PEO 3: Graduates will pursue lifelong learning including higher studies

in the field of Civil Engineering

## **Department of Civil Engineering**

## **PROGRAM OUTCOMES (POs)**

## **Engineering Graduates will be able to:**

Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
 Problem analysis: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

3. **Design/development of solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

4. **Conduct investigations of complex problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

5. **Modern tool usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

6. **The engineer and society**: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

7. **Environment and sustainability**: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and needfor sustainable development.

8. **Ethics**: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

9. **Individual and team work**: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

10. **Communication**: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

11. **Project management and finance**: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

12. Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Bansilal Ramnath Agarwal Charitable Trust's Vishwakarma Institute of Information Technology, Pune-48 (An Autonomous Institute Affiliated to Savitribai Phule Pune University)

# **Department of Civil Engineering**

# **PROGRAM SPECIFIC OUTCOMES (PSO):**

PSO1: Engineering graduates will be able to plan and execute the activities of

construction projects

**PSO2**: Engineering graduates will be able to analyze and design components of Civil Engineering Systems.

(An Autonomous Institute Affiliated to Savitribai Phule Pune University)

# **Department of Civil Engineering**

Teaching Scheme		E	xaminati	on Scher	ne		
Credits: 4	CIE	ISE	SCE	ESE	PR/OR	TW	Total
Lecture (L): 3 hrs./week		IDL	Jel -	LOL	110,010	1	Total
Tutorial (T): NA	•	20	•	•	25		105
Practical (P): 2 hrs./week	20	30	20	30	25	-	125
<b>Prerequisite course(s):</b> Fluid Mechar	nics, Hydi	raulic Eng	gineering	, Irrigatio	n Engine	ering-I	
Course Objective(s):							
1. To facilitate the students about k	0		-	0	oility chec	k of grav	vity dam &
Earthen dam, design of spillway		-					
2. To facilitate the students to anal				indations	and intro	ductory l	knowledge
about cross drainage works and	river trair	ning work	S.				
Course Outcomes:							
Upon completion of the course, stud	onte will	he able to	<b>`</b>				
1. Determine reservoir capacity				outflow	elevation	canacity	curve and
dependable yield.	y using a	iniuai inii		Juliiow,	cicvation	capacity	cuive and
2. Execute stability analysis of	gravity d	am.					
3. Design of ogee spillway and	•		device b	elow the	spillwav		
4. Perform stability analysis of	<b>.</b>	-			~ <b>r</b> ·· ·· <b>y</b>		
5. Execute analysis of weirs on			tions and	design o	f lined ca	nal	
6. Understand functioning of cr	1			0			
Unit I: Introduction to dams and Res	servoir P	lanning					
Introduction, Different terms related to c	lams, Sel	ection of	site for da	um, Facto	rs govern	ing select	tion of type
of dam, Classification of dams, Dams a	nd earth	juakes, D	ams and	social iss	sues, large	e dams vo	erses small
dams, Displacement and rehabilitation,	Dams and	d climate	change				
Reservoir Planning: Introduction, Terr	n related	to reser	voir plan	ning (Yi	eld, Rese	ervoir pla	nning and
operation curves, Reservoir storage,							
Significance of mass curve and demand							
of reservoir capacity from annual infl				of reserv	oir capac	city using	g elevation
capacity curve and dependable yield, Re	eservoir r	egulation	,				

#### **Unit II: Gravity Dams and Arch Dams**

## **Gravity Dams**

Introduction, Components of gravity dam, Conditions favoring gravity dams, Forces acting on gravity dam, Combinations of loading for design, Seismic analysis of dam, Terms related to seismic analysis, Determination of Seismic forces, Effect of horizontal earthquake acceleration, Effect of vertical earthquake acceleration, Stress analysis in gravity dam, Vertical or normal stress, Principal stresses, Shear stress, Middle third rule, Modes of failure of gravity dam, Elementary profile of gravity dam, Design of low and high gravity dams, Design methods of gravity dam (Introduction only)--Gravity method or 2 D method

#### Vishwakarma Institute of Information Technology, Pune-48

(An Autonomous Institute Affiliated to Savitribai Phule Pune University)

## **Department of Civil Engineering**

## Arch Dam and Other Dams (Introduction only)

Introduction, Concept of Arch Dam, Conditions favoring an arch dam, Classification of an arch dam, Constant angle arch dam, Constant radius arch dam, Variable radius arch dam, Arch gravity dam, Double curvature arch dam, Buttress dams, Advantages of Buttress dams, Limitations of Buttress dams, Types of buttress dams.

## Unit III: Spillway and Gates

Introduction, Location of Spillway, Different key levels and heads in spillway, Spillway Capacity, Components of spillway, Classification of spillway, Introduction to straight drop spillway(Free overflow spillway),Saddle spillway, Side channel spillway, Overflow or ogee spillway, Chute or open channel or trough spillway, Shaft or morning glory spillway, Siphon spillway, Conduit or tunnel spillway, Stepped spillway,

Design of Ogee spillway or overflow spillway, Shape of crest, Equations for spillway profile, Energy dissipation below spillway, Classification of energy dissipation devices, Energy dissipation in stilling basin, Stilling basin, Components of stilling basin, Types of stilling basins, Indian standard stilling basins, Energy dissipation through buckets, Solid roller bucket, Slotted roller bucket, Ski jump bucket, Correlation between jump height and tail water depth, Correlation 1-2-3-4-5 of TWD Vs Jump depth.

Spillway gates, Classification of spillway crest gates, Requirements of spillway gates, Maintenance of gates, Inspection of gates

## Unit IV: Earthen Dam

Introduction, Conditions favoring an earth dam, Limitations of earth dam, Classification of earth dam, Components of an earth dam, Requirements for safe design of earth dam, Hydraulic (Seepage) Analysis, Plotting of seepage line,

Case 1: Homogeneous earth dam with horizontal drainage blanket, Determination of seepage discharge using phreatic line.

Case II: Composite earth dam with casing and hearting, Properties of phreatic line, Determination of seepage discharge through earth dam using flownet, Structural stability analysis, Forces acting on earth dam, Method of stability analysis of an earth dam, Procedure of analysis by Swedish slip circle method, Fellenius Method of Locating Centre of Critical Slip circle, Stability Analysis for Foundation, Failure of earth dam, Classification of failure of earth dams, Seepage control in earth dams, causes of seepage, Seepage control measures

### Unit V: Diversion head works and Canals

Introduction, Function of diversion head works, Selection of site for diversion head works, Layout of diversion head works, Components of diversion head works, Design of weir on permeable foundation, Criteria for safe design of weir floor, Khosla's theory based on potential theory approach, Khosla's theory of independent variables, Design criteria of weirs on permeable foundations

#### Canals

Introduction, Classification of canals, Selection of canal alignment, Design of stable canal in alluvial beds, Kennedy's theory, Design of canal by Kennedy's theory, Limitations of Kennedy's theory, Lacey's regime theory, Design of canal by Lacey's theory, Canal lining, Need of canal lining, Requirements of lining material, Classification of canal lining

## Unit VI: Cross Drainage Works and River Training Works

T.Y. B. Tech. (Pattern 2020)

## Vishwakarma Institute of Information Technology, Pune-48

(An Autonomous Institute Affiliated to Savitribai Phule Pune University)

## **Department of Civil Engineering**

## C. D. Works (Introductory treatment only)

Introduction, Necessity of cross drainage works, Selection of site for Cross Drainage work, Classification of Cross Drainage works, Selection of suitable type of C. D. works

## **River Training Structures (Introductory treatment only)**

Introduction, Classification of rivers, Behavior of rivers, River training, Objectives of river training, Classification of river training, purpose, orientation, River training structures, Embankment or Levee, Guide banks, Groynes or spurs, Artificial cut off, Pitched Island, submerged sill or dykes, Closing dykes.

## Term Work:

## (Oral Examination will be based on this term work)

Following are the assignments to be completed by students

- 1. Determination of reservoir capacity
- 2. Stability analysis of gravity dam
- 3. Design of profile of spillway and energy dissipation device below the spillway
- 4. Stability analysis of earthen dam
- 5. Analysis of weirs on permeable foundations.
- 6. Design of lined canal

## **Textbooks:**

# Structural Design and Drawing I (CVUA31202)

Teaching Scheme	Examination Scheme								
Credits: 4 Lecture (L): 3 hrs./week Tutorial (T): NA	CIE	ISE	SCE	ESE	PR/OR	TW	Total		
Practical (P): 2 hrs./week	20	30	20	30	25	-	125		

#### **Course Objectives:**

• To develop the ability to understand the behaviour and basic concepts in design of various members of reinforced concrete structures subjected to combination of different loads based on provisions of Indian Standard code

**Course Outcomes:** Upon completion of the course, students will be able to

- 1. Understand the composite action of reinforced concrete, concept of transformed section, singly and doubly reinforced concrete section, design philosophies and analyze under reinforced singly, doubly and flanged reinforced concrete section subjected to flexure using Limit State Method.
- 2. Understand concepts of limit state of serviceability and stability of a structure and designreinforced concrete section subjected to flexure using Limit State Method (LSM)
- 3. Analyze and design reinforced concrete section subjected to shear, torsion and bond using Limit State Method as per guidelines given in Indian Standard Code
- 4. Design one way and two way reinforced concrete slabs and dog legged staircase using Limit State Method as per guidelines given in Indian Standard Code
- 5. Design reinforced concrete short column and isolated column footing subjected to gravity loads using Limit State Method as per guidelines given in Indian Standard Code
- 6. Design reinforced concrete isolated column footing subjected to gravity loads using Limit State Method as per guidelines given in Indian Standard Code

#### Unit I – Introduction to reinforced concrete (RC) and limit state method

Introduction to R. C. (composite action). Role of structural designer, Structural properties of concrete and steel. Behavior of concrete under compression (stress-strain curve) and tension, and steel under tension. Design philosophies. Concept of transformed section, singly and doubly R. C. sections.

Classification of limit states. Characteristic strengths and loads. Partial safety factors. Analysis of R. C. section under flexure – assumptions, strain, and stress variation across the section. Behavior of R. C. section under flexure (under reinforced, Balanced, and over reinforced sections). Design parameters for rectangular R.C. section, Moment of resistance of rectangular under reinforced singly, doubly, and flanged R. C. section.

#### Unit II– Design for flexure using LSM

Loads and load combinations. Stability of a structure and code provisions (Actions on a structure, failure behavior and safety). Limit state of serviceability: IS code recommendation for limit state of deflection, cracking and fire.

Design for flexure: Design of rectangular under reinforced singly, doubly, and flanged RC section using LSM.

Vishwakarma Institute of Information Technology, Pune-48

(An Autonomous Institute Affiliated to Savitribai Phule Pune University)

## **Department of Civil Engineering**

## Unit III – Design for shear, torsion, and bond

Modes of cracking. Shear transfer mechanism. Shear failure modes. Nominal shear stress. Critical sections for shear design. Shear resistance of RC section. Design of RC section subjected to shear as per Indian Standard Code.

Behavior of RC member under torsion. Torsional shear stress. Need for torsional reinforcement. Indian Standard Code provisions for design RC member subjected to torsion. Concept and types of bond. Bond development mechanism. Bond failure mechanism. Check for adequacy of bond as per Indian Standard Code requirements.

#### Unit IV – Design of slabs and staircases

Design and reinforcement detailing of one-way slabs (Simply supported, cantilever and continuous) and dog legged staircase using Indian Standard code.

Design and reinforcement detailing of two-way slabs using Indian Standard code. Distribution of slab load on beams.

#### Unit V– Design of short column

Column: Introduction, Indian Standard code requirements for design and reinforcement detailing of short column. Design and reinforcement detailing of short column for axial load, uni-axial and bi-axial bending using interaction curves

#### **Unit VI – Design of column footing**

Isolated column footing: Soil pressure distribution under isolated footing. General design considerations for isolated footing slab for flexure, shear, bearing and bond. Design and reinforcement detailing of isolated column footing using Indian Standard code.

#### **Term Work**

Any seven assignments from the list below (Assignments 1, 6 and 9 mandatory) and the detailing of the section to be shown using any drafting software

- 1. Report on one site visit
- 2. Design of Singly Reinforced Simply Supported Tee beam for flexure and shear with all necessary checks (deflection, development length) and curtailment of main reinforcement
- 3. Design of Doubly Reinforced Simply Supported rectangular beam for flexure and shear with all necessary checks (deflection, development length) and curtailment of main reinforcement
- 4. Design of Three Span Continuous Beams for Flexure and Shear with all necessary checks (deflection, development length) and curtailment of main reinforcement
- 5. Drawing structural plan for G+1 building and designing of a typical floor of a building having one way and two-way slabs with different boundary conditions with all necessary checks (at least 1 one-way slab and 2 two-way slabs)
- 6. Design of Dog Legged stair Case
- 7. Design of short column subjected to axial load and uni-axial bending using interaction curves Design of short column subjected to axial load and bi-axial bending using interaction curves
- 8. Design of rectangular isolated column footing
- 9. Any one of the above exercises using any software/ spreadsheets

#### Note:

T.Y. B. Tech. (Pattern 2020)

Highway cross section elements; sight distance, design of horizontal alignment; design of vertical alignment; design of intersections, problems, Highway drainage, Importance of highway drainage, subsurface and surface drainage systems.

### Vishwakarma Institute of Information Technology, Pune-48

(An Autonomous Institute Affiliated to Savitribai Phule Pune University)

## **Department of Civil Engineering**

## Unit II: Traffic engineering and Pavement materials

Traffic Characteristics, traffic engineering studies, traffic flow and capacity, traffic regulation and control devices (signs, signals, islands, road markings); Accident studies, types of road intersections; parking studies; highway lighting.

Materials used in Highway Construction and related tests - Soil subgrade and CBR Test, Stone aggregates, bituminous binders, bituminous paving mixes, viscosity-based gradation of bitumen, Modified Bitumen (Cutbacks, Emulsions, Crumbed Rubber Modified Bitumen CRMB, Polymer Modified Bitumen-PMB, Foamed Bitumen), Marshall Stability Mix Design and Test (All 5 test parameters).

## **Unit III: Bridge Engineering**

**Introduction:** Components of bridges, Classification and all types of bridges, preliminary data to be collected during investigation of site for bridges, economical span, afflux, HFL, scour depth and clearance, locations of piers and abutments, factors influencing the choice of bridge super structure, approach roads. Loads on bridges and substructure: Brief specifications of different loads, forces, stresses coming on bridges, IRC load specification, requirements of traffic in the design of highway bridges, Abutment, Piers, and wing walls with their types based on requirement and suitability.

**Bearing:** Definition, purpose and importance. Types of bearings with their suitability. **Erection of bridge super structure and maintenance:** Introduction to different techniques of erection of bridge super structure and maintenance of bridges.

## **Unit IV: Airport Engineering**

**Introduction:** Advantages and limitations of air transportation. Aeroplane component parts and important technical terms.

Airport planning and Airport layout: Aircraft characteristics, which influence judicious and scientific planning of airports, Selection of sites, survey and drawings to be prepared for airport planning.

Characteristics of good layout, runway configuration, airport obstruction, location of terminal buildings, aprons and hangers. Zoning requirements regarding permissible heights of constructions and landing within the airport boundary.

**Runways and taxiways:** Runway orientation, wind coverage, use of wind rose diagram, basic runway length, corrections for elevation, temperature and gradient as per ICAO and FAA recommendation. Airport classification by ICAO.

## Unit V: Railways

Permanent way, Track structure of BG, Functions of rail, Standard rail, tilting of rail, Coning of wheels, Types of sleepers, Fastenings, Ballast, Modern development in railways- metro rails, mono rails, bullet train. Rail joints, types, evil effects, remedial measures, Welding of rails, Short and long welded rails, Types of gradients, Curves, Grade compensation on curves, Alignment, Super elevation, Equilibrium cant, Equilibrium speed, Maximum permissible limits for cant, Cant deficiency, Cant excess, Speed on curves, Safe speed on curves using Indian railways formula only for fully transition curves, Concept of negative cant, Points, crossings and turnouts- functions, Components, elements of points, Types of crossings and turnouts, Track maintenance: Regular and Periodic.

## Unit VI: Tunnel Engineering and Dock & Harbor

**Tunnels -** functions & types, criteria for selection of size & shape. Pilot tunnel, shaft, portal, Methods of tunneling in hard and soft ground (Needle beam, NATM, TBM & earth pressure balance method, drilling & blasting). Various operations in tunneling like mucking, drainage in tunneling- Pre drainage and permanent drainage, Ventilation in tunneling (temporary and permanent), Micro tunneling and trenchless tunneling.

T.Y. B. Tech. (Pattern 2020)

Vishwakarma Institute of Information Technology, Pune-48

(An Autonomous Institute Affiliated to Savitribai Phule Pune University)

## **Department of Civil Engineering**

**Dock & Harbour** -Introduction, Requirements of harbors and ports, Classification of harbors with examples, Selection of site for harbor. Various components of ports, Break waters- types, comparison, design criteria, methods of construction, Tetra pod, Tri bar, Hexapod, Quay wall, Wet & dry dock, Floating dock, Wharves, Jetties, Types of fenders, Dolphin. Dredging techniques.

## Term work shall consist of the following:

## Practicals:

- A Tests on Aggregate (Any Five):
- 1. Aggregate Impact and Crushing Value Test
- 2. Los Angeles Abrasion Test
- 3. Shape Test (Flakiness Index and Elongation Index)
- 4. Specific Gravity and Water Absorption Test by basket method
- 5. Stripping Value Test
- 6. Soundness Test

## B. Tests on Bitumen (Any Five + No. 8 compulsory):

- 1. Penetration Test
- 2. Ductility Test
- 3. Viscosity Test
- 4. Softening Point Test
- 5. Flash Point & Fire Point Test
- 6. Specific Gravity Test
- 7. Bitumen Extraction Test
- 8. Marshall Stability Test

## C. Technical visits to 1) Bridge site/Airport/Railway/Tunnel and 2) Hot mix Plant with detailed report

## Textbooks:

- 1. F. L. Mannering, Scott S (2011), "Washburn Principles of Highway Engineering and Traffic Analysis", Wiley India
- 2. S.K. Khanna and C.E.G. Justo (2011), "Highway Engineering" Nem Chand and Brothers, Roorkee

Vishwakarma Institute of Information Technology, Pune-48

(An Autonomous Institute Affiliated to Savitribai Phule Pune University)

## **Department of Civil Engineering**

## **Unit IV – Deep Foundations**

Introduction, Pile classification, Pile installation techniques. Load carrying capacity of pile by static method, Dynamic Methods-Engineering news formula and Modified ENR formula. Pile load test and Cyclic Pile load test. Group action-Field rule, Rigid block method. Negative skin friction. Settlement of pile group incohesive soil by approximate method. Piers and Caissons- Definition, Types and uses. Well foundation: components, sand island method.

## Unit V – Cofferdams and Foundation on Black Cotton Soils

Cofferdam uses and features. Characteristics of black cotton soil, swelling potential and its evaluation methods, engineering problems, Swelling pressure measurement, Foundations on black cotton soil: design principles, Construction techniques in B.C soils, under reamed piles- Design principles. Stone columns, prefabricated vertical drains, preloading technique, and vibroflotation technique.

## Unit VI – Soil Reinforcement and Earthquake Geotechnics

Basic components and Mechanism of reinforced soil. Geosynthetics: type's, functional properties, and requirements. Geosynthetics applications in Civil Engineering.

Earthquake Terminology, Sources of earthquakes. Seismic waves, Location of earthquakes, Size of earthquake, Characteristics of Strong ground motion, Seismic hazards- liquefaction, Effect of

liquefaction, Evaluation of liquefaction susceptibility, liquefaction hazard mitigation.

## **Textbooks:**

1. Soil Mechanics and Foundation Engineering by Dr. B.C. Punmia, Laxmi Publications

- 2. Dr. B. J. Kasmalkar, "Foundation Engineering", Pune Vidyarthi Griha Prakashan, Pune
- 3. Principles of Soil Mechanics and Foundation Engineering by V.N.S. Murthy, UBS Publishers

#### **Reference books:**

- 1. Soil Mechanics—T. William Lambe--Wiley
- 2. J. E. Bowels, "Foundation Analysis and Design", McGraw-Hill
- 3. Foundation Engineering-P. C. Varghese--- PHI Learning Pvt. Ltd.
- 4. Soil Mechanics and Foundation Engineering- V. N. S Murthy, Marcel Dekker, Inc. Newyork..
- 5. Soil Mechanics & Foundation Engineering—Rao--Wiley
- 6. A. K. Arora, "Soil Mechanics and Foundation Engineering", Standard Publishers, 2009.
- 7. Engineering in Rocks for Slopes. Foundations and Tunnels—T Ramamurthy—PHI Learning
- 8. Geotechnical Engineering by Conduto, PHI, New Delhi.
- 9. Foundation Design Manual: N V Nayak, Dhanpat Rai Publications.
- 10. International Steven Kramer, "Geotechnical Earthquake Engineering", Prentice Hall Publications.

11. Practical Handbook of Grouting : Soil-Rock and Structures---James Warner—Wiley

(An Autonomous Institute Affiliated to Savitribai Phule Pune University)

## **Department of Civil Engineering**

## **Professional Elective – I**

# Construction Management CVUA31205A)

Teaching Scheme	Examination Scheme							
Credits: 3 Lecture (L): 3 hrs./week	CIE	ISE	SCE	ESE	PR/OR	TW	Total	
Tutorial (T): 0 hr./week Practical (P): 2 hrs./week	20	30	20	30	25	-	125	

#### **Course Objectives**:

- 1. To understand role of construction industry in infrastructure development.
- 2. To demonstrate the use of work study charts and conduct time studies.
- 3. Use of mathematical models for risk assessment and materials management.
- 4. To study the legal concepts within which construction contracts are establish, documents and contract administration
- 5. To enhance knowledge about construction equipment's this can be used effectively.
- 6. To study the concepts of Information systems and their applications.

Course Outcomes: Upon completion of the course, students will be able to

- 1. Understand project planning and scheduling techniques
- 2. Implement work study and value engineering for construction project
- 3. Understand the financial issues of determining the monetary resources needed by a business, the sources and uses of funds, the benefits and risk management
- 4. Explain Processes in material management, EOQ model and construction contracts
- 5. Identify construction equipment and apply depreciation and replacement analysis
- 6. Understand the role of management information systems in construction management

## Unit I – I – Project Planning & Scheduling.

Work Breakdown Structure (WBS), Gantt /Bar chart, Network Analysis, C. P. M.- . Activity on Arrow (A.O.A.), Critical path and type of floats, Precedence network analysis (A.O.N.), Network Crashing – Time- Cost – Resource optimization, P. E. R.T.

#### Unit II– Work study and value engineering

Work Study: Definition, Objectives, basic procedure, method study and work measurement, work study applications in Civil Engineering. Method study – Definition, Objective, Procedure for selecting the work, recording facts, symbols, flow process charts, multiple activity charts, string diagrams. Work measurement, Time and motion studies, Concept of standard time and various allowances, time study, equipment performancerating. Activity sampling, time-lapse photography technique, Analytical production studies. Meaning of value, value analysis, value engineering and value management, energy resources, consumption patterns, energy cost escalation and its impact.

**Vishwakarma Institute of Information Technology, Pune-48** (An Autonomous Institute Affiliated to Savitribai Phule Pune University)

## **Department of Civil Engineering**

## Unit III – Financial aspects and Risk Management of construction projects

Capital investments: importance and difficulties, means of finance, working capital requirements, projectcash flow projections and statements, project balance sheet, profit loss account statements.

Introduction, principles, types, origin, risk control, use of mathematical models: sensitivity analysis, breakever analysis, simulation analysis, decision tree analysis, risk identification, analysis and mitigation of

#### project risks, role of insurance in risk management. **Unit IV – Materials management and contracts**

Cint I V – Materials management and contracts

Materials flow system, role of materials management in construction management and its linkage withothe functional areas, vendor networking, buyer-seller relationships, E material codification and classification concept of logistics and supply chain management. Inventory models- EQQ models withvariations. Introduction- Definition-Essential ingredients of tender- principles to be followed in the consideration and acceptance of tenders. bid cycle, tender and contract documents, contract conditions, study of contract documents of State PWD and CPWD. Standard agreements. Indian Contract Act 1872; Need, provisions, scope for modifications /improvement. Rules of interpretation of contracts. Introduction to legal terms used in construction contracts.

#### **Unit V– Equipment Management**

Introduction to construction Equipment's, Identification, Planning of equipment – Selection of Equipment Management in Projects - Maintenance Management

Equipment cost – Operating cost – Cost Control of Equipment - Depreciation Analysis – Replacement of Equipment- Replacement Analysis.

## **Unit VI – Management Information system**

Introduction to Management Information systems (MIS) Overview, Definition. MIS and decision support systems, Information resources, Management subsystems of MIS. Management information system structure based on management activity whether for Operational control, management control or strategic

planning. role of ERP in materials management – material resource information systems

#### **Textbooks:**

- 1. Prasanna Chandra, "Projects Planning, Analysis, Selection, Implementation and Review", Tata McGraw Hill Publications.
- 2. P. K. Joy,"Total Project Management The Indian Context", -MacMillian Publications
- 3. Gopal Krishnan & Sunderasan, "Materials Management", Prentice Hall Publications.
- 4. Bhat, "Management Principal, process, and practices", Oxford University Press.
- 5. Shrivastava, "Financial management", Oxford University Press
- 6. Gordon B. Davis, Margrethe H. Olson, "Management Information Systems", Tata McGraw Hill Publ. Co.
- 7. S.C Sharma, "Construction Equipment's & its Management", Khanna Publication
- 8. Dr. V. K. Raina, "Construction Management practice and contract management practice",2<sup>nd</sup>Edition,SPD publications, New Delhi.

- 7. Dr. S. Rajaram and Dr. M. Sivakumar, "Total Quality Management ",Biztantra
- 8. Sunil Sharma, "Total Engineering Quality Management", Macmillan India Ltd.

#### **List of Practicals**

1. Site Visit to a Construction project to study following documents and preparing a report -(2)

- a. Project Cash Flow Analysis.
- b. Project Balance Sheet.
- c. Materials Flow System in the Project.
- 2.Assignment on CPM (2)
- 3. Assignment on PERT (2)
- 4. Study of various contracts related to construction Industry (2)
- 5. Assignment on sensitivity analysis, break even analysis, simulation analysis, decision tree analysis (2)
- 6. Assignment on Work Study and work measurement on any two Construction Trades. (2)
- 7. Assignment on EOQ Model and its variation. (2)
- 8. Assignment on Equipment Management. (2)
- 9. Assignment on MIS in construction industry. (2)
- 10. Seminar on any one topic from syllabus (2)

(An Autonomous Institute Affiliated to Savitribai Phule Pune University)

observations.							
Unit II: Theory of Errors & Triangula	ation Adj	justment					
Kinds of errors, Laws of weights, Det independent quantities, Method of L determination, Distribution of error to to Station and figure adjustment of Geo Calculations of spherical excess and side	Least Squ the field detic Qu	uares, In measurer adrilatera	direct of nents, No al withou	bservatio ormal equ	ns, Proba ation, M	able erro ethod of	or and its correlates

## Vishwakarma Institute of Information Technology, Pune-48

(An Autonomous Institute Affiliated to Savitribai Phule Pune University)

## **Department of Civil Engineering**

## Unit III: Geodesy & Satellite Based Positioning System

a) Geodesy - Definitions and fundamentals, Geoid and Ellipsoid of rotation, Reference surface, Geodetic systems, Indian Geodetic System, Coordinate systems and transformation.

b) Introduction to Satellite based positioning systems (SBPS), SBPS systems - GPS, Glonoss, Galileo, Navic, Compass, etc. and their features, Segments of SBPS (Space, Control and User), their importance and role in SBPS, Positioning with SBPS - Absolute & Differential Methods, Use of SBPS in Surveying, SBPS Co-ordinates & heights, Factors governing accuracy in SBPS positioning, Different types of errors in SBPS Positioning.

## **Unit IV: Remote Sensing**

Introduction and definition, development of remote sensing technology and advantages, different platforms of remote sensing, EM spectrum, solar reflection and thermal emission remote sensing, interaction of EM radiation with atmosphere including atmospheric scattering, absorption and emission; interaction mechanisms of EM radiation with ground, spectral response curves, principles of image interpretation, multi-spectral scanners and imaging devices, salient characteristics of LANDSAT, IRS, Cartosat, ResourceSat etc. sensors, image characteristics and different resolutions in Remote Sensing; manual and digital image interpretation techniques; Remote Sensing integration with GIS and GPS, Georeferencing Technique, spatial filtering techniques; Remote sensing for underground utility mapping; Image classification techniques, Hyperspectral Remote Sensing, applications of RS, Limitations of Remote Sensing Technique.

#### **Unit V: Geographical Information System**

Introduction & definition, different components, types of vector data, Raster data models and their types, TIN data model; Advantages and disadvantages associated with vector, raster and TIN, Non-spatial data (attributes) and their type, Raster data compression techniques, Different raster data file formats, Spatial database systems and their types; Pre-processing of spatial datasets, Different map projections, Spatial interpolation techniques, Different types of resolutions, Digital Elevation Model (DEM); GIS analysis and applications, Errors in GIS, Key elements of maps

## **Unit VI – Aerial Photogrammetry**

Objects, Classification- qualitative & quantitative photogrammetry Applications, comparison of map and aerial photograph, Vertical, Tilted and Oblique photographs, Scale of & Relief displacement in vertical photograph, Stereoscopic parallax & its measurement by parallax bar. Mirror stereoscope, Differential height from differential parallax. Ground control points (GCPs), Flight planning.

## Term Work:

# Geodetic Surveying and Trigonometrical levelling (any three)

- 1. Measurement of horizontal and vertical angles with 1" theodolite.
- 2. Determination of elevation of inaccessible objects by trigonometrical levelling.
- 3. Practical based on various special functions available in a total station such as remote elevation measurements, remote distance measurements and co-ordinate stakeout.
- 4. Establishing control station using single or dual frequency GPS receiver

# **Remote Sensing**

- 1. Study and applications of different RS data products available with National Remote Sensing Centre (NRSC)
- 2. Use of RS images and visual interpretation

## GIS

**1.** Use of interface and tools in GIS software such as GRAM++ or QGIS or equivalent software. **Aerial Photogrammetry (any two)** 

1. Study of aerial photograph and finding out the scale of the photograph.

Vishwakarma Institute of Information Technology, Pune-48

(An Autonomous Institute Affiliated to Savitribai Phule Pune University)

## **Department of Civil Engineering**

- 2. Determination of air base distance using mirror stereoscope.
- 3. Determination of difference in elevation by parallax bar.

#### **Project:** (Any one)

- 1. Adjustment of geodetic quadrilateral without central station by method of correlates.
- 2. Field survey (500 sq.m.) using GPS (Control as well as mapping).

#### **Textbooks:**

- 1. R. Subramanian, (2012) "Surveying & Levelling", Oxford University Press
- 2. Dr. B. C. Punmia, (2005) "Surveying: Vol. II", Laxmi Publication New Delhi.

## Department of Civil Engineering Professional Elective – I

Advanced Structural Analysis (CVUA31205C)									
Teaching Scheme		Ε	xaminati	on Schen	ne				
Credits: 4 Lecture (L): 3 hrs./week	CIE	ISE	SCE	ESE	PR/OR	TW	Total		
Tutorial (T): NA Practical (P): 2 hrs./week	20	30	20	30	-	25	125		

## **Course Objectives:**

• To prepare the students to analyze indeterminate beams, trusses and frames having degree of indeterminacy up to two

Course Outcomes: Upon completion of the course, students will be able to

- 1. **Apply** influence line diagram concept for determining maximum shear force and bending moment in a beam subjected to uniformly distributed load, two concentrated loads and series of concentrated loads
- 2. **Analyse** the two hinged arch to determine the support reactions, radial shear and normal thrust at any section
- 3. Use the central difference operator for finding out the deflection of simply supported beam subjected to concentrated loads and uniformly distributed load
- 4. Understand the basic concepts of Theory of Elasticity and Finite Element Method
- 5. **Develop** the generalized stiffness matrix for the analysis of bar and beam element
- 6. **Develop** the generalized stiffness matrix for the analysis of plane truss

## Unit I – Rolling Loads

Maximum shear force and bending moment in a beam supporting uniformly distributed load, Maximum shear force and bending moment in a beam supporting two concentrated loads, Maximum shear force and bending moment in a beam supporting a series of concentrated loads

#### **Unit II–Two Hinged Arches**

Introduction, support reactions and radial shear and normal thrust for two hinged parabolic arch at the same level and different level, support reactions and radial shear and normal thrust for two hinged circular arch at the same level

## **Unit III – Finite Difference Method**

Finite Difference Method – Introduction, application to deflection problems of determinate beams by central difference method

#### **Unit IV: Introduction to Finite Element Method**

Theory of elasticity: Strain-displacement relations, compatibility conditions in terms of strain, plane stress and plane strain problems, differential equations of equilibrium, compatibility condition in terms of stresses, stress-strain relations in 2D and 3D problems. General steps of the finite element method, Applications and advantages of FEM, concept of finite element for continuum problems, discretization of continuum, use of polynomial displacement function, Pascal's triangle, convergence criteria.

Vishwakarma Institute of Information Technology, Pune-48

(An Autonomous Institute Affiliated to Savitribai Phule Pune University)

## **Department of Civil Engineering**

#### Unit V: Stiffness Matrix and Boundary Conditions for bar and beam

Bar element: stiffness matrix, load vector, assembly of element matrices implementing boundary conditions, stress calculations , support reactions

Beam element : Introduction, Derivation of Element Stiffness Matrix, Generalized Stiffness Matrix of a Beam Member, stress calculations ,support reactions

#### Unit VI: Stiffness Matrix and Boundary Conditions for Truss

Introduction, Element Stiffness of a Truss Member, Member Stiffness with Varying Cross Section, Generalized Stiffness Matrix of a Plane Truss Member, Analysis of Truss.

#### Term Work

At least two assignments on each unit

# Design Project - I (CVUA31206)

Teaching Scheme	Examination Scheme							
Credits: 2 Lecture (L): 1 hrs./week	CIE	ISE	SCE	ESE	PR/OR	TW	Total	
Tutorial (T): NA Practical (P): 2 hrs./week	-	-	-	-	-	25	25	

## Prerequisite course(s): Basic Mathematics

## **Course Objective(s):**

- 1. To make students aware of various soft computing techniques in general and Artificial Neural Networks in particular, giving details about its working and analogy with Biological Neural networks.
- 2. To give students ideas about designing and training an Artificial Neural network using different algorithms to solve univariate and multivariate time series problems.

## **Course Outcomes:**

Upon completion of the course, students will be able to

1. Understand ANN as AI, soft computing and data driven technique and describe its types and various network training algorithms as well as compute the Net information for given components of neuron

2. Determine various design related aspects of ANN namely architecture, stopping criteria, performance function, overfitting and design, train, test 2 or 3 layered Feed forward back propagation neural network for time series and cause effect models.

## Unit I – Artificial Neural Networks

Introduction to Artificial Intelligence, soft computing techniques, Data driven modeling, ANN as AI, Soft computing and data driven technique, ANN- history and general properties, ANN types according to architecture and Neuro-Dynamics, ANN Vs empirical, statistical, physical, physics based models, Biological Neural Network, Artificial Neuron, Components of artificial neuron, methods of computing net information, Activation functions (linear, sigmoidal, hyperbolic tangent, hard limiter soft-lin), perceptron, Multi-layered perceptron (MLP), Network training, Pre-training procedures- data normalization, network initialization, Types of training-Supervised and un-supervised, Network training using Standard back propagation algorithm or gradient descent algorithm, introduction to Network training using conjugate gradient, resilient back propagation, Broydan-Fletcher-Goldfarb-Shanno algorithm, One step secant algorithm, Levernberg-Marquardt algorithm, Network architecture, stopping criteria, overfitting, validation, testing, data division, performance function, Evaluating model performance, Recurrent networks, Radial basis function networks.

## Unit II: Applications of ANN in Civil Engineering and Design of ANN

Time series (univariate and multivariate) models, cause-effect models, Applications in Civil engineering Designing a FFBP ANN using the given data set.

#### **Term Work:**

Students should work on a small project work wherein they need to design a FFBP ANN Model based on time series (univariate or multivariate) / cause-effect data provided to them.

# Structural Design and Drawing II (CVUA32201)

Teaching Scheme	Exami	nation So	cheme				
Credits: 4	CIE	ISE	SCE	ESE	PR/OR	TW	Total
Lecture (L): 3 hrs./week Tutorial (T): NA							
Practical (P): 2 hr./week	20	30	20	30	25	50	125
Prerequisite course(s): Engineering Mech	hanics, N	lechanics	s of Solid	s -I, Mec	hanics of S	Solids -II	u
Course Objectives:							
To develop the ability to understand the effective of the							
behavior of members & connections in st							
concepts in design of various steel structu	-	L .		1			
The practical sessions will help the studen							
knowledge of design and drafting of communication skills.	various	structur	al comp	onents v	with the	oral and	written
Course Outcomes:							
Upon the completion of the course, studen	ts will be	able to					
1. Explain Limit state design philoso			steel stru	ctures, ty	vnes of stee	el structure	es, steel
code provisions and design bolted		0			-		
Standard code.				0	0	0	
2. Design the structural elements sub	jected to	axial ten	sile and o	compress	ive forces	along with	1 stable
connections using the guidelines g	iven in Ir	dian Sta	ndard coo	le.		U	
3. Design rolled and built-up colum	ns and c	olumn ba	ases alon	g with s	table conn	ections us	ing the
guidelines given in Indian Standard							
4. Design laterally restrained and un			for limit	state of	strength a	and service	eability
using the guidelines given in India							
5. Analyze and design the truss and g							
6. Explain the concept of welded pla	0		0			-	<u> </u>
including stiffeners and its connect	tions usin	ig the gui	delines g	iven in I	ndian Stan	dard code.	
Unit I – Design philosophy and Design o	foonnog	tions					
Introduction to Steel Structures & their	• •		-		-		
Types/grades of structural steel, Mechanic							
specifications such as IS:800-2007, IS:80		-					
Philosophy of limit state design for strengt							
design load combinations, Classification	of cross	section	such as	plastic, c	compact, s	enn-comp	act and

slender. Bolted Connections: Types/grades of bolts, Behavior of bolted joints, Strength of joint/connection, efficiency of joint, Design of bolted connections subjected to tension, compression and moment.

Welded Connections: Types & properties of welds, Types of welds, codes for welded connections, Design of welded connections subjected to tension, compression and moment.

## Vishwakarma Institute of Information Technology, Pune-48

(An Autonomous Institute Affiliated to Savitribai Phule Pune University)

## **Department of Civil Engineering**

## Unit II - Design of Tension and Compression members

Tension members: Behavior, Modes of failures, various cross sections such as solid threaded rod, cable and angle sections. Limit strength due to yielding, rupture and block shear. Design of tension member: using single and double angle sections, connections of member with gusset plate by bolts and welds.

Compression members: Behavior, Modes of failures, Buckling classification as per geometry of cross section, buckling curves, design of struts in trusses using single and double angle section, connections of members with gusset plate by bolts and welds.

#### Unit III – Design of Columns and column bases

Design of columns subjected to axial load using rolled steel section. Design of built-up column, lacing and battening and its connections. Concept of eccentrically loaded column.

Design of column bases: Design of slab base, gusseted base and moment resistant base (axial load and uniaxial bending).

## **Unit IV – Design of Beams**

Design of Beams - laterally restrained, simply supported beams using single rolled steel section with and without flange plate, curtailment of flange plates, strength in flexure, low and high shear, check for web buckling, web crippling and deflection.

Design of Beams - laterally unrestrained, simply supported beams using single rolled steel section with and without flange plate, curtailment of flange plates, strength in flexure, low and high shear, check for web buckling, web crippling and deflection.

## Unit V – Design of Truss and Gantry girders

Roof truss: Types of loads acting on industrial structures, Introduction to IS Codes & specifications: IS 875 (part –I, II & III), assessment of dead load, live load and wind load for roof truss as per IS 875 (part –I, II & III), design of purlin, design of members of a truss, detailing of typical joints and supports. Design of gantry girder: selection and design of cross section, check for moment capacity, buckling resistance, bi-axial bending, serviceability and fatigue strength.

## Unit VI – Design of Welded Plate Girder

Concept of plate girder, components of welded plate girder, intermittent weld, design of cross section, curtailment of flange plates, end bearing, load bearing, and intermediate stiffeners, design of connection between flange & web plate and web plate & stiffeners, check for shear buckling of web, shear capacity of end panel and serviceability condition.

#### Term Work

A) Four full imperial size drawing sheet showing structural detailing of 16 sketches based on syllabus. (Hand drawn)

B) Design of industrial building including roof truss, purlin, gantry girder, column, column base and connections. Use of suitable software for analysis of truss. Three full imperial size hand drawn drawing sheets presenting design details.

C) Design of welded plate girder: design of cross section, curtailment of flange plates, stiffeners and connections. One full imperial size drawing sheet presenting design details using any suitable software.D) At least one site visit based on industrial steel structure or welded plate girder. Report should contain structural details with sketches.

Credits: 4 Lecture (L): 3 hrs./week	CIE	ISE	SCE	ESE	PR/OR	TW	Total				
Tutorial (T): NA Practical (P): 2 hr./week	20	30	20	30	25	50	125				

#### **Course Objectives:**

- Study of process used in waste water treatment
- To prepare students with an ability to understand designing of Waste water treatment system and apply same in future.
- To increase the awareness amongst the students for Importance of waste water & their management.

#### Course Outcomes: At the end of the course the students will be able to:

- 1. Explain the process used in waste water treatment
- 2. Analyze the Characteristics of sewage
- 3. Design preliminary and primary treatment units for sewage treatment
- 4. Design of Secondary Biological treatment unit
- 5. Develop an ability to design STP plants.
- 6. Develop Low cost treatment & advance treatment methods of waste water

#### Unit I - Waste Water and Treatment Concept

Fundamentals of waste water, types of waste water , unit operation and process, treatment system such as preliminary, primary, secondary and tertiary, functions of treatment plant.

flow rate concept of mass flow rate, types of reaction and reactors.

Concept for HRT, SLR, WLR, OLR, F/M ratio, horizontal and settling velocity, generation rate of waste water, method of sampling.

#### Unit II - Characteristics of sewage, stream sanitation

Characteristics of sewage: physical, chemical and biological, effluent standards as per CPCB/MPCB norms.,

Stream sanitation: Self-purification of natural streams, Oxygen Sag Curve, Streeter -Phelps equation and terminology (without derivation and numerical).

#### Unit III – Design of preliminary and primary treatment units for sewage treatment

Analysis of flow measurement, equalization basin, screen chamber, grit chamber, oil and grease trap. Design of circular sanitary sewers pipe system. Design of primary and secondary sedimentation tank.

#### Unit IV- Biological treatment of waste water

Secondary Biological treatment unit: Suspended growth process, consideration of HRT, MCRT,F/M ratio, OLR, Qty. of oxygen required, Power required, sludge production, sludge flow rate, recycling ratio Secondary Biological treatment unit: Attach growth process.

Tricking (NRC equation), introduction to bio- towers

# Vishwakarma Institute of Information Technology, Pune-48

(An Autonomous Institute Affiliated to Savitribai Phule Pune University)

## **Department of Civil Engineering**

#### Unit V- Anaerobic biological treatment of waste water and sludge treatment

Anaerobic treatment process, anaerobic reactor types. Principle of anaerobic digestion, stages of digestion, factors governing anaerobic digestion, Dewatering of sludge by gravity thickener, sludge drying bed, decanters. Methods of sludge treatment and disposal, advantages & disadvantages. Up-flow Anaerobic Sludge Blanket (UASB) Reactor–Principle, advantages & disadvantages.

#### Unit VI- Low cost treatment & advance treatment methods of waste water

Oxidation pond: Bacteria –algae symbiosis, oxidation pond as per the manual of CPHEEO, advantages & disadvantages of oxidation ponds.

Aerated lagoons: Principle, aeration method, advantages & disadvantages of aerated Lagoons, Removal of nutrient process such as phosphate, nitrate from waste water.

## List of practical – (Any Six of the following)

- 1. Determination of dissolved oxygen
- 2. Determination of biological oxygen demand
- 3. Determination of chemical oxygen demand
- 4. Determination of sludge volume index.
- 5. Determination of phosphate or nitrate
- 6. Determination of solids such as suspended, total, fixed
- 7. Determination of total dissolved solids by conductivity method
- 8. Visit to sewage treatment plant (STP)
- 9. Design of 1 MLD STP by using any software or excel sheet.

Vishwakarma Institute of Information Technology, Pune-48

(An Autonomous Institute Affiliated to Savitribai Phule Pune University)

#### **Department of Civil Engineering**

#### **Unit III – Specifications and Rate Analysis**

**Specifications:** Meaning & purpose, types. Drafting detailed specifications for materials, quality, workmanship, method of execution, mode of measurement and payment for major items like, excavation, stone/ brick masonry, plastering, ceramic tile flooring, R.C.C. work.

**Rate Analysis:** Meaning and factors affecting rate of an item of work, materials, sundries, labour, tools & plant, overheads & profit. Task work or out turn, factors effecting task work. Working out Rate Analysis for the items mentioned in specifications above.

#### Unit IV – Valuation

Valuation: Purpose of valuation. Meaning of price, cost, and value. Factors affecting Value.

**Types of value**: Fair Market Value, Book Value, Salvage, Scrap Value, Distressed Value and Sentimental Value. Concept of free hold and lease hold property. Estimation versus valuation. Methods of depreciation & obsolescence, Sinking Fund, Years Purchase.

**Methods of Valuation of Building:** Rental Basis, Land & Building basis, Direct Comparison Method, profit based method, Belting of Land, Development method

#### **Unit V– Tendering**

**Tenders**: Definition. Methods of inviting tenders, tender notice, tendering procedure, Pre and post qualification of contractors, tender documents. 3 bid/ 2 bid or single bid system. Qualitative and quantitative evaluation of tenders. Comparative statement, Pre-bid conference, acceptance/ rejection of tenders. Various forms of BOT &Global Tendering, E-tendering. (A mockup exercise of preparation, submission, opening of tender documents is suggested).

#### **Unit VI – Contracts**

**Contracts**: Definition, objectives & essentials of a valid contract as per Indian Contract Act (1872), termination of contract. Types of contracts: only lump sum, item rate, cost plus. Conditions of contract: FIDIC document, standard contract conditions published by MOS and PI.

**Conditions of contract**: General and Specific conditions. Condition regarding EM, SD, time as an essence of contract. Important conditions regarding addition, alteration, extra items, testing of materials, defective work, subletting, powers delegated to Engineer in charge regarding the above aspect, defect liability period, retention money, interim payment or running account bills, advance payment, secured advance, final bill. Settlement of disputes viz. dispute resolving board, arbitration, concept of partnering. Liquidateddamages, termination of contract.

#### Term Work

#### Term Work: The following exercises should be prepared and submitted:

1. Report on contents, use of current DSR & Drafting detailed specification for major items of works.

2. Working out quantities using C-L and PWD method for a small single storied load bearing structure up to plinth and Preparing Abstract Sheet using DSR(Regional)

3. Detailed Estimate of a single storied R.C.C framed building using D.S.R.

4. Working out quantities of steel reinforcement for a column footing, a column, a beam and a slab by preparing bar bending schedule.

5. Working out rate analysis for the items as in the specifications of Assignment No. 1.

6. Preparing Valuation of a Residential building and writing report using O-1 form.

7. Estimating quantities for any one of the following using appropriate software. a) A Factory Shed of Steel Frame b) Underground Water Tank c) Pipe Culvert d) Road / Railway Track/ Runway

8. Drafting of tender notice, Preparation of Schedule A & B and Conditions of Contract regarding

## **Department of Civil Engineering**

## Professional Elective II Irrigation & Drainage (CVUA32204A)

Teaching Scheme	Examination Scheme							
Credits: 4 Lecture (L): 3 hrs./week	CIE	ISE	SCE	ESE	PR/OR	TW	Total	
Tutorial (T): NA Practical (P): 2hrs./week	20	30	20	30	25	-	125	

Prerequisite course(s): Fluid Mechanics, Hydraulic Engineering, Irrigation Engineering -I

## **Course Objective(s):**

- 1. To impart the knowledge of Soil Water and Crop Relationship
- 2. To introduce students to various aspects of Irrigation and methods.
- 3. To equip the students to design the lift and drip irrigation schemes.
- 4. To expose the students to design the Sprinkler irrigation scheme
- 5. To impart the knowledge of effects of water logging, salinity, and its remedial measures.
- 6. To equip the students to design the drainage system the irrigated land

## **Course Outcomes:**

Upon completion of the course, students will be able to

- 1. Understand Soil Water and Crop Relationship
- 2. Understand the Irrigation techniques in general and canal irrigation in particular
- 3. Design the lift and drip irrigation schemes
- 4. Design the Sprinkler irrigation scheme
- 5. Understand effects of water logging, salinity, and its remedial measures
- 6. Understand the drainage system the irrigated land

## Unit I: Soil Water-Crop Relationship

Crop water Relationship – Crop period, base period, Duty and Delta of a crop, relation between Duty and Delta, factors affecting Duty and delta, Importance of Duty Delta, Cash crops. Optimum utilization of irrigation water, irrigation efficiency, Uniformity coefficient, Consumptive use of water, factors governing consumptive use of water, estimation of consumptive use and assessment water charges, conjunctive use of surface and groundwater. Soil classification, soil moisture Determination of soil moisture, Field capacity, readily available moisture, estimating depth and frequency of irrigation

## **Unit II: Irrigation Practices**

**Irrigation:** Definition, Necessity of irrigation, advantages, disadvantages, and ill effects of irrigation. Types of irrigation systems (Surface and Subsurface irrigation), free flooding, border flooding, check flooding and basin flooding. Factors affecting the choice of irrigation methods, quality of irrigation water. **Canal irrigation system:** alignment of canals, watershed canal, contour canal, side slope canal, distribution system for canal irrigation, main canal, branch and distributaries, minors, gross command area, culturable command area, Intensity of irrigation, area to be irrigated, time factor, capacity factor, full supply coefficient, nominal duty, determination of required channel capacity, channel losses (Evaporation and seepage), Empirical formulas for channel losses.

## Unit III: Lift and Drip irrigation

Lift Irrigation: General concepts, advantages, disadvantages, elements of lift Irrigation schemes, design considerations of Lift irrigation system, distribution systems, concept of cost economics.

**Drip Irrigation:** Definition and functions, types of drip Irrigation systems, components of Drip Irrigation systems. Design and installation of drip Irrigation systems, advantages, and disadvantages of Drip Irrigation systems.

T.Y. B. Tech. (Pattern 2020)

#### Vishwakarma Institute of Information Technology, Pune-48

(An Autonomous Institute Affiliated to Savitribai Phule Pune University)

## **Department of Civil Engineering**

### **Unit IV: Sprinkler Irrigation**

Sprinkler Irrigation: Definition and introduction of Sprinkler Irrigation, advantages and disadvantages of Sprinkler Irrigation, components of sprinkler Irrigation systems (Pumping set, desilting basin and debris screen, main and lateral pipe lines, sprinkler heads, perforated pipes, take off valves and flow control valves, fertilizer applicators), types of sprinklers, basic design of sprinkler irrigation system.

### Unit V- Salt Affected Land and Their Reclamation

Salt accumulation in soil water, classification of salts affecting the soils and their characteristics, reclamation of saline and alkaline soils, leaching and salinity control. Water and wind erosion, design of various types of soil conservation measures.

#### **Unit VI – Drainage of Irrigated Land**

Need and purpose of drainage water logging of agricultural lands and its reclamation, steady state and transient designs of surface and sub-surface drainage systems, drainage by wells. Soil Erosion and conservation.

#### **Term Work**

Term work will include following assignments /exercises (including numerical wherever required): (Any 8)

- 1. Affecting Duty and delta
- 2. Conjunctive use of surface and groundwater.
- 3. Types of irrigation systems,
- 4. Canal irrigation system
- 5. Lift Irrigation
- 6. Drip Irrigation
- 7. Sprinkler Irrigation
- 8. Reclamation of salt affected lands
- 9. Soil erosion and conservation measures
- 10. Water logging

### **Textbooks:**

# Professional Elective II Advanced Concrete Technology (CVUA32204B)

Teaching Scheme	Examination Scheme									
Credits: 4	CIE	ISE	SCE	ESE	PR/OR	TW	Total			
Lecture (L): 3 hrs./week	CIL	ISL	BCL	LSL	INOR	1 **	Total			
Tutorial (T): NA	20	30	20	30	25	50	125			
Practical (P): 2 hr./week		50	20	50	25	50	123			
Prerequisite course(s): Concrete Techn	ology									
Course Objectives:										
To develop the ability to understand the										
concrete mixes. The course will help the										
to assess the condition of reinforced con										
concrete and the mechanism governin	g concrete	perform	ance as	well as	maintenan	ice of rei	nforced			
concrete infrastructure.										
Course Outcomes:										
Upon the completion of the course, stude					<b>.</b>					
1. Explain the microstructure and p					t mineral a	dmixtures	and			
demonstrate the effect of admixt					• ,					
2. Understand a suitable type of spe		-								
3. Describe and justify properties and						1				
4. Analyse characteristics of mix co	onstituents	and desig	gn a conc	rete mix	for field ap	plications	using			
mix proportioning principles.			al 4a agaa		adition of		1			
5. Explain the use of non-destructiv	e techniqu	es as a to	of to asse	ess the co	ondition of	reinforced	L			
concrete structures.	a un dan atn	and and a	haaaaaa	witchle of	tranathanin	a / manain				
6. Understand behaviour of concret technique for maintenance of rein					trengthemi	ig / repair				
7. Evaluate the behaviour of concre					h a raport					
7. Evaluate the behaviour of concre		municau	e ule salli	e unougi	a report.					
Unit I – Mineral Admixtures and Con	nposition o	of Concre	ete							
Review of types mineral admixtures	, origins	and mar	nufacture	of min	eral admi	xtures; cl	nemical			
composition; physical characteristics; ef										
test, applications, mixer blends and blend										
Properties of concrete, w/b ratio, gel sp										
aggregate phase, microstructure of the										
maturity concept of concrete.	-	1								
	· .	•								

## **Unit II - Special Concretes and Concreting Techniques**

Structural Light weight concrete, ultra-light weight concrete, High Density concrete, vacuum concrete, mass concrete, waste material based concrete, Sulphur concrete and Sulphur infiltrated concrete, Jet cement concrete (ultra- rapid hardening), gap graded concrete, high strength concrete, high performance concrete, Self-compacting concrete, Self-curing concrete, Pervious concrete, Geo-polymer concrete, Greenconcrete, Roller compacted concrete, Ferrocement: Properties & specifications of ferrocement materials and techniques, Under water concreting, Hot & Cold Weather concreting, Shotcreting and Guniting.

## Vishwakarma Institute of Information Technology, Pune-48

(An Autonomous Institute Affiliated to Savitribai Phule Pune University)

## **Department of Civil Engineering**

## Unit III – Fibre Reinforced Concrete

Historical development of fibre reinforced concrete (FRC), properties of metallic fibre, polymeric fibres, carbon fibres, glass fibres, Basalt fibres and naturally occurring fibres. Interaction between fibres and matrix (uncracked and cracked matrix), basic concepts and mechanical properties: tension and bending. Properties of hardened FRC, behavior under compression, tension, and flexure of steel fibres and polymeric fibres, GFRC, SFRC, SIFCON - development, constituent materials, casting, quality control tests and physical properties.

## Unit IV – Concrete Mix Design

Guidelines for Quality control & Quality assurance of concrete, Design of concrete using mineral admixtures, Design of pumpable concrete mixes, Design of high strength concrete mixes, Design of self-compacting concrete, Design of Mass concrete.

### Unit V – Advanced Non-destructive Techniques

Concept of Structural Health monitoring, Advanced non-destructive testing methods – Probe penetration, breakoff, Stress wave propagation methods – Ultra sonic Pulse, Acoustic Emission, Impact methods, Electromagnetic methods – Covermeter, Ground Penetration Radar, Infrared Thermography. Corrosion of reinforced concrete and introduction to electrochemistry of reinforced concrete, Electrical methods – Concrete Resistivity, Electrochemical methods – Half cell potential, Polarization resistance.

### Unit VI – Durability and Maintenance of concrete structures

Durability of concrete, Behaviour of concrete under various stress states – uniaxial compression, uniaxial tension, shear, bond, biaxial and multiaxial stresses, Failure modes in concrete, Introduction to concrete fracture mechanics, fracture process zone.

Maintenance of concrete structures, Structural Strengthening of RC structures – Structural strengthening of Beams, Slabs, Columns, Walls, Joints, and connections, Waterproofing of concrete structures, surface treatments for reinforced concrete infrastructures.

## Term Work

The Term work / Lab work will be based on completion of assignments / practical / reports of site visits, confined to the course in that semester.

1. Write a review on any recent research article from standard peer-reviewed journal based on any topic from the syllabus.

2. Concrete mix design and production in lab of any one – Self compacting concrete, Fiber reinforced concrete, high strength or ultra-high strength concrete. Comparison with traditional concrete mix along-with cost analysis is to be clearly stated in the report.

- 3. Perform Fresh (workability tests according to type of concrete, Visual Stability Index) and Hardened (Compressive, tensile, flexural) concrete properties tests as per serial no. 2 mentioned above.
- 4. Experiment on the topics -(1) NDTs, (2) Microscopic examination of concrete.

5. Case study report on any one topic - Structural strengthening of beams / slabs / columns / walls, water proofing of concrete structures, surface treatments for reinforced concrete infrastructures

6. Visit reports on site visit exploring the field and practical aspects of concrete technology.

7. Seminar presentations on Special Concretes and Concreting Techniques.

**Note:** Term Work should include a detailed analysis of practical interpretation, significance and application of test results including above contents and site visit report in form of journal.

## **Department of Civil Engineering**

# **Open Elective-I**

# **Professional Practice, Law and Ethics (IOEUA32205A)**

Teaching Scheme	Examination Scheme							
Credits: 3 Lecture (L): 3 hrs./week	CIE	ISE	SCE	ESE	PR/OR	TW	Total	
Tutorial (T): 0 hr./week Practical (P): 0 hrs./week	20	30	20	30	-	-	100	

### **Course Objectives:**

- 1. To make the students aware of types of roles they would play in the society as professionals/ practitioners of the Civil Engineering profession.
- 2. To introduce some legal and practical aspects of Civil Engineering profession

Course Outcomes: Upon completion of the course, students will be able to:

- 1. Explain the terms related to civil engineering profession and various professional bodies including their roles and responsibilities
- 2. Summarize necessity and all aspects related to professional ethics
- 3. Identify all details of Civil Engineering contracts and tenders
- 4. Use Arbitration for disputes in Civil Engineering projects
- 5. Explain the legal provisions with reference to labor in construction works
- 6. Understand concepts of Copyright, Trademark, Intellectual Property Right, Patents

## **Unit I – Introduction to Professional Practice**

Concepts of Profession, Professionalism, and Professional Responsibility. Roles of various stakeholders: Government (Statutory/ regulatory bodies and organizations),

Standardization Bodies such as BIS, IRC (formulating standards of practice);

Professional bodies such as Institution of Engineers (India),

Local Bodies/ Planning Authorities (certifying professionals); Clients/ owners (role governed by contracts)

Developers (role governed by regulations such as RERA);

Consultants (role governed by bodies such as CEAI)

Contractors (role governed by contracts and regulatory Acts and Standards);

Manufacturers/ Vendors/ Service agencies (role governed by contracts and regulatory Acts and Standards)

## **Unit II– Introduction to Professional Ethics**

Definition/ meaning of Ethics and its necessity/ importance.

Types of ethics - Personal, Engineering, Professional, Business, and Corporate.

Code of Ethics as defined by Institution of Engineers (India). Conflict of Interests, Gift Vs Bribery,

Environmental breaches, Negligence, Deficiencies in state-of- the-art; Vigil Mechanism,

Whistle blowing protected disclosures.

Unit III – Legal Aspects Part-I

General Principles of Contracts & Management: Indian Contract Act 1972 and

amendments covering general principles of contracting,

Contract Formation & Law,

Privacy of contract. Various types of contract and their features.

T.Y. B. Tech. (Pattern 2020)

**Civil Engineering** 

Vishwakarma Institute of Information Technology, Pune-48

(An Autonomous Institute Affiliated to Savitribai Phule Pune University)

## **Department of Civil Engineering**

Valid & Voidable Contracts. Prime and sub-contracts.

Joint Ventures & Consortium. Tenders, its types & tender Notice, Bids & Proposals.

Bid Evaluation. Contract Conditions & Specifications.

Variations & Changes in Contracts, Differing site conditions, Cost escalation, Delays,

Suspensions & Termination. Liquidated damages & Penalties.

## Unit IV – Legal Aspects Part-II

Definition/ meaning of Arbitration & Arbitrator, necessity, scope, and types.

Conciliation and ADR (Alternative Dispute Resolution) system.

Extent of judicial intervention; International commercial arbitration.

Award including Form and content, Grounds for setting aside an award, Enforcement, Appeal and Revision. Enforcement of foreign awards – New York and Geneva Convention Awards.

Distinction between conciliation, negotiation, mediation, and arbitration.

### Unit V– Legal Aspects Part-III

Labour & other construction-related Acts/ Laws. Role of Labour in Civil Engineering.

Methods of engaging labour: on-roll (Muster), labour sub-contract, piece rate work.

Industrial Disputes Act, 1947. Industrial Employment (Standing Orders) Act, 1946;

Workmen's Compensation Act, 1923;

Building & Other Construction Workers (regulation of employment and conditions of service) Act (1996) and Rules (1998);

Real Estate Regulatory Authority( RERA) Act 2017,

National Building Code (NBC) 2017.

## Unit VI – Introduction to Copyright, IPR and related aspects.

Law relating to Intellectual Property: Introduction – meaning of Intellectual Property and IPR,

main forms of IP, Copyright, Trademarks, Patents and Designs, Secrets;

Meaning of copyright - computer programs, etc. Ownership of copyrights and assignment.

Piracy & Remedies. Meaning and process for Patents. Law relating to Patents under Patents Act, 1970.

## Textbooks:

- 1. B.S. Patil, "Legal Aspects of Building and Engineering Contracts", 1974.
- 2. National Building Code, Latest
- 3. RERA Act, 2017
- 4. Meena Rao (2006), "Fundamental concepts in Law of Contract", 3rd Edn. Professional Offset
- 5. Avtarsingh (2002), "Law of Contract", Eastern Book Co.
- 6. Dutt (1994), "Indian Contract Act", Eastern Law House
- 7. Kwatra G.K. (2005), "The Arbitration & Conciliation of Law in India with case law on UNCITRAL MODEL LAW on Arbitration", Indian Council of Arbitration
- 8. T. Ramappa (2010), "Intellectual Property Rights Law in India", Asia Law House
- 9. O.P. Malhotra, "Law of Industrial Disputes", N.M. Tripathi Publishers
- 10. Rustamji R.F., "Introduction to the Law of Industrial Disputes ", Asia Publishing House
- 11. ASCE Code of Ethics (2011) Principles Study and Application

#### Bansilal Ramnath Agarwal Charitable Trust's Vishwakarma Institute of Information Technology, Pune-48 (An Autonomous Institute Affiliated to Savitribai Phule Pune University)

## Department of Civil Engineering Design Project - II (CVUA32206)

Teaching Scheme	Examination Scheme							
Credits: 2 Lecture (L): 1 hrs./week	CIE	ISE	SCE	ESE	PR/OR	TW	Total	
Tutorial (T): NA Practical (P): 2 hrs./week	-	-	-	-	-	25	25	

## Prerequisite course(s): Pavement Design and its Construction

## Course Objective(s):

To provide broad awareness to the students for pavement design and its construction process

### **Course Outcomes:**

Upon completion of the course, students will be able to

- 1. Design the Flexible and Rigid Pavement
- 2. Explain the Pavement Construction and Discuss the Modern Trends

## Unit I – Pavement Design

Introduction; flexible pavements Computation of design traffic (Vehicle Damage Factor VDF, Lane distribution factor LDF, Traffic growth rate); stresses in flexible pavements; design guidelines for flexible pavements as per IRC 37-2018; rigid pavements- components and functions; factors affecting design; stresses in rigid pavements (ESWL); design guidelines for concrete pavements as per IRC 58-2015; joints in CC pavements, problems.

## **Unit II: Pavement Construction and Modern Trends**

**A. Pavement Construction:** Construction process of GSB, WBM, WMM; Cemented base, Introduction to bituminous works such as prime coat, tack coat, seal coat, Built-up Spray Grout (BSG), Asphaltic Concrete (AC) or Bituminous Concrete (BC), Bituminous Macadam (BM), Dense Bituminous Macadam (DBM) and premix carpet, Dry lean Concrete (DLC), Pavement Quality Concrete (PQC).

**B. Modern Trends in Highway Materials, Construction & Maintenance:** Mastic Asphalt, Cold Mix Asphalt Technology, Warm Mix Asphalt Technology, Recycled/Reclaimed Asphalt Pavement (RAP) (Manual Series - 2), Concept of Super pave Mix Design (Super pave Series 2), Non-Destructive Evaluation of Pavements (Falling Weight Deflectometer FWD).

## Term Work:

Students should work on a small project work wherein they need to

1. Project on Pavement based on IRC Code and suggest its Construction method with Cost.

2.Design of earth retaining structures (Gravity wall/Gabion wall/Reinforced earth wall) For Highway work 3.Prepare map using interface and tools in GIS software such as GRAM++ or QGIS or equivalent software (e.g., Road Network, Road Quality, Drainage Maps, traffic hotspots, etc.) for Highways.

# 4.Project Estimation of 10 km Road of Rigid and Flexible pavement

## **Textbooks:**

1. F. L. Mannering, Scott S (2011), "Washburn Principles of Highway Engineering and Traffic Analysis", Wiley India

S.K. Khanna and C.E.G. Justo (2011), "Highway Engineering" Nem Chand and Brothers, Roorkee
 L.R. Kadiyali (2019), "Principles and Practices of Highway Engineering" Khanna Publishing

Vishwakarma Institute of Information Technology, Pune-48

(An Autonomous Institute Affiliated to Savitribai Phule Pune University)

## **Department of Civil Engineering**

4. Rangwala (2015), "Highway Engineering", Charotar publishing House, Anand 388001 (Gujrat)
5. A. M. Chandra and S. K. Ghosh, "Remote sensing and Geographical Information System", Narosa Publishing House

6. B.M. DAS, "Principles of Geotechnical Engineering", Cengage Learning

### **Reference Books:**
