BansilalRamnathAgarwal Charitable Trust's

Vishwakarma Institute of Information Technology, Pune-48

(An Autonomous Institute affiliated to Savitribai Phule Pune University)

Curriculum for T.Y.B.Tech. (Pattern 2018)

Department of Information Technology

BansilalRamnathAgarwal Charitable Trust's

Vishwakarma Institute of Information Technology, Pune-48

(An Autonomous Institute affiliated to Savitribai Phule Pune University)

Department of Information Technology

Vision and Mission of the Department

• Vision

"To create professionally competent and globally acceptable IT engineers with social awareness".

- Mission
 - Educating budding engineers for, industry, academia, research and entrepreneurial pursuit through rigorous implementation of IT curriculum
 - > Inculcating IT skills to develop **innovative solutions** relevant to **global issues**

> Imparting values to practice social and professional ethics.

Program Specific Outcomes (PSOs)

At the end of program, students should be able to

- **PSO a:** An ability to understand, analyze and develop computer programs in the areas related to algorithms, web development and database management
- **PSO b:** An ability to apply knowledge of software engineering principles and practices for multidisciplinary applications to meet the needs of the industry and society

Program Outcomes (POs)

At the end of the program, students should be able to:

- 1. **Engineering knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals and an engineering specialization to the solution of complex engineering problems.
- 2. **Problem analysis**: Identify, formulate, review research literature and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences and engineering sciences.
- 3. **Design/development of solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safetyand the cultural, social and environmental considerations.
- 4. **Conduct investigations of complex problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- 5. **Modern tool usage**: Create, select and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
- 6. **The engineer and society**: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- 7. Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts and demonstrate the knowledge of, and need for sustainable development.
- 8. **Ethics**: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- 9. **Individual and team work**: Function effectively as an individual and as a member or leader in diverse teams and in multidisciplinary settings.

- 10. **Communication**: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations and give and receive clear instructions.
- 11. **Project management and finance**: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- 12. **Life-long learning**: Recognize the need for and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

ER Diagram, Design Issues, Extended E-R Features, converting E-R & EER diagram into tables.

Unit II -Relational Algebra, SQL and PL/SQL

Introduction to Relational Algebra and Calculus, SQL: Characteristics and advantages, SQL Data Types and Literals, DDL, DML, DCL, TCL, SQL Operators, Tables: Creating, Modifying, Deleting, Views: Creating, Dropping, Updating using Views, Indexes, SQL DML Queries: SELECT Query and clauses, Set Operations, Predicates and Joins, Set membership, Tuple Variables, Set comparison, Ordering of Tuples, Aggregate Functions, Nested Queries, Database Modification using SQL Insert, Update and Delete Queries. PL/SQL:

Concept of Stored Procedures and Functions, Cursors, Triggers, Roles and Privileges, Embedded SQL, Dynamic SQL.

Unit III – Relational Database Design

Relational Model: Basic concepts, Attributes and Domains, CODD's Rules, Functional Dependencies: Basic concepts, closure of set of functional dependencies, closure of attribute set, canonical cover, Decomposition: lossless join decomposition and dependency preservation, The Process of normalization, 1NF, 2NF, 3NF, BCNF, 4NF, 5NF.

Unit IV - Database Transactions and Query Processing

Basic concept of a Transaction, Transaction Management, Properties of Transactions, Concept of Schedule, Serial Schedule, Serializability: Conflict and View, Testing conflict and view serializability, Recoverable and Non-recoverable Schedules, Concurrency Control: Need, Locking Methods, Deadlocks, Time stamping Methods, Different Crash Recovery methods such as Shadow-Paging and Log-Based Recovery: Deferred and Immediate, Checkpoints, Introduction to Query Processing and Query Optimization, Performance Tuning in SQL

Unit V – Database architecture

Introduction to Database Architectures: Multi-user DBMS Architectures, Parallel Databases: Speedup and Scale up, Architectures of Parallel Databases. Distributed Databases: Architecture of Distributed Databases, Distributed Database Design, Distributed Data Storage, Distributed Transaction: Basics, Failure modes, Commit Protocols, Concurrency Control in Distributed Database.

Unit VI - Advances in Databases and Big Data

Introduction to Database Architectures: Multi-user DBMS Architectures, Parallel Databases: Speedup and Scale up, Architectures of Parallel Databases. Distributed Databases: Architecture of Distributed Databases, Distributed Database Design, Distributed Data Storage, Distributed Transaction: Basics, Failure modes, Commit Protocols, Concurrency Control in Distributed Database.

	Assignments : Database Management System Laboratory
	Part-I: SQL and PL/SQL
	Design any database with at least 3 entities and relationships between them. Apply DCL and
1	DDL
	commands. Draw suitable ER/EER diagram for the system.
	Design and implement a database and apply at least 10 different DML queries for the
	following task.
	For a given input string display only those records which match the given pattern or a phrase
2	in the
	search string. Make use of wild characters and LIKE operator for the same. Make use of
	Boolean and
	arithmetic operators wherever necessary.
	Execute the aggregate functions like count, sum, avg etc. on the suitable database. Make use
	of built
2	in functions according to the need of the database chosen. Retrieve the data from the database
3	based on time and date functions like now (), date (), day (), time () etc. Use group by and
	having
	clauses.
4	Implement nested sub queries. Perform a test for set membership (in, not in), set comparison
	(<some,>=some, <all (unique,="" and="" cardinality="" etc.)="" not="" set="" th="" unique).<=""></all></some,>
5	Write and execute suitable database triggers .Consider row level and statement level triggers. Write and execute PL/SQL stored procedure and function to perform a suitable task on the
6	
6	database.
7	Demonstrate its use. Write a PL/SQL block to implement all types of cursor.
,	Execute DDL statements which demonstrate the use of views. Try to update the base table
	using its
	corresponding view. Also consider restrictions on updatable views and perform view creation
8	from
	multiple tables.
	*

Part-II: Mini Project / Database Application Development

Student group of size 3 to 4 students should decide the statement and scope of the project which will be refined and validated by the faculty considering number of students in the group. Draw and normalize the design up to at ER Diagram least 3NF in case of back end as RDBMS. Suggested Directions for development of the mini project.

- Build a suitable GUI by using forms and placing the controls on it for any application. (E.g Student registration for admission, railway reservation, online ticket booking etc.). Proper data entry validations are expected.
- Develop two tier architecture and use ODBC/JDBC connections to store and retrieve data from the database. Make a user friendly interface for system interaction. You may consider any applications like employee management system, library management system etc.

Implement the basic CRUD operations and execute a transaction that ensures ACID properties.

Make use of commands like commit, save point, and rollback. You may use examples like transfer

of money from one account to another, cancellation of e-tickets etc.

Operating System (ITUA31182)

Teaching Scheme		Ex	aminatio	on Schem	ne		
Credits: 4	CIE	ISE	SCE	ESE	PR/OR	TW	Total
Lecture (L): 3 hrs./week		191	SCE	LOL	INOK	1 **	Total
Tutorial (T): 2hr.							
Practical (P): 2hrs./week	20	20	20	20	25		105
	20	30	20	30	25	-	125
Prerequisites: Computer Organizatio	n and Arc	chitecture	, Fundam	entals of	Data Stru	uctures.	
Course Objectives :							
• To introduce basic concepts and t	functions of	of modern	operating	systems.			
 To understand the concept of pro 				555555			
• To understand the scheduling of j				stand the	concept of	concurre	ncy
control.							
• To understand the concept of I/O							
To understand various Memory Memor	-	nt techniq	ues.				
• To study and understand compile Course Outcomes :	i design						
 Understand of the role of Oper Understand & implement the c Demonstrate the concept of protection the deadlock. Realize the concept of I/O mand the various memory Understand the various memory Understand Linux Operating States 	concept of pocess/three nagement ry manage ystem.	f a proces eads, proc and File	s and three cess synch system.	ead.	on, mutua	l exclusio	on and
Unit I-Overview of Operating System	m						
Operating System Objectives and Fun Leading to Modern Operating System commands, shell as a scripting langua	s, Virtual		1	U	•	1	
Unit II- Process Description and Co	ntrol						
Process: Concept of a Process, Process Waiting for the process/processes, Loa Execution of the Operating System. T Types of Threads, Thread programmin Scheduling Algorithms, and Thread S	ading pro hreads: P ng Using	grams int rocesses Pthreads.	to process and Threa	ses and Pa ads, Conc	rocess Te cept of M	rmination ultithread	n),
Unit III- Concurrency Control		–		. ~			
Process/thread Synchronization and M			-		•	-	
Mutual Exclusion, Mutual Exclusion:	Hardware	e Support	, Operati	ng Syster	n Suppor	t (Semap	nores and

Mutex), Programming Language Support (Monitors). Classical synchronization problems: Readers/Writers Problem, Producer and Consumer problem, Interprocess communication (Pipes, shared memory: system V). Deadlock: Principles of Deadlock, Deadlock Modeling, Strategies to deal with deadlock: The Ostrich Algorithm, Deadlock Prevention, Deadlock Avoidance, Deadlock detection and recovery, An Integrated Deadlock Strategy, Example: Dining Philosophers Problem.

Unit IV- Memory Management

Memory Management: Memory Management Requirements, Memory Partitioning: Fixed Partitioning, Dynamic Partitioning, Buddy System, Relocation, Paging, Segmentation. Virtual Memory: Hardware and Control Structures, Operating System Software.

Unit V-Input / Output And File Management

I/O Management and Disk Scheduling: I/O Devices, Organization of the I/O Function, Operating System Design Issues, I/O Buffering, Disk Scheduling(FIFO, SSTF, SCAN, C-SCAN, LOOK, C-LOOK), Disk Cache. File Management: Overview, File Organization and Access, File Directories, File Sharing, Record Blocking, Secondary Storage Management.

Unit VI – Study of Linux Operating System

Linux Design Principles, Linux Booting Process, Kernel Modules, Process Management, Scheduling, Memory Management, File Systems, Input and Output, Inter-process Communication.

	3.	Thomas W. Doeppner, Operating System in depth: Design and Programming,
		WILEY, ISBN: 978-0- 471-68723-8

	Assignments : Operating System Laboratory
1	Shell programming Write a program to implement an address book with options given below: a) Create address book. b) View address book. c) Insert a record. d) Delete a record. e) Modify
	a record. f) Exit.
2	Process control system calls: The demonstration of <i>FORK</i> , EXECVE and <i>WAIT</i> system calls along with zombie and orphan states. Implement the C program in which main program accepts an integer array. Main program uses the <i>FORK</i> system call to create a new process called a child process. Parent process sorts an integer array and passes the sorted array to child process through the command line arguments of <i>EXECVE</i> system call. The child process uses <i>EXECVE</i> system call to load new program that uses this sorted array for performing the binary search to search the particular item in the array.
	Thread management using pthread library. Implement matrix multiplication using
	multithreading. Application should have pthread_create, pthread_join, pthread_exit. In the
3	program, every thread must return the value and must be collected in pthread_join in the main
	function. Final sum of row column multiplication must be done by main thread (main
	function).
4	Thread synchronization using counting semaphores and mutual exclusion using mutex. Application to demonstrate: producer-consumer problem with counting semaphores and mutex.
5	Reader Writer Problem solution with Mutex, Semaphore.
6	Deadlock Avoidance Using Semaphores: Implement the deadlock-free solution to Dining Philosophers problem to illustrate the problem of deadlock and/or starvation that can occur when many synchronized threads are competing for limited resources.
	Inter process communication in Linux using following. a. Pipes: Full duplex communication between parent and child processes. Parent process
7	writes a pathname of a file (the contents of the file are desired) on one pipe to be read by child
	process and child process writes the contents of the file on second pipe to be read by parent
	process and displays on standard output.
	Inter-process Communication using Shared Memory using System V. Application to
	demonstrate: Client and Server Programs in which server process creates a shared memory
8	segment and writes the message to the shared memory segment. Client process reads the
	message from the shared memory segment and displays it to the screen.
	*All assignments to be implemented using C++ on Linux platform.
1	

Theory of Computation (ITUA31183)

Grammar- Definition, representation of grammar, Chomsky hierarchy, Context Free Grammar- Definition, Derivation, sentential form, parse tree, inference, derivation, parse tree, ambiguity in grammar and language, Simplifications of context free Grammar-Eliminating unit productions,	
Lecture (L): 3 hrs/week 20 30 20 30 - Prerequisites :Basic Mathematics, Discrete Structure Course Objectives : • Understand fundamentals of computer mathematics. • Study the various abstract computing models. • Study the Regular expression. • Study the different types of languages& their relationships. • Study the different types of grammar & ambiguity in the grammar • Study the recursive & recursively enumerable languages. Course Outcomes : Course Outcomes : After completion of the course, student will be able to : . 1. Use the mathematical preliminaries with the help of proofs and lemmas for language derivation. 2. Understand Regular expression, its conversion to automata and its applications. 3. Understand the concept of language acceptability by Turing machine and types of Turing machine 6. Understand the recursive & recursively enumerable languages. Unit I - Theory of Automata: Basic Mathematical Objects: Sets, Logic, functions, Relations, Strings. Definition of Finite Automata (FA), Description of FA, Transition Systems, Acceptability of a S by a FA, Non deterministic FA, Equivalence of DFA and NFA, FA with output: Moore and Met machines-Definitions, Models,	Total

Understand the concept of language acceptability by Turing machine and types of Turing machine Understand the recursive & recursively enumerable languages. Unit I - Theory of Automata: Basic Mathematical Objects: Sets, Logic, functions, Relations, Strings. Definition of Finite Automata (FA), Description of FA, Transition Systems, Acceptability of a S by a FA, Non deterministic FA, Equivalence of DFA and NFA, FA with output: Moore and Meamachines-Definitions, Models, inter-conversion, minimization of FA. Unit I - Regular Expressions (RE) and Languages Recursive definition of regular expression, regular set, identities of regular expressions, Convers NFA With epsilon moves to DFA, Conversion-RE to DFA, Conversion-DFA to RE, Equivalence of R.E. Unit II - Grammar Grammar - Definition, representation of grammar, Chomsky hierarchy, Context Free Grammar-Definition, sentential form, parse tree, inference, derivation, parse tree, ambiguity in grammar and language, Simplifications of context free Grammar-Eliminating unit productions,	
 Study the various abstract computing models. Study the Regular expression. Study the different types of languages& their relationships. Study the different types of grammar & ambiguity in the grammar Study the recursive & recursively enumerable languages. Course Outcomes : After completion of the course, student will be able to : Understand Regular expression, its conversion to automata and its applications. Understand Regular expression, its conversion to automata and its applications. Understand different types of languages, grammars and removal of ambiguity in the grammar. Construct pushdown automata for formal language and its applications. Understand the concept of language acceptability by Turing machine and types of Turing machine Understand the recursive & recursively enumerable languages. Unit I - Theory of Automata: Basic Mathematical Objects: Sets, Logic, functions, Relations, Strings. Definition of Finite Automata (FA), Description of FA, Transition Systems, Acceptability of a S by a FA, Non deterministic FA, Equivalence of DFA and NFA, FA with output: Moore and Meamachines-Definitions, Models, inter-conversion, minimization of FA. Unit II - Regular Expressions (RE) and Languages Recursive definition of regular expression, regular set, identities of regular expressions, Convers NFA With epsilon moves to DFA, Conversion-DFA to RE, Equivalence of R. E, Equivalence of FA, Pumping lemma for regular languages, Closure properties of regular languages, Applications of R.E Unit II - Grammar Grammar- Definition, sentential form, parse tree, inference, derivation, parse tree, ambiguity in grammar and language, Simplifications of context free Grammar-Eliminating unit productions,	
 Study the Regular expression. Study the different types of languages& their relationships. Recursive definition of regular expression, regular set, identities of regular expressions, Converse NFA With epsilon moves to DFA, Conversion-RE to DFA, Conversion-DFA to RE, Equivalence R.E, Equivalence of FA, Pumping lemma for regular languages, Closure properties of regular languages, Applications of R.E Unit III – Grammar Grammar- Definition, representation of grammar, Chomsky hierarchy, Context Free Grammar- Definition, Derivation, sentential form, parse tree, inference, derivation, parse tree, ambiguity in grammar and language, Simplifications of context free Grammar-Eliminating unit productions,	-
NFA With epsilon moves to DFA, Conversion-RE to DFA , Conversion-DFA to RE, Equivalence R.E, Equivalence of FA, Pumping lemma for regular languages, Closure properties of regular languages, Applications of R.E Unit III – Grammar Grammar- Definition, representation of grammar, Chomsky hierarchy, Context Free Grammar- Definition, Derivation, sentential form, parse tree, inference, derivation, parse tree, ambiguity in grammar and language, Simplifications of context free Grammar-Eliminating unit productions,	-
Unit III – Grammar Grammar- Definition, representation of grammar, Chomsky hierarchy, Context Free Grammar- Definition, Derivation, sentential form, parse tree, inference, derivation, parse tree, ambiguity in grammar and language, Simplifications of context free Grammar-Eliminating unit productions,	Aealy
Definition, Derivation, sentential form, parse tree, inference, derivation, parse tree, ambiguity in grammar and language, Simplifications of context free Grammar-Eliminating unit productions,	Aealy version of ence of
symbols, and Null-productions, Normal Forms for CFG- Chomsky normal form, Greibach norm	Aealy version of ence of

Regular Grammar- Definition, left linear, right linear grammar, Inter conversion between left linear and right linear regular grammar

Unit IV - Push Down Automata

Push Down Automata- Definition, Notation, acceptance by final state, acceptance by empty stack, Equivalence of PDA and CFG- Grammar to PDA, PDA to Grammar, Deterministic PDA and Non Deterministic PDA. Closure Properties of CFLs.

Unit V – Turing machines

Turing machine Model, Representation of Turing machine, Language acceptability by Turing machine, Design of Turing machine, Types of TM, Halting Problem

Unit VI - Recursively Enumerable Languages

Recursively Enumerable and Recursive, Properties of recursive and recursively enumerable languages, Post correspondence problem,

Undecidability: Reducing one problem to another, Other unsolvable Problems. Tractable and In Tractable Problems

Text books :	 Mishra K., Chandrasekaran N., 'Theory of Computer Science (Automata, Languages and Computation)", Second Edition, Prentice Hall of India John C Martin. "Introduction to Language and Theory of Computation", Third edition, Tata McGraw- Hill.

Laws & Ethics for Engineer (ES31184IT)

Teaching Scheme Examination Scheme									
Credits: 3	CIE	ISE	SCE	ESE	PR/OR	TW	Total		
Lecture (L): 3 hrs./week		1312	SCE	LOL		TAA	1018		
Practicals/week: 2 hrs./week									
	20	20	20	20			100		
	20	30	20	30	-	-	100		
Prerequisites :NA									
Course Objectives :									
• Awareness about fundamental rig	hts and hu	ıman righ	s.						
• Profound Knowledge about intell		-							
• Educate about right to informatio	-								
• Realization of labour and Corpor	ate law								
• Ethical issues for engineers.									
Course Outcomes :									
After completion of the course, studen	t will be	able to .							
After completion of the course, studen	t will be a	able to .							
1. Understand fundamental and hum	nan rights								
2. Comprehend intellectual Property	-								
3. Realize importance of right to inf		and gende	r inequalit	y.					
4. Understand labour and corporate		C	•	•					
5. Understand fundamental concept	in engine	ering ethic	s.						
6. Understand the responsibilities of	Engineer	s to enviro	onment.						
Unit I – Fundamental Rights& Hum	an Right	ts:							
Constitutional Law - the Preamble; Fu	ndamenta	al Rights	- Life and	l Persona	al Liberty	with refe	rence to		
Judicial Activism; Directive principles	of State	policy; R	elationsh	ip betwe	en Fundan	nental rig	ghts and		
Directive Principle; Enforcement of rig									
International Human Rights Instrumen									
Human Rights Enforcement mechanism		a – Huma	n Rights	Act inclu	uding Nati	onal and	State		
Human Rights Commission and their r	ole								
Unit II -Intellectual Property Law									
Intellectual Property Law - Meaning and					•••	-	• •		
Trademarks, Patents, Undisclosed Info					0	•	uts and		
Integrated circuits, Other new forms su	-		-						
International instruments on IP -Conve		ern, Rom	e, Paris a	ind TRIP	S, Interna	tional			
organizations relating IPRs, WIPO, W		1	1. 1		1, 1, 1	1.	,		
Laws in India- Copy Rights Act, 1957	-	-			-	iding coi	nputer		
Programmes (difference between India Trademarks A et 1000 Trademarks P		, .	0				a m d		
Trademark Act, 1999 – Trademarks Ro	-	-							
property mark, Doctrine of deceptive s	imilarity.	. Passing	OTT an int	ringeme	nf and rem	ieaies. Pa	atents Ac		

1970 – Patentable and Non-Patentable subject matters- difference between invention and discovery, infringement and remedies.

Unit III – Right to Information and Gender Inequality:

Right to Information Act, 2005 - Evolution and concept; Procedures; RTI and relevant provisions of -Official Secret Act, 1923, Indian Evidence Act, 1872, Information Technology Act 2000– data protection and right to privacy

Gender Studies - Meaning of Gender-international and national perspective, international legal frameworks and institutions; National perspective - Laws relating to women in India; National and State Women Commission, Judicial approach and responses(landmark cases)

Unit IV - Labour Laws & Corporate Law

Labour Laws- Industrial Disputes Act, 1947- definition of Industry, dispute settlement mechanism, Collective bargaining; Industrial Employment (Standing Orders) Act, 1946; Workmen's Compensation Act, 1923.

Corporate Law - Meaning of company – company as a person; Types of Companies, The Company Act, 2013, Corporate liability - civil and criminal.

Unit V – Introduction

Introduction to ethical reasoning and professional ethics, Professional practices in ethics, Central professional responsibility, workplace right and responsibility, Ethics as design doing justice to moral problem.

Unit VI – Ethics for Engineer's

Responsibility to environment, Engineer as social experimentation, Research ethics, Engineer as manager, leader and consultant.

Professional Elective-I (ITUA31185) Artificial Intelligence (ITUA31185A)

Teaching Scheme		Examination Scheme								
Credits: 4 Lecture (L): 3 hrs./week	CIE	ISE	SCE	ESE	PR/OR	TW	Total			
Practicals/week: 2 hrs./week	20	30	20	30	-	25	125			

Prerequisites : Discrete Mathematics, Data Structures, basic probability theory and statistics, Knowledge of any programming language

Course Objectives :

- To understand the various characteristics of Intelligent agents and AI domain.
- To learn the different search strategies in AI.
- To learn how to represent knowledge in solving AI problems.
- To introduce the concepts of Expert Systems and Machine Learning.
- To know about the various applications of AI.

Course Outcomes :

After completion of the course, students will be able to:

- 1. Understand different types of AI Agents and environment.
- 2. Apply various AI search algorithms to typical AI problems.
- 3. Understand fundamentals of knowledge representation and planning.
- 4. Explain working knowledge of reasoning in presence of incomplete and or uncertain information.
- 5. Design the Expert Systems, Game development, NLP.
- 6. Explore the Applied AI in various fields.

Unit I – Introduction To AI And Intelligent Agents

Introduction-Human Intelligence, comparison between Man and Machine,

Definition -The Turing Test – Characteristics of Intelligent Agents–Typical Intelligent Agents – Environment, Environment Types, Problem Solving Approach to Typical AI problems, Domains of AI, Brief of Application of AI. Introduction to Basic concept of Machine Learning (ML), Deep Learning (DL)and Data Science.(DS). AI vs ML vs DL vs DS, Case Study- 1 : AI for everyone/ Building AI Projects

Case Study- 2 : AI and Society / Ethics for AI

Unit II - Heuristics Search And Game Playing

Defining the problem as a state space search, problem characteristics,

Problem solving Methods - Search Strategies- Uninformed - Informed - Heuristics - Local Search Algorithms and Optimization Problems - Searching with Partial Observations - Constraint Satisfaction Problems - Constraint Propagation - Backtracking Search.

(Uninformed Search Strategies: Breadth-first search, Uniform-cost search, Depth-first search, depth-first search, Informed (Heuristic) Search Strategies: Greedy best first search, A* search, Minimizing the total estimated solution cost, Heuristic search techniques- Generate and test, Hill Climbing, Best-First Search, Constraint satisfaction problems (CSP),

Game Playing - Alpha Beta Pruning, Minimax search procedure.

Case Study - 3 : State of Art Game Programs and Analysis

Unit III – Knowledge Representation

Knowledge representation, Approach & Issues in knowledge representation, Structured representation of knowledge, Propositional logic, Predicate logic, Introduction to predicate calculus, Resolution, Use of predicate calculus, First order logic, unification and lifting.

Weak-slot and filler structure, Strong slot and filler structures.

Unit IV - Knowledge Inference And Planning

Production based system, Frame based system. Inference - Backward chaining, Forward chaining, Rule value approach, Fuzzy reasoning - Certainty factors, Bayesian Theory-Bayesian Network-Dempster – Shafer theory. Planning – Block world problem, components of a planning systems, Goal stack planning, Non-linear planning, Hierarchical planning, least commitment strategy

Unit V -Learning And Expert System

Definition of learning, Forms of learning, Rote learning, learning by taking advice, Learning in problem solving, Induction leaning, Explanation based learning, Formal learning theory. Connectionist models-learning in Neural network

Expert systems - Intelligent System Vs Expert system, Architecture of expert systems, Roles of expert systems - Knowledge Acquisition –Meta Expert systems shells, Typical expert systems - MYCIN, DART, XOON, RI,.

Unit VI- AI Applications And Advanced AI

Natural Language Processing- Introduction, Steps in the process, Spell checking, Language Models - Information Retrieval- Information Extraction - Machine Translation - Speech Recognition,

Image formation, Image processing operations, Extracting 3D information, Object Recognition, Using visionfor manipulation and navigation.

Robot – Hardware – Perception – Planning – Moving Case Study 4 : Applications of AI

Text books :	 Artificial Intelligence: A Modern Approach by Peter and Norvig ISBN-0-13103805- 2, Reference Books: Artificial Intelligence by Elaine Rich, Kevin Knight and Nair ISBN-978-0- 07008770-5, TMH Artificial Intelligence by Patrick Henry Winston, Addison-Wesley Publishing Company,ISBN 0-201-53377-4
Reference Books :	 Prolog Programming for A.I. by Bratko, TMH 3. Artificial Intelligence by Saroj Kausik ISBN:- 978-81-315-1099-5, Cengage Learning Artificial Intelligence and Intelligent Systems by Padhy, Oxforfd University Press Deepak Khemani, "A First Course in Artificial Intelligence", McGraw Hill Education(India), 2013, ISBN : 978-1-25-902998-1 Deepak Khemani —Artificial Intelligence, Tata Mc Graw Hill Education 2013

	Assignments : Professional Elective –I (AI) Laboratory
1	Assignment on Heuristic Search Techniques: Implement Best first search (Best-Solution but not always optimal)
2	Implementation of A* algorithm (Always gives optimal solution) for solving Puzzle problems.
3	Implementation of MinMax Search Procedure with alpha beta pruning for finding the solutions of games.
4	Assignment on Constraint Satisfaction Problem: Implement graph coloring problem. OR Implementation of Constraint Satisfaction Problem for solving Crypt-arithmetic Problems.
5	Implementation of Unification algorithm by considering Resolution concept.
6	 Mini-project on any one of the following concept (PBL): 1. Expert system 2. Game development 3. NLP 4. Solving problem with AI

Internet of Things (ITUA31185B)

Teaching Scheme	Examination Scheme								
Credits: 3 Lecture (L): 3 hrs./week	CIE	ISE	SCE	ESE	PR/OR	TW	Total		
Practicals/week: 2 hrs./week									
	20	30	20	30	_	25	125		
	20	50	20	50		23	125		
Prerequisites : Data Communication (CN	fundame	ntals in DO	C)	1					
Course Objectives :									
 To understand fundamentals of Io' To implementing small IoT system To gain knowledge of IoT protoco To comprehend fundamentals of s To learn how secure infrastructure To learn real world application sc studies 	ns using b ls ecurity in for IoT is	IoT impleme	nted		nd econom	nic impact	t using case		
Course Outcomes :									
After studying this course, students will be	able to:								
1. Demonstrate the fundamentals of 1	loT.								
2. Understand Things in IoT.	•.1 .1		1.1.75						
 Identify the way of communication Write pseudocode for IoT. 	n with the	help smal	1 Io1 mod	lules.					
5. Analyze the security issues in IoT.									
6. Model the real-world applications	of IoT.								
Unit I – Introduction to IoT									
IoT: Definition and characteristics of IoT, Technical Building Blocks, Physical desi functional blocks, IoT communication mo and deployment templates, IoT Issues and	gn of IoT dels, IoT	, Things Communi	of IoT, Io cation AP	T Protoco	ols, Logica	l design	of IoT, IoT		

Unit II - IOT Things Layer

Basic electronics (Current, circuit, registers, connectors), Sensors, Actuators, and Smart Objects, Classification of thins.

Open Source computing hardware's: Arduino, Raspberry Pi. Electronic Communication Protocols (Device Interfacing) Protocols: I2C, SPI, UART, USRT, CAN.

Unit III - Network Communication Layer

M2M Protocols, IoT Protocols Stack, IoT Protocols overview: CoAP, MQTT, IPv6, ZigBee, Bluetooth, Wifi. IoT Gateway

Sensor Networks, Connecting Smart Objects: Communications Criteria, IoT Access Technologies: IEEE 802.15.4

Unit IV – IoT and M2M and Embedded Programming

Difference between IoT and M2M, IoT Physical Devices and Endpoints: Basic building blocks and IoT device, Interoperability in IoT, IoT Middleware.

Introduction to Arduino Programming, Integration of Sensors and Actuators with Arduino Introduction to Raspberry Pi, Raspberry Pi interfaces, Programming Raspberry Pi with Python.

Unit V–Data Layer and Security in IoT

IoT Security: Vulnerabilities of IoT, Security Requirements, Challenges for Secure IoT, Threat Modelling, Key elements of IoT Security: Identity establishment, Access control, Data and message security, Non repudiation and availability, Security model for IoT.

Data Layer: Data Processing/Data Analytics/BIG Data.

Introduction to Cloud Computing, Cloud of Things

Unit VI - IoT Case Studies

Case Studies: Home Intrusion Detection, Weather Monitoring, System, Air Pollution Monitoring, Smart Irrigation, Smart cities, Health Care.

RFID technology.

IOT design affair: Introduction to soldering techniques and its types, Mounting of electronic components on PCB. Introduction and applications of Raspberry pi and Arduino architecture.

Text books:	 Internet of Things: A Hands-On Approach ArshdeepBahga, Vijay Madisetti VPT – Paperback 2015 978- 0996025515 628/- 2. 	Assignments : Professional Elective –I (IoT) Laboratory
1	Study of basic Electronic components, Raspberry-Pi, Arduino, Beagle board.
2	Study of different operating systems for Raspberry-Pi/Beagle board/Arduino. Understanding the process of OS installation on Raspberry-Pi.
3	Prepare a circuit and write a simple program digital read/write using LED and Switch
4	Prepare a circuit and write a program to simulate a traffic signal.
5	Prepare a circuit and write a simple program Digital/Analog read/write using sensor and actuators.(It can cover 3-4 assignments with variety of sensors.)
6	Prepare a circuit and write a program to sense the value using analog/digital sensors and display it on LCD/record it locally in database.
7	Introduction to MQTT and sending sensor data to cloud using Raspberry-Pi/Beagle board/Arduino.
8	Develop a mini project.

Computer Graphics (ITUA31185C)

Teaching Scheme	Examination Scheme

Overview of graphics systems – Video d monitors and Workstations, Input devices, lines, line drawing algorithms-Digital Diff dotted and dashed. Circle drawing algorith method	lisplay de Hard cop erential A m: DDA,	vices, Ras y Devices nalyzer (I Bresenhar	ter scan s , Graphics DDA), Bres	ystems, F Software senham li	Random sca ; Output pane algorithme	an system rimitives - ms, Line s	s, Graphic – points ar tyles: thic	
Unit II - Graphics Programming using								
Why OpenGL, Features in OpenGL, Ope viewing pipeline, viewing matrix specifica							GLUT, 3	
Unit III – Polygons and Clipping Algori	ithms							
Introduction to polygon, types: convex, c	oncave an an line fil							

Unit IV -2D and 3D Transformations

Two dimensional viewing – viewing pipeline, viewing coordinate reference frame; widow-to-viewport coordinate transformation, Transformations and Matrices, Transformation Conventions, 2D Transformations, Homogeneous Coordinates and Matrix Representation of 2D Transformations, Translations and Homogeneous Coordinates, Rotation, Reflection, Scaling, Shear transformation Combined Transformation, Transformation of Points, Transformation of The Unit Square, Solid Body Transformations, Rotation About an Arbitrary Point 3-D transformations: introduction, 3-D geometry, primitives, Stages in 3D viewing ,3-D transformations and matrix representation, rotation about an arbitrary axis, 3-D viewing transformations

Parallel (Oblique: Cavalier, Cabinet and orthographic: isometric, diametric, trimetric) and Perspective (Vanishing Points – 1 point, 2 point and 3 point)

Unit V – Segment and Animation

Segment: Introduction, Segment table, Segment creation, closing, deleting and renaming, Visibility. Animation: Introduction, Design of animation sequences, Animation languages, Keyframe, Morphing,

Unit VI- Illumination and Shading

Light sources – basic illumination models – halftone patterns and dithering techniques; Properties of light – Standard primaries and chromaticity diagram; Intuitive colour concepts – RGB colour model – YIQ colour model – CMY colour model – HSV colour model – HLS colour model; Colour selection.

Shading Models-C	Constant, Phong's model, Gouraud shading
Text books :	 S. Harrington, —Computer Graphics, 2nd Edition, McGraw-Hill Publications, 1987, ISBN 0 - 07 - 100472 - 6.
	 D. Rogers, —Procedural Elements for Computer Graphics, 2nd Edition, Tata McGraw-Hill Publication, 2001, ISBN 0 – 07 – 047371 – 4. Donald D. Hearn, —Computer Graphics with Open GL, 4th Edition, ISBN13: 9780136053583.
Reference Books :	 J. Foley, V. Dam, S. Feiner, J. Hughes, —Computer Graphics Principles and Practicel, 2nd Edition, Pearson Education, 2003, ISBN 81 – 7808 – 038 – 9. D. Rogers, J. Adams, —Mathematical Elements for Computer Graphicsl, 2nd Edition, Tata McGrawHill Publication, 2002, ISBN 0 – 07 – 048677 – 8

	Assignments : Professional Elective –I (CG) Laboratory
1	Implement basic OPENGL primitives.
2	 Implement DDA algorithm for line drawing. a. Implement DDA using Mouse. b. Draw any shape or pattern. c. Draw Dotted, Dashed and Das-Dot-Dash line.
3	Implement Bresenham's algorithm for line drawing.a. Draw given pattern.b. Draw Dotted, Dashed and Das-Dot-Dash line
4	Implement Midpoint and Bresenham's Circle drawing algorithm.
5	Draw the polygons by using the mouse. (Use DDA algorithm for line drawing).Fill the polygon with Boundary fill and Flood fill method.
6	Implement 2D translation, sheer, rotation, reflection and scaling transformations on equilateral triangle or rhombus.
7	Implement Sutherland Hodgman algorithm to clip any given polygon. Provide the vertices of the polygon to be clipped and pattern of clipping interactively.
8	Implement 3D Cube translation, scaling and rotation. Translations in x, y, z directions Rotation by angle 450 about z axis, rotation by 600 about y-axis in succession. Scaling in x-direction by a factor of 2, scaling in y- direction by a factor of 3.
9	Project based Learning -Animation: Implement any animation.

OBJECT ORIENTED SYSTEM DESIGN (ITUA31186)

Teaching Scheme	Examination Scheme							
Credits: 3	CIE	ISE	SCE	ESE	PR/OR	TW	Total	
Lecture (L): 3 hrs./week			~ ~ ~ ~					
	-	-	50	-	-	25	75	
Prerequisites : Software Engineering, Ob	ject Orien	ted Progra	amming, p	oroficiency	y in Java			
Course Objectives :								
• To understand the object oriented	concepts	for design	ing object	oriented	models			
 To understand the object offended To understand the use of UML (U 	-	Ũ	0 0			alysis and	design.	
• To describe the step by step of				of softwa	re develop	ment fro	m problen	
statement through analysis, system	•		•					
• To understand the issues for imple Course Outcomes :	ementing	object orie	ented desig	gns or mo	dels.			
 Demonstrate the ability to apply the solving system modeling and desi Design and implement object oriei Design object oriented structural in 4. Apply the concept of domain and Unit I – Software Development Views a 	gn problem nted model model by a application nd UML	ms using U els using U developing n analysis	UML. Activity Diagram: Activity and Actions, Initial and Final Activity, Activity Edge, Decision and Merge Points, Fork and Join, Input and Output Pins, Activity Group, Activity Partitions, Constraints on Action, Swim Lanes.

Department of Information Technology

Sequence Diagram: Context, Objects and Roles, Links, Object Life Line, Message or stimulus, Activation/Focus of Control, Modeling Interactions.

State Diagram: State Machine, Triggers and Ports, Transitions, Initial and Final State, Composite States, Submachine States.

Introduction to Communication, Component, Deployment diagram

Text books :	1. Michael. Blaha, James. Rumbaugh "Object-Oriented Modeling and Designwith UML", 2nd Edition, Pearson Education, 2005.
Reference Books :	 Ali. Bahrami, "Object Oriented Systems Development", McGraw-Hill, 2008. Grady. Booch "Object-Oriented Analysis and Design with Applications", 3rd Edition, Pearson, 2007. Mark. Priestley, "Practical Object-Oriented Design with UML", 2nd Edition, Tata McGraw-Hill, 2003.

	Assignments : Object Oriented System Design Laboratory
1	Write Problem Statement for System / Project. Identify Project of enough complexity, which has at least 4-5 major functionalities. Identify stakeholders, actors and write detail problem statement for your system.
2	Prepare Use Case Model Identify Major Use Cases, Identify actors. Write Use Case specification for all major Use Cases. Draw detail Use Case Diagram using UML2.0 notations
3	Prepare Activity Model
5	Draw Activity diagram with Swim lanes using UML2.0 Notations for major Use Cases
4	Prepare Analysis Model-Class Model and implement it. Identify Analysis Classes and assign responsibilities. Draw Analysis class Model using UML2.0 Notations.
	Implement Analysis class Model-class diagram with a suitable object oriented language
5	Prepare a Design Model from Analysis Model and implement it. Study in detail working of system/Project. Identify Design classes/ Evolve Analysis Model. Use advanced relationships. Draw Design class Model using OCL and UML2.0 Notations.
	Implement the design model with a suitable object-oriented language.
6	Prepare Sequence Model. Identify at least 5 major scenarios (sequence flow) for your system.
	Draw Sequence Diagram for every scenario by using advanced notations using UML2.0
7	Prepare a State Model and implement it. Identify States and events for your system. Study state transitions and identify Guard conditions. Draw State chart diagram with advanced UML 2 notations.
	Implement the state model with a suitable object-oriented language

T.Y.B.Tech. 2018 Pattern Semester - VI Syllabus Curriculum

Professional Elective II (ITUA32181A) Machine Learning

Teaching Scheme	Examination Scheme							
Credits: 4	CIE							
Lecture (L): 3 hrs./week	CIE	ISE	SCE	ESE	PR/OR	TW	Total	
Practicals/week: 2 hrs./week								
	20	20	20	20		25	105	
	20	30	20	30	-	25	125	
Prerequisites: Linear Algebra and Ca	alculus, Pr	obability	Basics				l	
Course Objectives:								
• Understanding Human learning a	spects.							
• Understanding primitives and me	thods in le	arning pro	ocess by co	omputer.				
• Understanding nature of problem				0				
Understanding of building basic	machine le	arning mo	dels using	g Clouds.				
Course Outcomes:								
After studying this course, students will b	be able to:							
1 Communities of attaining of		1						
 Comprehend basics of statistics u Understand binary and multiclass 			•	near mod	ماد			
3. Understand regression and gener			gies and n	incar mou	C 15.			
4. Demonstrate and apply algebraic			sed model	ls				
5. Demonstrate models based on pro-		0						
6. Critically analyze and adopt the I	ML practic	es to furth	er develop	ML base	ed projects.			
Unit I– Basics Of Statistics And Int	roduction	n To Mac	hine Lea	rning				
Statistics : Descriptive Statistics, Hyp	othesis T	esting, R	egression	methods	and appli	cations,	Cluster	
analysis, Introduction to factoring and			-		-		oring.	
Introduction: What is and What is no				-		0		
applications, Training versus Testing,		0			validation.	Types o	of	
Learning: Supervised, Unsupervised a	ind Semi-S	Supervise	ed Learni	ng.				
Jnit II - Classification								
Binary and Multiclass Classification:	Assessing	Classifie	cation Per	formanc	e, Handlin	g more t	han two	
classes, Multiclass Classification-One	vs One, C	One vs R	est Linear	Models	Perceptro	on, Suppo	ort Vecto	
Machines (SVM)								
Dimensionality Reduction: Introduc	tion to Di	mensiona	lity Redu	ction, Su	bset Selec	tion		
nit III – Regression And Generaliza	ation							
Regression: Assessing performance of								
Catalysts for Overfitting, VC Dimens				-			-	
Multivariate Linear Regression, Regu		-						
Theory of Generalization: Bias and	variance	Dilemma	a, Trainin	g and Te	sting Curv	ves, Case	Study of	
Polynomial Curve Fitting.								

Unit IV - Logic Based And Algebraic Models

Distance Based Models: Neighbors and Examples, Nearest Neighbor Classification, Distance based clustering algorithms - K-means and K-medoids, Hierarchical clustering.

Rule Based Models: Rule learning for subgroup discovery, Association rules mining – Apriori Algorithm, Confidence and Support parameters.

Tree Based Models: Decision Trees, Minority Class, Impurity Measures – Gini Index and Entropy, Best Split.

Case Study on Application of algorithms (Cloud based)in industry

Unit V – Probabilistic Models

Conditional Probability, Joint Probability, Probability Density Function, Normal Distribution and its Geometric Interpretation, Naïve Bayes Classifier, Discriminative Learning with Maximum Likelihood. Probabilistic Models with Hidden variables: Expectation-Maximization methods, Gaussian Mixtures

Unit VI - Trends In Machine Learning

Ensemble Learning: Bagging, Randomization, Boosting, Stacking

Reinforcement Learning: Exploration, Exploitation, Rewards, Penalties

Deep Learning: The Neuron, Expressing Linear Perceptron as Neurons, Feed Forward Neural Networks, Linear Neurons and their Limitations, Sigmoid, Tanh and ReLU Neurons

Practical Advice for ML Projects : 7 steps for ML projects.

	 Kevin P Murphy: Machine Learning – A Probabilistic Perspective, MIT Press, August 2012. 	

	Assignments : Machine Learning Laboratory					
1	Download any open source platform for implementing the assignments and write down the Functionalities associated with it. You may choose Weka, Python, R.					
2	Implement SVM for performing classification and find out the accuracy using given data using python.					
3	Supervised Learning - Regression (Using R) Generate a proper 2-D data set of N points. Split the data set into Training Data setand Test Data set. i) Perform linear regression analysis with Least Squares Method. ii) Plot thegraphs for Training MSE and Test MSE and comment on Curve Fitting and Generalization Error.					
4	Create Association Rules for the Market Basket Analysis for the given Threshold. (Using R)					
5	Implement K-means algorithm to create cluster on the given data using python.					
6	Implement simple Naïve Bayes algorithm to calculate accuracy, TPR, FPR, TNR, Recall, Precision, error rate etc. measuring parameters on the given data by using Weka API.					
7	Implement Q-learning algorithm on the given data.					
8	Real time mini project implementation of above mentioned machine learning algorithms using cloud for any industry oriented problem.					

Professional Elective II (ITUA32181B) Information and Network Security

Teaching Scheme	Examination Scheme								
Credits: 4 Lecture (L): 3 hrs./week	CIE	ISE	SCE	ESE	PR/OR	TW	Total		
Practicals/week: 2 hrs./week									
	20	20	20	20		25	105		
	20	30	20	30	-	25	125		
Prerequisites: Mathematical concepts	like Ran	dom num	hers Nu	mber the	orv. Finite	Fields			
Course Objectives:			.0015, 1101		<i>J</i> y , r mic	, There's			
• Understand the acceptials of in	formation	accondition							
 Understand the essentials of information security Analyze the Digitals security lapses. 									
 Study and implement the cryptographic algorithm. 									
 To illustrate the concept of digital signature and digital certificate. 									
 Illustrate the need of key management 									
Learn the various massage authen		ethods.							
Course Outcomes:									
After studying this course, students will be	e able to:								
1. Understand what are the comm					-				
2. Demonstrate the principles of symmetric and asymmetric cryptography.									
3. Understand and apply the vario				ric key a	lgorithms	•			
· · · · · · · · · · · · · · · · · · ·	4. Apply the concepts of hashing and MAC with algorithms.								
5. Comprehend the concepts of digital signature and digital certificates.									
6. Design the various authentication	on metho	as.							
Unit I –Security Basics									
Introduction, Terminology, Attacks, Se									
Techniques: Substitution and Transpos			· ·		,	· ·			
Algorithms, Chinese Remainder Theor	,	rete Loga	rithm, Fe	ermat The	eorem, Bl	ock Ciph	ers,

Feedback mode, Output Feedback mode	e, Counte	r mode							

Unit III – Public Key Cryptosystems

Public Key Cryptosystems with Applications, Requirements and Cryptanalysis, RSA algorithm, its computational aspects and security, Diffie-Hillman Key Exchange algorithm, Man-in-Middle attack **Cryptographic Hash Functions**

Cryptographic Hash Functions, their applications, Simple hash functions, its requirements and security, Hash functions based on Cipher Block Chaining, Secure Hash Algorithm (SHA)

Unit IV - Message Authentication Codes

Message Authentication Codes, its requirements and security, MACs based on Hash Functions, Macs based on Block Ciphers

Digital Signature, its properties

Digital Signature, its properties, requirements and security, various digital signature schemes (Elgamal and Schnorr), NIST digital Signature algorithm

Unit V – Key management and distribution

Key management and distribution, symmetric key distribution using symmetric and asymmetric encryptions, distribution of public keys, X.509 certificates, Public key infrastructure. Remote user authentication with symmetric and asymmetric encryption, Kerberos

Unit VI - Web Security threats and approaches

Web Security threats and approaches, SSL architecture and protocol, Transport layer security, HTTPS and SSH

	1. BruiceSchneier, "Applied Cryptography- Protocols,
	Algorithms and Source code in C", 2nd Edition, Wiely India
	Pvt Ltd, ISBN 978-81-265-1368-0

	2. Cryptography & Network Security by Forouzan,
Reference Books :	Mukhopadhyay, McGrawHil
	3. Cryptography And Network Security by WilliamStallings,
	Pearson
	4. Information Security Principles and Practice by Mark Stamp

	Assignments : Information and Network Security Laboratory
1	Write program in C++ or Java to implement RSA algorithm for key generation and cipher verification
2	Develop and program in C++ or Java based on number theory such as Chinese remainder or Extended Euclidean algorithm. (Or any other to illustrate number theory for security)
3	Write program in C++ or Java to implement Diffie Hellman key exchange algorithm.
4	Write a program in C++, C# or Java to implement RSA algorithm using Libraries (API).
5	Write a program in C++, C# or Java to implement SHA-1 algorithm using Libraries (API)
6	Configure and demonstrate the use of IDS tool such as snort.
7	Configure and demonstrate use of vulnerability assessment tool such as NESSUS
8	Implement web security with Open SSL tool kit

Professional Elective II (ITUA32181C)

Multimedia Technologies

Unit II-Digital Image	-1,10						
Colour Science, Colour, Colour Model	. Colorr	nolottos	Dania Im	ago fund	amontala	imaga E	510

Colour Science, Colour, Colour Models, Colour palettes, Basic Image fundamentals, image File formats - (BMP, HEIF, TIFF, JPEG, GIF), Basic Image Processing (Case study- Photoshop), Use of

image editing software, White balance correction, Dynamic range correction, Gamma correction, Photo Retouching.

Image Compression: Types of Compression: Lossy& Lossless, Symmetrical & Asymmetrical, Intraframe &Inter-frame Hybrid JPEG, Lossless: RLE, Shannon - Fano algorithm, Arithmetic coding. Lossy: Vector quantization, Fractal Compression Technique, Transform Coding, Psycho-analysis, and inter-frame Correlation. Hybrid: JPEG-DCT.

Unit III – Audio

Nature of sound waves, characteristics of sound waves, psycho-acoustic, Digitization of sound, frequency and bandwidth, decibel system, data rate, audio file format, Sound synthesis, MIDI, Compression and transmission of audio on Internet, Audio software and hardware. Audio file formats: WAV, AIFF, VOC, AVI, MPEG Audio File formats, RMF, WMA Audio compression techniques : DM, ADPCM and MPEG

Audio file conversions Multimedia Supported audio formats in Android, Media Playback.

Unit IV -Video

Video Basics, How Video Works, Broadcast Video Standards, Analog video, Digital video, video signal formats, Video transmission standards: EDTV, CCIR, CIF, SIF, HDTV, digitization of video, video file formats: MOV, Real Video, H-261, H-263, Cinepack, Nerodigtal, video editing, DVD formats, Video Compression and File Formats. Video compression based on motion compensation, MPEG-1, MPEG-2, MPEG-4, MPEG-7, MPEG-21, video streaming Multimedia Supported video formats in Android, Media Playback.

Unit V -Animation

Animation: Basics of animation, types of animation, principles of animation, techniques of animation, Creating animation Cell Animation, Key frames, and Twinning ,Morphing and Inverse Kinematics , Animation Software , Application of Animation , Web-Based Animation , Animation for Learning , Animation Design and Usage Guidelines

Unit VI- Multimedia Communication And Multimedia application Tools

Multimedia Communication, Multimedia Communication Basics, Multimedia Network, Communications Standards, Introduction to Flash

Multimedia in Android: Android Multimedia Framework Architecture, GStreamer: Introduction, GStreamer Based Multimedia Framework, Open Core Multimedia Engine

	1. Tay Vaughan, "Multimedia making it works", Tata McGraw-Hill,

Design Interactive Systems with clear understanding of HCI principles that influence a system interface design, before writing any code. Create interfaces for different environments, people, places, and activities. Apply Quantitative Analysis, Evaluation, and Redesign. Evaluate sample interfaces using different models. Unit 1 – Introduction to Human-Computer Interaction design, what interaction design is and how relates to human-computer interaction and other fields, what is involved in the process of interaction design, the different forms of guidance used in interaction design, etc. Need for Design - Examples from Design of everyday things, case studies, Evolution of the web and digital interfaces, Design thinking and wicked problems.	Prerequisites: Software Engineering	g.						1
 computer-based systems comprehensive, friendly and usable. Understand the theoretical dimensions of human factors involved in the acceptance of computer interfaces. Understand the important aspects of implementation of human-computer interfaces. Identify the various tools and techniques for interface analysis, design, and evaluation. Identify the impact of usable interfaces in the acceptance and performance utilization of information systems. Identify the importance of working in teams and the role of each member within an interface development phase. Course Outcomes: After studying this course, students will be able to: Understand the Human-Computer Interaction and what interaction design is. Understand Human Capabilities and Core Cognitive aspects of interaction design. Design Interactive Systems with clear understanding of HCI principles that influence a system interface design, before writing any code. Create interfaces for different environments, people, places, and activities. Apply Quantitative Analysis, Evaluation, and Redesign. Evaluate sample interfaces using different models. Unit 1 – Introduction to Human-Computer Interaction Includes the difference between good and poor interaction design, what interaction design is and how relates to human-computer interaction and other fields, what is involved in the process of interaction design, the different forms of guidance used in interaction design, etc. Need for Design - Examples from Design of everyday things, case studies, Evolution of the web and digital interfaces, besign thinking and wicked problems.	Course Objectives:							
 Identify the various tools and techniques for interface analysis, design, and evaluation. Identify the impact of usable interfaces in the acceptance and performance utilization ofinformation systems. Identify the importance of working in teams and the role of each member within an interface development phase. Course Outcomes: After studying this course, students will be able to: Understand the Human-Computer Interaction and what interaction design is. Understand Human Capabilities and Core Cognitive aspects of interaction design. Design Interactive Systems with clear understanding of HCI principles that influence a system interface design, before writing any code. Create interfaces for different environments, people, places, and activities. Apply Quantitative Analysis, Evaluation, and Redesign. Evaluate sample interfaces using different models. Unit II – Understanding the Design Process

Interaction design basics, HCI in the software process, Design rules, Implementation support, Evaluation techniques, Universal design, User support, Individual differences, designing interfaces for all, User research and techniques, Understanding Personae, Good and poor design, Ergonomics. Exercise - Creating personae for different application in everyday use.

Unit III – Understanding the Interaction

Understanding device specific interactions and human aspects involved, Interaction styles, Interacting with voice, visual and audio visual interfaces, Understanding Scenarios and context of use for user. Exercise - Listing down scenarios for an application/system, critical task list for each scenario Understanding user journey and user journey maps.

Exercise - Creating a user journey map for a particular task

Interaction Styles- Direct Manipulation and Virtual Environments, Menu Selection, Form Filling and Dialog Boxes, Command and Natural Languages, Interaction Devices, Collaboration and Social Media Participation

Unit IV – Design Issues

Introduction to UX design process and case study, Understanding Information Architecture, Overview of tools.

Exercise - Open and closed card sorting technique - Creating information architecture for a system Understanding navigation models based on information architecture, High level concept sketches/wireframes.

Exercise - Creating low fidelity concept sketches for critical tasks of system/problems. Quality of Service, Balancing Function and Fashion, User Documentation and Online Help, Information Search, Information Visualization.

Unit V – UI Evaluation Techniques

What, why and when to evaluate, Design guidelines, Golden rules and heuristics, Goals of Evaluation, Evaluation criteria, Evaluation through: Expert analysis, User participation, Testing techniques - Formative and Summative testing, surveys, peer reviews and so on.

Case study - ROI on UX/HCI methodology

Unit VI – Outside the Box

Cognitive models, Goal and Task hierarchy models, Linguistic models, Physical and Device models, Design principles.

Exercise - Conduct evaluation of different sample interfaces using different models.

Introduction to Prototyping tools, Understanding how UI Interaction & Prototype Design works, UX - Industry overview.Prototyping / wire framing tool exercise: Design a small mobile app design, along with user journeys and multiple interaction touch points using Figma or Balsamiq.

Text books :2. "Designing the User Interface - Strategies for Effective Human
Computer Interaction", by Ben Shneiderman ISBN : 9788131732557 Pearson Education (2010).

	1. Usability Engineering: Scenario-Based Development of Human-Computer
	Interaction, by Rosson, M. and Carroll, J. (2002)
	2. The Essentials of Interaction Design, by Cooper, et al., Wiley Publishing (2007)
Reference	3. Usability Engineering, by Nielsen, J. Morgan Kaufmann, San Francisco, 1993.
Books :	ISBN 0-12-518406-9
DUUKS .	4. The Resonant Interface: HCI Foundations for Interaction Design, by Heim, S.,
	Addison-Wesley. (2007)
	Usability engineering: scenario-based development of human-computer
	interaction, By Rosson, M.B & Carroll, J.M., Morgan Kaufman.(2002)

	Assignments : Human Computer Interaction Laboratory
1	Design of Everyday Things: Find 3 unique usability problems in the day-to-day objects that you have observed or encountered. Describe them in 3 slides in a presentation.
2	User Research: Contextual Inquiry: In groups of two, conduct an interview with a newcomer to IIT Bombay in trying to understand their perspective on way-finding in the campus. Record the audio with the user's permission. (If the user disagrees, take notes and prepare transcripts). Try to follow as many sutras of contextual inquiry as possible.
3	One-minute audio clips / transcripts from this interview on a Google classroom. Each clip / transcript should demonstrate your understanding of one of the sutras during the interview. Name the audio file according to the sutra. In an accompanying Word/PDF document, write a short (100 word) description of each audio file / transcript and a justification of the sutra. You may embed photographs to establish the context of the interview. Don't forget to list your names.
4	User Persona: Creating personae for different application in everyday use. Develop a precise description of the user of the product in focus of the design and what the user wishes to accomplish.
5	User journey and User journey maps: Listing down scenarios for an application/system, critical task list for each scenario. Creating a user journey map for a particular task.
6	Design Process: Understanding navigation models based on information architecture, High level concept sketches/wireframes. Creating low fidelity concept sketches for critical tasks of a system/problems. Use the attached sketch sheet (take prints as required) to create wireframe
7	for your project. (Ref:- https://www.invisionapp.com/inside-design/wireframe-examples/) Prototype Design: Design a small mobile app design, along with user journeys and multiple interaction touch points using Figma or Balsamiq.
8	 Evaluation: Choose an appropriate evaluation method for each of the following situations. In each case identify: (i) the participants (ii) the technique used (iii) representative tasks to be examined (iv) measurements that would be appropriate (v) an outline plan for carrying out the evaluation. (a) You are at an early stage in the design of a spreadsheet package and you wish to test what type of icons will be easiest to learn. (b) You have a prototype for a theatre booking system to be used by potential theatre-goers to reduce queues at the box office. (c) You have designed and implemented a new game system and want to evaluate it before release. (d) You have developed a group decision support system for a solicitor's office. (e) You have been asked to develop a system to store and manage student exam results and would like to test two different designs prior to implementation or prototyping.

Professional Elective III (ITUA32182B)

Advance Operating Systems

Teaching Scheme	Examination Scheme						
Credits: 4	CIE	ISE	SCE	ESE	PR/OR	TW	Total
Lecture (L): 3 hrs./week		ISE	SCE	LOL		1 VV	10141
Practicals/week: 2 hrs./week							
	20	30	20	30		25	125
	20	50	20	50	-	23	123
Prerequisites: Computer Organizati	on and Arc	hitecture	, Fundam	entals of	Data Stru	ctures.	
Course Objectives:							
• To study the fundamentals of C							
• To understand the concept of Ir	-		cation in d	listributed	OS		
• To understand the synchronizat			20				
 To understand the resource man To study and understand the resource 							
• To study and understand the red Course Outcomes:	ent type of	advanced	OS (MOD	1005)			
course outcomes.							
After studying this course, students will	be able to:						
1. Understand the general conce	pt of OS a	nd DOS.					
2. Understand and apply inter-p			on in the	distribute	ed OS.		
3. Demonstrate the synchroniza							
4. Analyze and Comprehend the	e Memory i	managem	ent distri	buted OS	5.		
5. Demonstrate the File manage	ment distri	buted OS					
6. Study and understand the rec	ent type of	advanced	l OS (Mo	bile OS)	•		
UNIT I- Introduction To Os And I	Distributed	l Os					
A simple OS – structure, processes, a	address spa	ces and the	hreads, m	anaging	processes	, loading	programs
into processes, Basic concepts: conte	xt switchir	ng – proce	edures, th	reads, sy	stem calls	s, interrup	ots.
Distributed computing systems fundation	amentals: I	ntroduction	on to Dist	tributed of	computing	g systems	, Models,
Popularity. Distributed computing sy	stem, Desi	gn issues	of Distri	buted op	erating sy	stem, dis	tributed
computing environment.							
UNIT II- Message Passing And Re	mote Proc	edure Ca	alls				
Features of a good Message Passing	System. Iss	sues in IP	C by Me	ssage Pas	ssing Synd	chronizat	ion,
Buffering, Multi-datagram Messages							
Implementing RPC Mechanism. Stul			•		0		d Results.

Implementing RPC Mechanism. Stub Generation. RPC Messages, Marshaling Arguments and Results. Parameter Passing semantics, call semantics, Communication protocols for RPC's, Client- Server Building, Exception handling.

UNIT III- Distributed Shared Memory

General Architecture of DSM systems. Design and implementation Issues of DSM, Granularity, Structure of Shared Memory Space, Consistency models, Replacement strategy, Thrashing.

UNIT IV- Synchronization And Resource Management In Ds

Clock Synchronization. Event Ordering, Mutual Exclusion, Deadlock in the distributed systems, Election Algorithms. Resource Management: Features of global scheduling algorithm, Task assignment approach, Load-balancing and Load approach.

UNIT V-Distributed File Systems

Features of good DFS, File models, File Accessing models. File- Sharing Semantics, File-Caching schemes, File Replication, Fault Tolerance, Automatic Transactions, Design Principles

UNIT VI -Mobile Operating System

Mobile O.S.: Introduction, Kernel design in Mobile OS, Scheduling in Mobile OS, File systems on mobile phones, I/O in Mobile OS, Case study: Symbian or Android

mobile phones, 1/O m Mobile	OS, Case study: Symblan of Android

Jnit – III Big Databases							
Introduction to Big Data, NoSQL datal	base syste	em – Col	umn base	d and ke	y value ba	sed	

CURRICULUM BOOK

Column based Database (Cassandra): Architecture, Managing data, Data Caching, Tuning, Data backup, Cassandra Query Language, CQL Data Model, Indexing Key Value based Database (DynamoDB): Data Model, Operations, Data Access, Indexing.

Unit – IV Big Databases

Graph Databases (Neo4j): vGraphs are the Future, Why Data Relationships Matter, Data Modeling Basics, Data Modeling Pitfalls to Avoid, Why a Database Query Language Matters, Imperative vs. Declarative Query Languages, Graph Theory & Predictive Modeling.

Unit – IV Big Data Analytics

Introduction to data mining and analytics: Data Streams mining, Stream data management systems: Issues and solutions, Stream frequent pattern analysis, Stream classification, Stream cluster analysis, Graph based database, graph mining, Methods for Mining Frequent Sub graphs Mining Variant and Constrained Substructure Patterns, Social Network Analysis, Models of social network generation, mining on social network, Apache Flume NG – Microsoft StreamInsight as tools for Complex Event Processing (CEP) applications.

Unit – VI Current Trends In Advanced Databases

Deductive Databases: Introduction, Semantics, Fix point operator, Safe data log programmers, Least Model, Least fixed point, Query Processing, Query Evaluation, Prototypes, and Deductive Vs RDBMS. Multimedia Database, Cloud Databases, Spatial Databases, Temporal Databases.

Transmould D ata	base, Cloud Databases, Spatial Databases, Temporal Databases.

	Assignments : Advance Database Management System Laboratory
1	Study and Configure Hadoop for Big Data.
2	Study of NoSQL Databases such as Hive/Hbase/Cassendra/DynamoDB.
3	Design Data Model using NoSQL Databases such as Hive/Hbase/Cassendra/DynamoDB.
4	Implement any one Partitioning technique in Parallel Databases.
5	Implement Two Phase commit protocol in Distributed Databases.
6	Design Persistent Objects using JDO and implement min 10 queries on objects using JDOQL in ObjectDB NOSQL DATABASE
7	Create XML, XML schemas, DTD for any database application and implement min 10 queries using XQuery FLOWR expression and XPath.
8	Design database schemas and implement min 10 queries using Hive/ Hbase/ Cassendra column based databases
9	Design database schemas and implement min 10 queries using DynamoDBkeyValue based databases
10	Implement any one machine learning algorithm for classification / clustering task in BIG data Analytics.
11	Design and Implement social web mining application using NoSQL databases, machine learning algorithm, Hadoop and Java/.Net.
	 Instructor should maintain progress report of mini project throughout the semester from project group and assign marks as a part of the term work. Instructor should frame Practical Assignments based on above mentioned list of assignments. Submission of each Practical Assignment should be in the form of handwritten write-ups/ printout of source code and output. Instructor should assign an assignment no. 11 to a group of 3 - 4 students. Practical Examination will be based on the all topics covered and questions will be asked to judge understanding of practical performed at the time of practical examination Group of students should submit the Report for assignment no. 12 which will be consist of Title of the Project, Abstract, Introduction, scope, Requirements, Data Modeling , Database design, Algorithms, Graphical User Interface, Source Code, Testing document, Conclusion. All the assignments should be conducted on Latest version of Open Source Operating Systems, toolsand Multi-core CPU supporting Virtualization and Multi-Threading.

problem, Job Sequencing.

BansilalRamnathAgarwal Charitable Trust's Vishwakarma Institute of Information Technology, Pune-48 (An Autonomous Institute affiliated to Savitribai Phule Pune University) Department of Information Technology

Unit III – Dynamic Programming

General strategy, Principle of optimality, Warshal's and Floyd's Algorithm , Optimal Binary Search Trees,

0/1 knapsack Problem, Travelling Salesman Problem, multistage GraphProblem, longest common subsequence.

Unit IV - Backtracking

General method, Recursive backtracking algorithm, iterative backtracking method. 8- queens problem, Sum of subsets, Graph coloring, Hamiltonian Cycle , 0/1 Knapsack Problem

Unit V – Branch and Bound

The method, Control abstractions for Least Cost Search, Bounding, FIFO branch and bound, LC branch

and bound, 0/1 Knapsack problem – LC branch and bound and FIFO branch and bound solution, Traveling sales person problem.

Unit VI - Computational Complexities and Parallel Algorithms

Non Deterministic algorithms, The classes P, NP, NP Complete, NP hard Proofs for NP Complete Problems: Clique, Vertex Cover

Parallel Algorithms: Introduction, models for parallel computing, computing with complete binary tree, Pointer doubling algorithm

Text books :	 Horowitz and Sahani, "Fundamentals of computer Algorithms", Galgotia. ISBN 81- 7371-612-9.

AnanyLevitin, "Introduction to the Design & Analysis of Algorithm ",Pearson ISBN 81- 7758-835-4 Gilles Brassard, Paul Bratle "Fundamentals of Algorithms ", Pearson ISBN 978-81- 317-1244-3 George T. Heineman, Gary Pollice, Stanley Selkow "Algorithms in a Nutshell, A Desktop Quick Reference", O'Reilly, ISBN 13:978-81-8404-608-3

	Assignments : Design of Algorithms Laboratory
1	Write a program to implement matrix multiplication using Strassen's method. (Divide and Conquer).
2	Implement program to find minimum and maximum element from given list using Divide and Conquer.
3	Write a program to implement optimal storage tape using greedy approach.
4	Write a program to implement longest common subsequence (Dynamic Programming) and verify the complexity.
5	Write a program to print shortest path and cost for the directed graph using Bellman Ford algorithm (Dynamic Programming) and verify the complexity.
6	Write a recursive program to find the solution of placing n queens on chess board so that no queen takes each other (backtracking).
7	Write a non-recursive program to check whether Hamiltonian path exists in undirected graph or not. If exists print it. (backtracking).
8	Write a program to solve the travelling salesman problem. Print the path and the cost. (Branch and Bound).

nit III – Introduction To Compiler	·s						
hase structure of Compiler and entire exical Analyzer: The Role of the Lex		yzer, Inp	ut Buffer				

LEX: LEX Specification, Generation of Lexical Analyzer by LEX.

Unit IV - Parsers

Role of parsers, Classification of Parsers: Top down parsers- recursive descent parser and predictive parser (LL parser), Bottom up Parsers – Shift Reduce parser, LR parser. YACC specification and Automatic construction of Parser (YACC).

Unit V – Semantic Analysis And Storage Allocation

Need, Syntax Directed Translation, Syntax Directed Definitions, Translation of assignment Statements, iterative statements, Boolean expressions, conditional statements, Type Checking and Type conversion. Intermediate Code Formats: Postfix notation, Parse and syntax tress, Three address code, quadruples and triples.

Storage Allocation: Storage organization and allocation strategies.

Unit VI - Code Generation And Optimization

Code Generation: Code generation Issues. Basic blocks and flow graphs, A Simple Code Generator. Code Optimization: Machine Independent: Peephole optimizations: Common Sub-expression elimination, Removing of loop invariants, Induction variables and Reduction in strengths, use of machine idioms, Dynamic Programming Code Generation.

Machine dependent Issues: Assignment and use of registers

context of each type.							

Unit III – Electronics Processing System in Automotive

Interfacing electronics: Operational amplifier circuits, Instrumentation amplifiers, Comparators. Level shifting, Wave-shaping, Filters. Noise mechanisms and reduction.

Electronics control unit: Automotive processors and OS, typical design consideration of ECU

Unit IV - Automotive Control Systems

Control system approach in Automotive: Analog and Digital control methods. Cruise control, traction control, actuator limiting, wind-up, gain scheduling, adaptive control.

Special Control Schemes: Vehicle braking fundamentals, Antilock systems, Variable assist steering and steering control, Controls for Lighting, Wipers, Air-conditions/Heating, Remote keyless Entry and Anti-theft System. Spark Ignition and Compression Ignition Engines and their electronic controls.

Engine management testing: Engine management system strategies and implementation, Simulation and implementation methods.

Unit V – Automotive Communication Systems

Communication interface with ECUs: Interfacing techniques and interfacing with infotainment gadgets. Automotive Buses: Use of various buses such as CAN, LIN, Flexural, Recent trends in automotive buses (Such as OBDII, MOST, IE, IELLI, D2B, and DSI: Only Comparative study). **Application of Telematics in Automotive:** Global Positioning Systems (GPS) and General Packet Radio Service (GPRS), for use in an automotive environment.

Unit VI - Diagnostics and Safety in Automotive

Fundamentals of Diagnostics: Basic wiring system and Multiplex wiring system. Preliminary checks and adjustments. Self-Diagnostic system. Fault finding and corrective measures. Electronic transmission checks and Diagnosis. Diagnostic procedures and sequence. On board and off board diagnostics in Automotive. **Safety in Automotive:** Safety norms and standards. Passenger comfort and security systems. Electromagnetic environment and Automotive EMC Standards. SAE and IEEE Standards.

Open Elective-I (IOEUA32185C) Industrial Engineering

Teaching Scheme		E	xaminati	on Scher	ne		
Credits: 3 Lecture (L): 3 hrs./week	CIE	ISE	SCE	ESE	PR/OR	TW	Total
	20	30	20	30	_	-	100

Prerequisites : NA

Course Objectives:

- To introduce the concepts, principles and framework of contents of Industrial Engineering.
- To acquaint the students with various productivity enhancement techniques.
- To acquaint the students with different aspects of Production Planning and Control and Facility Design.
- To introduce the concepts of various cost accounting and financial management practices as applied in industries
- To acquaint the students with different aspects of Human Resource activities and Industrial Safety rules.
- To acquaint students with different aspect of simulation modeling for various industrial engineering\applications.

Course Outcomes:

After studying this course, students will be able to:

- 1. Compute the partial productivity and total productivity indexes considering different influencing factors
- 2. Analyse each operation with a view to eliminate unnecessary operations, avoidable delays and other forms of waste.
- 3. Compute the standard time for a qualified worker to carry out a specified job at a defined level of performance.
- 4. Design a physical arrangement of facilities most economically at optimum plant location.
- 5. Design the production system considering an estimate of future event through past data.
- 6. Calculate optimum inventory level by establishing the relationship among the factors affecting profit.

Unit I – Introduction to Industrial Engineering and Productivity

Definition and Role of Industrial Engineering, Types of production systems and organization structure, Functions of management. Measurement of productivity: Factors affecting the productivity, Productivity Models and Index (Numerical), Productivity improvement techniques.

UNIT II - Methods Study

Work Study: Definition, objective and scope of work-study, Human factors in work-study. **Method Study:** Definition, objective and scope of method study, work content, activity recording and exam aids.

Charts to record movements: Operation process charts, flow process charts, travel chart, two-handed chart and multiple activity charts.

Principles of Motion Economy: Classification of movements, SIMO chart, and micro motion study. Definition and installation of the improved method, brief concept about synthetic motion studies. Introduction to Value Engineering and Value Analysis.

Unit III – Work System Design

Work Measurements: Definition, objectives and uses, Work measurement techniques. **Work Sampling:** Need, confidence levels, sample size determinations, random observation, conducting study with the simple problems.

Time Study: Definition, time study equipment, selection of job, steps in time study. Breaking jobs into elements, recording information, Rating and standard rating, standard performance, scales of rating, factors affecting rate of working, allowances and standard time determination.

Introduction to PMTS, MTMand MOST.

Unit IV - Production Planning and Control

Introduction: Types of production systems, Need and functions of PPC, Aggregate production planning. Capacity Planning, ERP: Modules, Master Production Schedule, MRP and MRP-II. **Forecasting Techniques**: Causal and time series models, moving average, exponential smoothing, trend and seasonality (Numerical), Demand Control strategies (MTO, MTA, MTS). **Introduction to Supply Chain Management:** Basic terminologies.

Unit V – Facility Design

Plant Location: Need and factors influencing plant location, Plant Layout: Objectives, principles, types of plant layouts.

Introduction to Assembly Line Balancing and Layout parameters to evaluate.

Material Handling systems: Objectives, relation with plant layout, principles. Types and purpose of different material handling equipment, Selection of material handling equipment.

Inventory control and Management: Types of inventories, Need of inventories, terminology, costs, Inventory Models: Basic production models, (with and without shortage and discount), ABC, VED Analysis.

Unit VI - Engineering Economy, Human Resource and Industrial Safety

Introduction to Costing: Elements of Cost, Break-Even Analysis (Numerical). Introduction to Debit and Credit Note, Financial Statements (Profit and loss account and Balance Sheet), Techniques for Evaluation of capital investments.

Human Resource Development: Functions: Manpower Planning, Recruitment, Selection, Training. Concept of KRA (Key Result Areas), Performance Appraisal (Self, Superior, Peer, 360°). Industrial Safety: Safety Organization, Safety Program.

Text books :	 M Mahajan, Industrial Engineering and Production Management, Dhanpat Rai and Co. O. P. -supervised, Network training using supervised training					
gorithm or gradient descent algorithm (mathematic	ning algor	thms – St			ration

using conjugate gradient, resilient back propagation, Broydan-Fletcher-Goldfarb-Shanno algorithm, One step secant algorithm, Levernberg-Marquardt algorithm.

Unit IV - Important Aspects of ANN design

Network architecture- inputs, outputs, number of hidden layers, number of hidden neurons, stopping criteria, overfitting, validation, testing, De-normalization, Evaluating model performance, data division, performance function

Unit V – Types of ANN

Recurrent networks, Radial basis function networks, Generalized regression neural networks, Selforganizing maps (discuss using case studies of each referring to published papers and literature).

Unit VI - Applications of Feed Forward Back Propagation Neural Networks

Time series (univariate and multivariate) models, cause-effect models, Applications in Civil engineering, Electronics and Telecommunications, Mechanical Engineering, Computer Engineering, design, train and test simple 2 or 3 layered feed forward back propagation ANN for time series and cause effect models. Image Classifications using ANN.

Continuous Evaluation

- 1. Calculation of network output for any given ANN with sigmoidal, hyperbolic tangent and linear activation functions
- 2. Implementing standard backpropagation algorithm manually, Using WEKA or any other software
- 3. Designing, training, and testing 2-3 layered FFBP ANN using standard backpropagation algorithm for any time series problem (univariate)
- 4. Evaluating the performance of ANN developed in Experiment 3 by varying number of hidden neurons, activation functions, normalization ranges
- 5. Designing, training, and testing 2-3 layered FFBP ANN using standard backpropagation algorithm for any time series problem (multi-variate)
- 6. Evaluating the performance of ANN developed in Experiment 5 by varying number of hidden neurons, activation functions, normalization ranges
- 7. Designing, training, and testing 2-3 layered FFBP ANN using standard backpropagation algorithm for any cause effect problem
- 8. Evaluating the performance of ANN developed in Experiment 7 by varying number of hidden neurons, activation functions, normalization ranges
- 9. Demonstration of MNIST digit classification using ANN.

Open Elective-I (IOEUA32185E) Social Media Analytics

Teaching Scheme	Examination Scheme						
Credits: 3 CIE ISE SCE ESE PR/OP TW Total							
ecture (L): 3 hrs./week							
20 30 20 30 100							
Prerequisites : NA							
Course Objectives:							
 To understand foundations of Soci To Visualize and understand the d 		•		otworka			
 To Visualize and understand the d To solve mining problems by diffe 			n social n	etworks.			
 To solve mining problems by different algorithms. To understand network measures for social data. 							
 To understand behavioral part of web applications for Analysis. 							
 To analyze the data available on any social media applications. 							
Course Outcomes:							
 Understand the basics of Social M Understand the visualization of so Demonstrate the algorithms used f Evaluate the performance of centra Explain Behavior Analytics techni Apply social media analytics for F Unit I – Introduction To Social Media A 	cial netwo or text mi ality meas ques used acebook,	orks and th ning. ures on so for socia LinkedIn	ocial graph l media da and Twitte	n. ita. er kind of	application		media.
Social media landscape, Need for SMA	A; SMA in	n Small o	organizati	ons; SM	A in large	organiza	tions;
Application of SMA in different areas,			-				
The foundation for analytics, Social me							
social media channels, Estimated Data	sources a	ind Factu	al Data S	ources, I	ublic and	Private	data, data
gathering in social media analytics		T / T 7 ·					
UNIT II - The Social Networks Perspec							
The social networks perspective - node methods. Graphs and Matrices- Basic r A Taxonomy of Visualization, The con	neasures	for indiv	iduals and	d networ	ks.		

Unit III – Text Mining In Social Networks

Introduction, Keyword search, Classification Algorithms, Clustering Algorithms-Greedy Clustering, Hierarchical clustering, k-means clustering, Transfer Learning in heterogeneous Networks, Sampling of online social networks, Comparison of different algorithms used for mining, tools for text mining.

Unit IV - Network Measures Centrality: Degree Centrality, Eigenvector Centrality, Katz Centrality, PageRank, Betweenness Centrality, Closeness Centrality, Group Centrality, Transitivity and Reciprocity, Balance and Status, Similarity: Structural Equivalence, Regular Equivalence Unit V – Behavior Analytics Individual Behavior: Individual Behavior Analysis, Individual Behavior Modeling, Individual Behavior Prediction Collective Behavior: Collective Behavior Analysis, Collective Behavior Modeling, **Collective Behavior Prediction** Unit VI - Case Study Mining Twitter: Overview, Exploring Twitter's API, Analyzing 140 Characters Mining Facebook: Overview, Exploring Facebook's Social Graph API's, Analyzing Social Graph Connections. Mining Linked In: Overview, Exploring Linked In API 1. Reza Zafarani Mohammad Ali Abbasi Huan Liu, Social Media Mining, Cambridge University Press, ISBN: 10: 1107018854. 2. Charu C. Aggarwal, Social Network Data Analytics, Springer, ISBN: 978-1-4419-Text books : 8461-6. 3. Matthew Ganis, Avinash Kohirkar Social Media Analytics: Techniques and Insights for Extracting Business Value Out of Social Media, Pearson publications, 2016 Marshall Sponder, Social Media Analytics: Effective Tools for Building, Interpreting, 1. and Using Metrics, McGraw Hill Education, 978-0-07-176829-0. 2. 2. Matthew A. Russell, Mining the Social Web, O'Reilly, 2nd Edition, ISBN:10: 1449367615. Reference 3. Course Objectives :							
• To learn how to employ Integrated		ment Envi	ronment(IDE) for in	mplementi	ng and tes	sting of
 software solution in android devel To acquire contemporary skills to 	-	students e	mployabl	e in inforn	nation tech	nology de	omain
Course Outcomes :		students e	mpioyuon			linology u	Jinam
After studying this course, students will be able to:							
1. Understand Android activities life cycle.							
 Demonstrate operations on GUI objects. 							
3. Perform & evaluate Event driven programming.							
4. Apply various techniques on working with menu.							
Unit I: Introduction to Android:							
Overview of Android: What does Android run On – Android Internals? Android for mobile apps							
development Environment setup for Android apps Development Framework - Android- SDK, Eclipse							
Emulators – What is an emulator Android AVD? Android Emulation – Creation and set up First							
Android Application							
Unit II: Android Activities and GUI Design Concepts							
Design criteria for Android Application							
Android application, Intent, Activity, Activity Lifecycle and Manifest Creating Application and new							
Activities Simple UI -Layouts and Layout properties :Introduction to Android UI Design, Introducing							
Layouts XML Introduction to GUI objects viz.: Push Button, Text / Labels, EditText, ToggleButton, Padding							
Unit III: Advanced UI Programming							
Event driven Programming in Android	(Text Ed	lit Buttor	clicked	etc) Acti	ivity I ife	vele of a	Android
		in, Dunoi	i chekeu		LILLY LILL		muiolu
Unit IV: Toast, Menu, Dialog, List and	Adapters						

Menu: Basics, Custom v/s System Menus, Create and Use Handset menu Button (Hardware) Dialog : Creating and Altering Dialogs , Toast : List & Adapters Demo Application Development and Launching Basic operation of SQLite Database 5.6 Android Application Priorities

BansilalRamnathAgarwal Charitable Trust's Vishwakarma Institute of Information Technology, Pune-48 (An Autonomous Institute affiliated to Savitribai Phule Pune University) Department of Information Technology

	Assignments : Employability Skill(Mobile Application Development) Laboratory
1	Installation and setup of java development kit(JDK), setup android SDK, setup eclipse IDE, setup android development tools (ADT) plugins, create android virtual device.
2	Create "Hello World" application. That will display "Hello World" in the middle of the screen using TextView Widget in the red color
3	Create application for demonstration of android activity life cycle 2 Create Registration page to demonstration of Basic widgets available in android.
4	Create sample application with login module.(Check username and password) On successful login, Chnage TextView "Login Sucessful". And on failing login, alert user using Toast "Login fail"
5	Create login application where you will have to validate usename and passwords Till the username and password is not validated , login button should remain disabled.
6	Create and Login application as above. Validate login data and display Error to user using setError() method. Create an application for demonstration of Relative and Table Layout in android.
7	Create an application for demonstration of Scroll view in android 2 Create an application for demonstration of Explicitly Starting New Activity using Intent.
8	Create an application that will pass two number using TextView to the next screen , and on the next screen display sum of that number.
9	Create spinner with strings taken from resource folder (res >> value folder). On changing spinner value, change background of screen.
10	Create an application that will get the Text Entered in Edit Text and display that Text using toast (Message).
11	Create an application that will Demonstrate Button onClick() Event and change the TextView Color based on button Clicked.
12	Create an UI such that, one screen have list of all the types of cars. On selecting of any car name, next screen should show Car details like: name, launched date, company name.
13	Create an application that will Demonstrate Dialog Box Control In Android 4
