PAPER CODE | V 213 - 234 (RE)

December 2023 (REEXAM)

SY B.TECH (SEMESTER - I)

COURSE NAME: FUNDAMENTALS	Branch: COMPUTER	COURSE CODE:		
OF DATA STRUCTURE	ENGINEERING	CSUA21204		
(Tale Marinary AAAA)				

(PATTERN 2020)

Time: [2 Hrs]

[Max. Marks: 60]

Instructions to candidates:

- 1) Figures to the right indicate full marks.
- 2) Use of scientific calculator is allowed
- 3) Use suitable data wherever required
- 4) All questions are compulsory. Solve any two sub questions each from each Question 1,2, 3,4,5,and 6 respectively

Q. No.	Question Description	Max. Marks	CO mapped	BT Level
Q.1	a) What is frequency count method? Explain with example.	[5]	1	Understand
-	b) Differentiate between interpreter and compiler.	[5]	1	Understand
	c) Explain the Array and Pointer in detail.	[5]	1	Understand
Q2	a) Explain Sparse matrix Addition and subtraction with suitable example.	[5]	2	Understand
a manage of the control of the contr	b) What is Row Major and column major? Explain the address calculation with example.	[5]	2	Understand
	c) Explain the fast transpose of sparse matrix with suitable example.	[5]	2	Understand
Q3.	a) Apply your understanding of sequential and linked organizations to describe how each approach manages memory. Discuss a real-world scenario where one organization would be more advantageous than the other based on memory considerations.	[5]	3	Apply
	b) Apply your knowledge to design an algorithm for efficiently deleting a node from a specified position in a circular linked list. Discuss any unique considerations for deletion in a circular context.	[5]	3	Apply
	c) Apply the principles of an Abstract Data Type (ADT) to design a linked list class in a programming language.	[5]	3	Apply

Q.4 a) Illustrate using stack operations for converting the following athematic equation (A-B)*(D/E. b) Illustrate stepwise stack contents for converting the following infix notation to postfix notation. ((7-(5+3)) / (9+(6/3))^3. Support your answer with appropriate pseudo code. c) Evaluate the following postfix expression. Show all steps: a b * c - d + e + where a=9, b=3, c=6, d=4 and e=8		Ensure that the class allows for creating the list, inserting at any position, and deleting from any position.			
the following infix notation to postfix notation. ((7-(5-3)) / (9+(6/3))^3. Support your answer with appropriate pseudo code. c) Evaluate the following postfix expression. Show all steps: a b * c - d + e + where a=9, b=3, c=6, d=4 and e=8 Q.5 a) Apply Priority queue for scheduling the CPU in Operating System and demonstrate it with proper example. b) By Applying circular queue with array size of 5, Perform the following operations on this queue and show the sequence of steps with necessary diagrams indicating values of front, rear and contents of queue: i. insert 50 ii. insert 70 iii. insert 70 iii. insert 80 vi. delete an element vii. delete an element viii. delete an element viii. delete an element viiii. insert 90 c) Simulate 'School admission Process' using Queue along with overflow and underflow condition. Provide required justification with suitable Java constructs. Analyze the time complexity of this	Q	a) Illustrate using stack operations for converting the	[5]	4	Evalua
all steps: a b * c - d + e + where a=9, b=3, c=6, d=4 and e=8 Q.5 a) Apply Priority queue for scheduling the CPU in Operating System and demonstrate it with proper example. b) By Applying circular queue with array size of 5, Perform the following operations on this queue and show the sequence of steps with necessary diagrams indicating values of front, rear and contents of queue: i. insert 50 ii. insert 70 iii. insert 30 iv. delete an element vii. delete an element viii. delete an element viii. insert 90 c) Simulate 'School admission Process' using Queue along with overflow and underflow condition. Provide required justification with suitable Java constructs. Analyze the time complexity of this		the following infix notation to postfix notation. ((7-(5+3)) / (9+(6/3))^3. Support your answer with	[5]	4	Evalua
Operating System and demonstrate it with proper example. b) By Applying circular queue with array size of 5, Perform the following operations on this queue and show the sequence of steps with necessary diagrams indicating values of front, rear and contents of queue: i. insert 50 ii. insert 70 iii. insert 30 iv. delete an element vii. delete an element viii. delete an element viii. insert 90 c) Simulate 'School admission Process' using Queue along with overflow and underflow condition. Provide required justification with suitable Java constructs. Analyze the time complexity of this		all steps: a b * c - d + e + where a=9, b=3, c=6, d=4	[5]	4	Evalua
Perform the following operations on this queue and show the sequence of steps with necessary diagrams indicating values of front, rear and contents of queue: i. insert 50 ii. insert 70 iii. insert 30 iv. delete an element viii. delete an element viii. delete an element viiii. insert 90 c) Simulate 'School admission Process' using Queue along with overflow and underflow condition. Provide required justification with suitable Java constructs. Analyze the time complexity of this	Q	Operating System and demonstrate it with proper	[5]	5	Apply
Perform the following operations on this queue and show the sequence of steps with necessary diagrams indicating values of front, rear and contents of queue: i. insert 50 ii. insert 70 iii. insert 30 iv. delete an element vii. delete an element viii. delete an element viii. insert 90 c) Simulate 'School admission Process' using Queue along with overflow and underflow condition. Provide required justification with suitable Java constructs. Analyze the time complexity of this		b) By Applying circular queue with array size of 5,	[]		A 1
diagrams indicating values of front, rear and contents of queue: i. insert 50 ii. insert 70 iii. insert 30 iv. delete an element vi. insert 80 vi. delete an element viii. delete an element viii. insert 90 c) Simulate 'School admission Process' using Queue along with overflow and underflow condition. Provide required justification with suitable Java constructs. Analyze the time complexity of this		Perform the following operations on this queue and	[5]	5	Apply
contents of queue: i. insert 50 ii. insert 70 iii. insert 30 iv. delete an element v. insert 80 vi. delete an element vii. delete an element viii. insert 90 c) Simulate 'School admission Process' using Queue along with overflow and underflow condition. Provide required justification with suitable Java constructs. Analyze the time complexity of this		show the sequence of steps with necessary			· ·
i. insert 50 ii. insert 70 iii. insert 30 iv. delete an element v. insert 80 vi. delete an element vii. delete an element viii. insert 90 c) Simulate 'School admission Process' using Queue along with overflow and underflow condition. Provide required justification with suitable Java constructs. Analyze the time complexity of this		diagrams indicating values of front, rear and			
ii. insert 70 iii. insert 30 iv. delete an element vi. insert 80 vi. delete an element vii. delete an element viii. insert 90 c) Simulate 'School admission Process' using Queue along with overflow and underflow condition. Provide required justification with suitable Java constructs. Analyze the time complexity of this	200	contents of queue:			
iii. insert 30 iv. delete an element vi. insert 80 vi. delete an element vii. delete an element viii. insert 90 c) Simulate 'School admission Process' using Queue along with overflow and underflow condition. Provide required justification with suitable Java constructs. Analyze the time complexity of this		i. insert 50			
iv. delete an element vi. insert 80 vi. delete an element vii. delete an element viii. insert 90 c) Simulate 'School admission Process' using Queue along with overflow and underflow condition. Provide required justification with suitable Java constructs. Analyze the time complexity of this		ii. insert 70			
vi. delete an element vii. delete an element viii. insert 90 c) Simulate 'School admission Process' using Queue along with overflow and underflow condition. Provide required justification with suitable Java constructs. Analyze the time complexity of this		iii. insert 30			
vi. delete an element vii. delete an element viii. insert 90 c) Simulate 'School admission Process' using Queue along with overflow and underflow condition. Provide required justification with suitable Java constructs. Analyze the time complexity of this		iv. delete an element			
vii. delete an element viii. insert 90 c) Simulate 'School admission Process' using Queue along with overflow and underflow condition. Provide required justification with suitable Java constructs. Analyze the time complexity of this		insert 80			
c) Simulate 'School admission Process' using Queue along with overflow and underflow condition. Provide required justification with suitable Java constructs. Analyze the time complexity of this		vi. delete an element			
c) Simulate 'School admission Process' using Queue along with overflow and underflow condition. Provide required justification with suitable Java constructs. Analyze the time complexity of this		vii. delete an element			
along with overflow and underflow condition. Provide required justification with suitable Java constructs. Analyze the time complexity of this		viii. insert 90			
		along with overflow and underflow condition. Provide required justification with suitable Java constructs. Analyze the time complexity of this	[5]	5	Apply

Q.6)	a) Apply Bubble sort algorithm on the following	[5]	6	Apply
	payment receipt numbers and demonstrating list			
	after every pass. Receipt Numbers: [1563, 1524,			
	1511, 1521, 1510]			
	b) Apply suitable search algorithm to find the index			
	of the bill numbers 8917 in the following sorted list	[5]	6	Apply
	of bill numbers: 8901, 8904, 8908, 8912, 8917,			
	8922, 8926, 8931, 8936, and 8940. Provide step-			
	by-step details of the search process.			
-	c) The keys 15, 12, 18, 5, 2, 17, 3 and 25 are			
	inserted into an initially empty hash table of length	[5]	6	Apply
	10 using open addressing with hash function			11.3
	h(k) = k mod 10 and linear probing. Stepwise show			
	the contents of the hash table after insertion of			
	every key	1	,
